I appreciate the problem, I inhale the k2gys node close to full
quieting because he's only abt ten miles away. I hear bits & pieces of
w3frc which is abt 25 miles away. Because I only have a 19" coathanger
whip glomed onto an old iron radiator in the room here for a 2m
"antenna". This nonsense is obviously fixable with a bit of effort on
both our parts.

> It's
> useful for DX'ing, but doesn't provide typical PBBS services I'm used to from
> the old days.

See following.

> I would need a very reliable band opening to get into any of
> those other nodes.

Utility-level ham digital comms like 2m packet will never get anywhere
if ya gotta "go dxing" for openings to access the nodes to get plugged
in. Put up a 15 foot glass stick and stand back.

>
> >Are local work & the DX clusters bad things? Whatta ya want outta two
> >meters?
>
> No, they're not bad things -- but I want to be able to send/receive general
> packet message traffic, NTS traffic, and BBS type messages the way I used to be
> able to on the local MSYS BBS's.

My primary point throughout this thread has been that 2m packet as a
mode from the technical and operational standpoints is still very much
alive and doing quite well despite the fact that it's not the huge
buzz it was 10-20 years back. To the extent that, as you put it, it's
not even on most ham's screens any longer. Depending on the definition
of "most hams".

With the capability and infrastucture obviously still in place it's upon the users and user groups to make use of packet or not. I submit that what I perceive as your complaint with 2m packet as a mode is invalid, your complaint lies with the apparent lack of users who share your thinking. Us dxers are there, it's on you and/or like-minded souls to convince the NTS types and BBSers to climb back in. Nobody owns no packet freqs, this is ham radio.

>
> >And by the way, it's not so "local", a packet sent from Virginia pops
> >up on screens all over New England within seconds.
>
> Yeah, but it's just a DX spotter's report.
>
For the most part yes, but there are still a lot of chat-room type exchanges runing thru the clusters. Including some RRAP-style rants and broadsides.

Fact is that 2m packet has survived nicely *only* because it's the one mode (or whatever ya wanna call it) which beats the Internet hands-down for dxer's specialized purposes, specifically for the spots. Spots only have value if available onscreen in something close to real time and only on a regional basis where all or most of the users are dealing with the same HF propagation condx.

The Internet "spots nets" draw time-delayed irrelevant spots like barnyards draw flies, they've been tested any number of times vs. packet and they've come up beyond useless given current technologies and economics. Thus 2m packet lives on.

I could support that...with the output power limited to 10 watts or less.
Sort of like putting a governor on the engine.

It's not a "morse free license".

See:

http://www.rsgb.org/foundation/questionsandanswers.htm

for details of the "Morse assessment" used with the Foundation licence.

Reminds me of the time you created a scenario where only Morse Code
could save your victim. You would probably opt to die in real life
than accept effective amateur radio communications via repeater-talkie
from a "shack on his hip" no-coder.

Daughters? No thanks. You keep on dealing with them.

At least the grandchildren have someone elses last name (at least I hope they do).

Right. A much better idea came along for only a few bucks a month for
a connection to the whole planet and ya doan have have to wait until
the wee hours to make the connection. Or pay for & maintain the
infrastructure. The results were as predictable as the tides.

> Now we have APRS. That burps out and tells the world about the wx and
> someones location.

I need somebody to explain to me what the attraction to APRS is about.
I don't get it.

> And a DX Packet cluster that takes three nodes to get to.

Ya got my curiosity up with that one. What's with the cluster being
three nodes away?? What nodes? How do ya do that?? Tongue-in-cheek
perhaps?

>
> Thats it. Ive been running a beacon for a week. No replies at all.
> Pathetic.

Side issue along these lines: 2m 'simplex' ssb seems to be gathering
some interest & activity hereabouts. No worn-out old machine
"politics", no idiotic roger beeps, no waiting in line to get on the
freq, no hyperfrenetic timers, 3Khz total bandwidth per qso/group
(Read: very spectrally efficient), freqs do not require the
"approval" of some ordained neighborhood committee of radio cops,
likewise "channel spacing", ssb has much longer "legs" than FM has. Ad
nauseam.

SSB blew HF FM off the ham bands back in dinosaur days.

History repeats itself.

Figger it.

Dick, just because I advocate the complete removal of a Morse Code
exam from licensing requirements doesn't mean that I didn't learn the
code. And I'll take the chance that I'll never encounter your one in
a billion situation.

Meanwhile, guys like you constantly quipping, "Can't remember where I
put my microphone," are more likely to screw up when it comes to real
emergency comms.

Because you just don't get it.

Well, there ya go again, or should I say Still? Clueless to the bitter end, that's our boy Slim.
Show where I ever said any such thing about my microphone, on the other hand all I ever had to say about CW is that
it provides one more mode to hams, one which is easier to implement under austere conditions, and which is well

known to be of much greater efficiency than any of your esteemed voice modes- which I am more than well equipped to
use as well.
Your attempts to belittle anyone who knows how to use CW and advocates its use are well documented right here -
somehow you feel its justified to transfer blame for your own personal mshortcomings to someone else, anyone else,
everyone else. You have nothing to hide because you exposed it all long ago, right here.

Women for me, thanks, as long as:

(1) ...they're old enough to vote

(2) ...they're too young for Medicare

(3) ...they have a spontaneous pulse and respirations

Everything else is negotiable, English prefered but not required.
Licensed Amateurs or Pilots given preference.

I have no idea what the 'attraction' is for APRS. Obviously someone likes
it a lot. It is going 24/7 here.

What I mean by 3 nodes away.,.. is packet termonology. A node is basically
a digi repeater thingy...hi. My DX Cluster is in Huntsville. About 100
miles to my north. To access it I must go via Gadsden, to Birmingham, to
Hunstville. 3 Nodes.

Of course SSB will whip FM butts in the long haul catagory. But for
channalized style of operation FM is clearly the winner.

I enjoy weak signal work at V/Uhf and I do it with SSB/CW/Digital. Not FM.

> using the bands and repeaters we have?

I think a start would be for some manufacturers to make 144,222,440 tribander HT's instead of 6 meters. We might find people actually using the band then. It's a matter of making things a little easier for 222's use. I'm not about to go out and buy a single frequency 222 mHz unit, but I would buy a tribander with it before I would buy a tribander that had 6 meters.

I did notice one tribander that had that feature. That's a good start. Once people have it on their ht's, they might think about building a repeater on that band.

Following courtesy of N0AX, from the CQ-Contest reflector.

Some of you have expressed an interest in increasing your CW speed, and this is the weekend to do it. The annual ARRL CW Sweepstakes runs from 2100Z on Saturday to 0300Z Monday (Sunday evening) on 80 through 10 meters (not on 30, 17, or 12-meters). While you might recoil in horror at the high code speeds, tune wayyyyyyy up in the bands and there will be some folks going nice and slow. The Novice bands on 80, 40, 15, and 10 meters often have a number of slow-speed stations hanging out up there. Don't be afraid to jump in there and give 'em a call. I *guarantee* your code speed will double with just a few hours at the key.

Here's how it works...

1) You hear somebody calling "CQ SS CQ SS de N0AX"
2) Send your call ONCE - "W7VMI" - don't send their call and don't send yours twice or three times. If they don't copy your call on the first try, they'll send "AGN" or "?" or just CQ again. So call 'em again. If they're going too fast, send "QRS" and they'll slow down.
3) If they hear you, they'll send something like this - "W7VMI 107 A N0AX 53 CO" What the heck does that mean?
- W7VMI is your call to let you know they're talking to you
- 107 is the number of the contact in the contest for them (their next contact will be 108, etc.)
- A is their entry class (low power) - there are A, B, M, Q, S, and U classes
- Then they send their call
- 53 is the last two digits of the first year they were licensed - it's called a "check"
- CO means Colorado, their ARRL Section (there are 80 - some are states, others aren't, all are two or three letters)
4) If you don't get it all, it's perfectly OK to send "QRS PSE, AGN" - which means "Slow down, send it again, please"
5) If you do get it - way to go! Here's what you send...
- Their call
- The number this contact is in the contest for you - if it's your first send "1" and pat yourself on the back
- Your class (QRP is Q, <150W is A, >150W is B, M is multioperator, S is a school club, and U is unlimited...don't ask)
- Your call
- The last two digits of the first year you were licensed - if you got your license last year, it's "01", for example
- Your section, "WWA" for Western Washington, maybe, or "IL" for

Illinois, or "PQ" for Province Quebec - ah, but oui!
6) If they don't get it, they may say...with a question mark, maybe...
- "AGN" - send everything all over again
- "NR" - repeat just the number a couple of times
- "PREC" or just "PR" - repeat your class letter, it's called "precedence" for a number of reasons you don't care about
- "CALL" - repeat your call (this is rare)
- "CK" - repeat the two digits of the year, your check
- "SEC" or "QTH" - repeat your section
7) They may ask YOU to QRS, you speed demon, so do it with a smile!
8) If they copy everything, they'll say a short "TU" (for thanks) or "R" (for Roger) or "QSL" (for received OK) and then just send their CQ or maybe just their call and away you both may go.
9) Sometimes, it just doesn't work out - QRM (interference) or QRN (static) or QSB (fading) or the cat could cough up a hairball on the rug requiring immediate action. Don't take it personally, just go find somebody else to call. It's a no-fault deal.
10) If you get tired of "Searching and Pouncing", then tighten your belt, mop your brow, cock your hat at a jaunty angle and call CQ! It's easy - don't have a cow, man, just call "CQ SS CQ SS de W7VMI W7VMI" and listen, repeat if necessary. Soon you'll get an answer. Just play back the above steps with you as the call-ee.

What's the object? Make as many contacts as you can. Try to contact as many different sections as you can. Try to spell your name from the last letters of the calls you work. Work your home state. Work your brother's state. Nobody can stop at just one QSO...

It's a lot of fun - the hours will fly by. Keep a simple paper log the first time out to make it easy - you can worry about entering it on a computer later. There are complete rules and instructions for operating and scoring and sending in the log on the ARRL Web site http://www.arrl.org/contests/rules/2002/nov-sweeps-rules.html. Come spring of 2003, you can click on over to the contest results and wonder-of-wonders, there your call will be with the mighty titans in the very same font size just a few lines away. Woo-hoo!!

Go for it!

You could probably count on two fingers the number of times in the
past oh say 10 years, when the situation arose where nothing but
Morse was available in a real lifesaving emergency. I am not
knocking code, just this old argument how it is going to be the
only thing to save the world someday doesn't hold water.

Such "nothing except morse is available" from time to time incidents
haven't been shown to be of any substance to constitute a
valid reason/rational. Indeed, such incidents seem to be
almost nonexistent where safety and/or emergency requirements
are involved.

Cheers,

Translation, there are none of substance.
More important, there are non that justify
any need to continue morse as a requirement.

Cheers,
Bill K2UNK

Bill,

"Almost" only counts in horseshoes and a-bombs.

During the Red River floods a couple years ago, we used CW extensively for communications from the disaster site in Grand Forks, ND to the Salvation Army warehouse/shipping center in Brooklyn Park, MN. This was due to marginal propagation on the 75 and 40 meter HF paths between the two locations (about 340 miles apart).

Dick, Dick, Dick, and I mean that sincerely. When are you going to actually take a look at a real HF radio and notice that they all have ssb switches? As a matter of fact, name one radio made today that is CW only (excluding hobbyist qrp rigs). Even the simplest handy talkies have built in microphones, but lack a CW switch.

You can use CW all day long and it wouldn't bother me one bit. How does that belittle you?

Your contempt for anyone not in love with your favorite mode is what has been documented here. That and your psk-31 failures.

I've "dealt" with women. I now have four sons from the experience.

At this late point so could I, the damned code test war is worn out at best. One dvantage the M3 license seems to offer is that they can get at least a taste of all the HF bands without having enough of a signal to screw the bands up with any mode. Plus they would have the opportunity to at least get a sniff of cw and out of that should fall some who decide to pursue CW further and upgrade with real code tests. For as long as they last anywhere. When ya think about it it's really like we had in the 50s when U.S. Novices were restricted in power output and restricted to operating in certain band segements. Of course the FCC put big teeth into the Novice ticket by making it non-renewable. Whatever. Both the Novice and M3 licenses are/were good "learner's permits" and good ideas in their times and had similar thinking behind their creation. IMO the Brits did a better job of it last year than the FCC did a half century ago.

I like the ten hours of class requirement for the M3. Hell, the M3s might even actually learn something beyond how to memorize the question pools. Dump that requirement in here and the free-lunchers would go apeshit again and we'd have anoher RRAP war.

So based on the above, is the Salvation Army now endorsing
continued need for CW testing?

Does the local emergency
management group(s) in Grand Forks mandate a need
for morse capable operators?

Did the incident describeded convince the FCC that
code is needed for HF hams?

Cheers,

Did it ever dawn on your small brain Larry, that there very well
may be no code licensees out there with engineering degrees that
know more about radio than you could ever hope to know? Some of
them may be designing electronic gear more complicated than you
could ever hope to see.

I will repeat, I am not anti code, I sat in front of an FCC
examiner to pass my CW test, but I rarely use CW anymore. It just
isn't the way I want to communicate, but I could if need be. I am
just can't subscribe to this idiot ideal put forth by some here
that if you don't use Morse code you are not a real ham or somehow
your are inferior to those who do. Larry seems to think because of
his code skills he is some kind of superior ham above everyone
else. As far as knowing code makes one more knowledgeable in ham
radio, I bet there are some no code licensees out there that could
put Larry and many others to shame with their knowledge of radio
and I bet when they attempt to join any ham radio emergency
organization, they don't come in with the Larry "I am superior"
attitude that turns everyone off.

Hans, you will note that Bill finds it necessary to jump in with his "almost never" mantra every time "CW" and "emergency" find their way into the same post. Ya gotta wonder what it is that makes him so nervous about it all.

73, Dick

Then you can relax, JJ, if circumstances ever happen where the world will depend on CW saving it it'll be long gone anyway. By then all you folks who can't see off the end of your noses will have dropped it from your bag of tricks and couldn't use it if your life did depend on it.

CW has always been another method of communication, tho better than most for those who learn it to the level of a communications skill. No one ever even hinted that it was anything more, and the "saves the world" scenario has always been nothing more than a figment of a feverish Nocoder's nightmare.

Yep, Dan; you are correct. We did have a KWM-2 in the 2nd position running into a 30L-1. The Heathkit was the 3rd position and was used for RTTY. The Collins rigs were very nice and would still make a darned good station today. I think (remember, this was 35 years ago!) there was a 250 (possibly 500) Hz filter for CW on the 32 receiver. Sweet.

Considering how stale Brainiac's lamentations have become, not to say repetitious or anything, and
FCC's towel-tossing makes good sense. Who would inflict such stuff on themselves indifinitely except
us rrap-ers?
I can't wait for No Test International to start up. It's coming.

You missed it again, still. My contempt is reserved for those -you're the prime example- who blame others for their own
failure to develop such a mundane skill as 13wpm code, and who sat and whined for the better part of two decades instead
of just getting it done. Somehow its always the fault of anyone but you, and you have no idea when to stop.

> That and your psk-31 failures.

Ah, yes, I find and ID a shortcoming of the mode and you find it convenient to convert that to "my failure". You are
hereby directed to Google to straighten yourself out in the remote chance such a thing is actually possible. I frankly
don't hold out any hope.

Bill:

The "specific need" to learn Morse code is obvious -- radio amateurs cannot exploit the many benefits and advantages of this mode unless they DO learn it!

BTW, I've just traded in my 5-speed manual gearbox 2001 Toyota Corolla LE for a 2003 Toyota Corolla LE with automatic transmission. I'm still going to know how to drive a stick shift, however, and may get a beater of a pickup truck to keep in practice.

One thing's for sure -- Morse code certainly WON'T "save the world unless there are radio amateurs who know how to use it with proficiency! In a real, flat-out, global disaster, I'll bet there could be literally hundreds of opportunities to communicate electronically by Morse/CW under conditions which would render any other mode useless. The problem is, we'll never know unless and until this skill is really needed in a real-world crisis. And the lazy whiners who couldn't be bothered to learn this valuable skill are dumbing down ALL of amateur radio in their desire to push a button and talk.

Bill,

Please have the decency to not insult us by trying to put words in my mouth.

I think I've been pretty clear here for several years in NOT supporting CW tests, and was only pointing out to you that CW still finds significant use among hams, INCLUDING use during emergency communications. I expect that usage will continue long after 2003, 2007, 2011, or whenever the test requirement goes away.

With all kind wishes,

Hans, K0HB

NONE of which has anything whatever to do with ham radio licensing. If it did, the FCC would just give all engineers a license with no further testing.

One ham is capable of communicating under conditions which make normal radio communications impossible. That ham has become well qualified at the use of Morse code. A second ham has your attitude and thus refused to learn it. So you can't discern any difference in the qualifications of the two? Are you wearing blinders?

> Larry seems to think because of
> his code skills he is some kind of superior ham above everyone
> else.

No, just more qualified as a ham than any ham who can't understand that an additional well-adapted, very efficient mode is potentially a valuable asset to the ARS, and not useless just because it's "old".

Just because FCC is dropping the requirement in no way negates that value. FCC does what it does for reasons other than communications value, as has been made abundantly clear.

There are always some "superior" people out there, in this field or that. What they are NOT superior at is communications on ham radio under the most austere conditions where only simply implemented modes are available and others are not, or won't work as needed. Larry wins hands down here, right along with the other CW ops, and all the others remain in the dark of their own choosing.

If we had a perfect world where the most efficient modes were always available everwhere, all the time, this would not be so. I think even the most rabid nocoder might be able to understand this isn't the case and most likely will never be.

Ya'll will probably get a kick out of this story then...

Circa early 67
Place Bien Hoa RVN, runway area.

A Collins representive was putting on a demonstration of the strength of the equipment.

A C-130 cargo aircraft was to demonstrate the survivability of the equipment when air dropped using the standard out the rear end with parachute trick often used then.

The aircraft would fly at several hunderd miles an hour just above the runway and kick out the pallet loaded with various items...including the KWM2A, 516F-2 consule and the 30L-1 all packed in their individual Samsonite suitcases.

Of course being a military operation there were lots of delays. By the time the aircraft finally showed up for the drop we had been told the equipment was so tough that nothing could hurt it.

The C-130 rolled in... the pallet came out the back..the shutes deployed and the pallet skidded along the runway for several yards...and came to a halt next to a tanker truck full of JP-4.

Over we all went, anxiously opened the first suitcase...the Speaker Consul was perfect...not even a scratch. Impressed we then anxiously opened both the remaining suitcases.

The equipment looked great...except that every tube was either busted or flopping around inside. We looked at the Collins representive....and in true salesman style said " I never said those cheap tubes would make it"..

In a real flat-out global disaster (using your hypothetically impossible
scenario), there *WILL* literally hundreds of opportunities to communicate,
under your hypothetical conditions. Only thing is, there is no disaster
great enough or territory huge enough to completely render "any" other mode
useless, Larry.

In a real disaster situation, there will (hopefully--and I think there will)
be enough amateurs with such a diversity of capabilities that your perceived
notion nothing could be done will remain simply perception.

Y'know? I just got to pondering on this, and other sentiments like it that Larry has made in the past. Seems Larry's angst is the failure of people to reach for higher goals and their willingness to "whine" about why they don't.

Yet, from Larry himself we have many times been witness to his declaration of his capability to succeed further in life--he just "chooses" to remain a bus driver; even though he has all this esteemed HR background, his successes and potential could-have-beens-if-they'd-just-let-him in the military--you know...on and on.

Well, Larry. Question is, what makes it so OK for you to "just stay" where you are even though you could be more; when it's not OK for people to choose what of amateur radio they will get involved with? What makes you so sure we don't know "everything about your abilities as a capable and effective" human being when you've chosen to go just so far--even though you profess to have the capability to go further? And, don't relate it to "whining" because if you don't think you're whining when you note how incapable your superiors are/were of recognizing your attributes, you're simply choosing to ignore the fact that you're whining yourself.

I think we're getting to know more of Larry than most of us would really like to... I'd like to see that answer, Larry.

No, it's pretty much that Larry only has ham radio to make him "*feel*"
[emphasis on feel] superior to others. He isn't. Let's use one of the
Larry-style impossible scenarios: Imagine if every radio amateur could know
Larry--as he has portrayed himself here in the newsgroup (he may be an
entirely different person face-to-face). Now, imagine that most radio
amateurs are quite capable of using and understanding CW. Now, imagine the
attitude of most radio amateurs when they hear a CW signal coming from K3LT
in an emergency situation and how willing most radio amateurs are going to
be to welcome his input with open arms and *know* that he is capable of
contributing positively to the scene.

Yeah, like I've said before: Larry may "know" CW. Larry doesn't portray
himself as someone I'd personally like to have active in a disaster. Fact

is, I'd pretty much prefer to fall off a cliff rather than deal with the likes of a K3LT. He may be an effective *mode* user. He is *NOT* an effective communicator.

Same for you, by the way, Dick.

>

Hi, Dan. Well, that's true--the internet that is. However, as a fairly new person to ham radio and as a casual observer of society in general, I think there's an even bigger reason for the decline of packet radio, CW, SSTV, etc.

Used to be, in the good 'ol days (right?) that ham radio was probably a great distraction for--mostly--men. Right? Yet, in the 'ol days, pleasure and "wasting time" just wasn't acceptable. I mean, I've even seen recent video of men wearing SUITS and TIES to a baseball game back then! So, while ham radio was a "hobby" (to use a loose term), it also had to have a purpose.

Couple that with financial constraints of most people in the 'ol days, and with the fact that most of us did not live in or near cities, and you have a situation where: more experimentation was done, more was asked of lesser stations (how many people could actually GET a great antenna system, let alone have it up) and--let's face it--the technology was no doubt more fascinating then than now. I mean, after, it's gotten to be "old hat" to see men walk in space, right? Hell, now they are conducting whole construction projects in space.

We (the younger/newer of us?--and I am 47!) have grown up with beeps, lights flashing, and can't even keep up with the next greatest more funner technological gadget! So, the propensity for "us" to sit down and put something together, take the time we don't have to wrangle up a packet station, etc., etc., just isn't there. Now, not saying that isn't sad--but

it's a fact.

Ham radio for "us" is much less than it was for those in the good 'ol days. Now, not only is it OK to waste time, we seek activities that enable it. We are so very busy at work and at impressing each other, that we welcome something that is brainless and pretty much takes our minds OFF those things we have to live with today. Life moves incredibly fast these days, and most choose not to be distracted by things that are going to make us think even longer out of our work environments. I mean, for me, it is everything I can do to get home and collapse to the boob tube--and that isn't even something I desired even just 10 years ago.

Most of us wake up with work on our mind, have to tend to taking care of kids and parents, get to the office, work all day (while, mind you, getting calls from the kids and parents) get out of the office, tend to taking care of more kids and parents, don't even have time to cook a real dinner and sit down for a family meal, and go to bed thinking about the next day's work. Think we can squeeze some time in there for putting together and playing with a packet station? Think we'll take the time away from something else to spend the time it would take to learn CW to a useable rate?

Hell, I don't even have time to pick up a microphone anymore! But, it's there if I need it.

Well, I went on longer than I'd intended, but you've gotten the point, I'm sure. Make any sense?

I suppose you are proficient in ALL modes available to hams. No? Then you are an inferior ham operator. There are some digital modes that may be superior in communicating than CW under certain conditions. CW is not the save all you wish it to be and to look down on others who choose to not use that mode speaks to your gigantic self serving ego. You and Larry want to believe that somehow you are going to be call upon to save the world with your CW skills...don't hold your breath, it isn't going to happen. You must be Larry's twin.

There will be, it just that Dickieboy and Larry can't except the
fact that their CW skills may not (probably will not) be needed at
all. That is the only way they can feel important. "Hey everybody,
look at us, we know Morse code."

Are you set up to run all modes? If not then you are less
qualified as a ham than those who can. Can you copy code in
French? Spanish? German? Arabic? NO? Well there are hams who can
in one or more of those and other languages, so you are certainly
underqualified as a ham.

Dan, I got one on a salesman. He was selling some emc receivers (over $60,000). He stated they were so accurate that you could calibrate them on a commercial FM radio station. I simply asked if he would choose the single tone, I'd be happy to choose the deviation; otherwise he could pick the deviation and I'd pick the tone. Then let's see him calibrate it. Ohhhh .. the Bessel function. Ouch. No carrier.

He can't. If the transmitter is more complicated than a two-tube
MOPA he gets lost and waves his morse key around like a
sword. :-)

Go for it, superchief! I remember the Red River flooding all too well and the lack of news coverage of all that amateur radio stuff on the major news services...and back then YOU put a a lot of words to me that weren't in a kind manner. :-)

>I think I've been pretty clear here for several years in NOT supporting CW

I'm sure the ARRL will do just as fine a job of promoting morsemanship over the same period of time...along with all of the other morsemen "radio experts" doing roadrunner imitations.

Mighty are the fallen...

That's just an oxymoron statement, Larry. It doesn't qualify as a specific need for FCC rulings.

OOK CW has gone the way of all obsolete skills. It just dies hard because a lot of many-certificated self-described "radio experts" insist everyone be "as good as they" in morsemanship.

A few of them morsemen have turned into morse zombies in here.
:-)

Oh? :-) That means the ARRL is falling down on the job!

Did the FCC "cave" on 90-53? NCI didn't exist then.

I'm waiting for Carroll to admit that Shannon's laws exist. Or that
the New Madrid Fault will cause a quake in his 'hood soon (Dick
read all about it in a book once, he said). I'm waiting for him to
admit that the word "telegraphy" also applies to teleprinters.

I'm not waiting, really...Dickie won't admit anything wrong...just
like every other qualified master morseman won't admit they are
wrong. Their past is not only prologue, it is de rigeur for the
future. :-)

Bill, I remember seeing the Red River flooding on CNN and the
major news broadcast networks. Nice video and audio along
with obvious olive drab radio Humvees of the NG in the back-
ground with nice long whip antennas in the bent-over NVIS
position. I doubt that the NG units were busy strapping on
old J-47 leg keys. :-)

Come to think of it, none of the TV networks carried anything
in video or audio about any amateur radio emergency comm

going on. I don't recall them doing it for the Missouri and Mississippi rivers, either. No doubt that was all the fault of the networks... :-)

I really don't think the FCC have been fully convinced of the terrible NEED of the morse test for amateur licensing from any event in the last dozen years. Of course, all the terrific old morsemen in here will say otherwise in no uncertain words. They KNOW... :-)

Maybe true 50 years ago back in the vacuum tube era, but in today's
solid state rigs the voice circuits are only a small portion of the entire
rig. Which essentially means that if that rig (and a power source like
a car battery) survives a disaster well enough for CW to function, odds
are that the mic and SSB function will also survive. And voice modes
do have the advantage that non hams could make use of the rig while
the ham has to get some rest. That would be fine by FCC rules in an
emergency big enough. A local doctor or nurse could, once the ham
establishes the radio contacts (emergency net), use the mic directly
to order up medical supplies or extra help or whatever without having
to explain to the ham medical terms needed to communicate the needs.
Saves time if nothing else. You can talk faster than 20wpm anyway.
And today's rigs are reliable enough to not require a ham to babysit
the station once the setup is running.

> must be Larry's twin.

JJ, whatever I may be you just showed yourself to be a very inferior thinker.

There are a virtually infinite number of modes available to hams. The only limit is that any new mode or code be published ana made for the public and of course the FCC. So no one even knows what all modes available are, much less has proficiency in all of them.

Many new modes are of superior efficiency to CW. Unfortunately few of them if any are widely
available to hams where CW mode is incorporated into virtually every HF rig made. Anyh rig that can produce an RF carrier can be pressed into service as a CW transmitter, no key needed
if none is at hand. Now try to do that with any of your new digital modes. I assume you're informed enough to understand the point.

And if you'd just do a tiny bit of reading before mouthing off you'd easily see that no one intends to use CW for a disaster or emergency where better modes are available and work as needed. Of course when your mind is made up it's futile to try to confuse you with facts, so
press on with the ignorant rant.

> I expect FCC grew weary of all the protestations of NCI types, and caved.

The FCC made up it's mind to drop the code tests long before the NPRM
popped up and there are NCI members who agree with that in retrospect.
The FCC had ongoing hassles with test waivers so they eliminated the
underlying source of the hassles and that was the end of the code
tests and the waivers. Dirt simple common sense decision and there
wasn't any more to it than that. The NPRM showed up later as the
mandatory procedure the FCC had to trudge thru to codify the decision.

In the process NCI conveniently came along and presented the FCC with
an opportunity to show that they had support for their decision.
Ancient bureaucrat's maneuver. All the warfare here and all the
responses to the NPRM were complete wastes of time & energy, the deed
had already been done.

Yes indeed you do have many valid points. I just happen to think there is a LOT more to it than not enough time and too many gadgets. And your not all that far removed from my age....I am 56. I was first licensed at 13. And yes it was amazing that I could use a kit transmitter that I built into a hunk of wire strung out my bedroom window and talk all the way to NYC....and things have become so much easier and the luster is gone.

But there is more to do in ham radio. There is moonbounce, there is AO40, there is television, there is...etc...etc.

No I think the major problem with ham radio is whats wrong with our society. Too damn many people wanting something for nothing. And for the most part getting it.

I don't argue with you on any of that, just this attitude that if
a ham does not use code any more or has a no code license that
somehow he is an inferior ham. This idea that using code somehow
make one superior is stupid.
I would really hate to see code disappear from ham radio as it has
been a tradition from the beginning, and I don't believe it will
even if the code test is dropped from all license classes. There
well always be those who find it interesting enough to use it.
Just don't use it as some sort of status symbol.

The need to learn morse under your statement is simply
to do so IF you want to. THAT is the issue...mandatory
testing of a mode that has clearly fallen from any
need for mandatory testing. The fact that you and I
can drive manual gearbox autos/trucks doesn't lead
to any need for everyone to be mandated to be tested on
how to drive a manual gearbox vehicle.

Hans,

Likewise, I do not oppose the USE of morse by anyone.
I simply note that there is NO justification for continued testing
of morse. The very few incidental uses of morse in
whatever emergency circumstances may have been involved
are insufficient as any basis for retention of code teting.

Cheers,
Bill K2UNK

Cute. I was over at a friend's shack last year. The poor guy was showing me his shack .... he was bothering to translate the CW (about 30 words per minute - nice and slow) ... he suddenly stopped and stated 'Oh - I forgot - you can copy CW'. Yep, and we've been friends for almost 40 years. Oh well. Who cares? I've put 40 on paper for the U. S. Navy. That was the fastest tape they had at Bainbridge, MD. Sigh.... it is amazing when folks talk about CW being totally obsolete ... there was a time I could put CW on hard copy on a typewriter faster than most people could type. Ok, so they can cut and paste in Winblows. Great. Sometime, get a life and put your own thoughts on paper. Please don't make me wait for your 20 words per minute or less capabilities.

Interesting. You're saying that even in a basically rural state like
Alabama there is enough packet infrastructure up and running to let
you go three hops to a cluster. And the cluster does exist. Yeah, I
think this strongly supports my contention that 2m packet is far from
dead, very far from dead.

>
> Of course SSB will whip FM butts in the long haul catagory. But for
> channalized style of operation FM is clearly the winner.

Channelized vhf/uhf ham comms is the problem. Seems to getting worn
out in some circles, "it ain't ham radio". Or something.

Per previous I think I'm sensing something new in this regard. Some
hams at least around here are apparently tired of the same old same
old operating restraints associated with FM repeater comms. Over the
past six-eight weeks I've heard maybe a half dozen brief exchanges
during busy hours on the machines like "Joe, let's take it 144.2xx"
and poof they're gone. In all the years I've been lurking the machines
this is new. I've jumped with them a couple times and listened,
they're running "simplex" ssb a la 75m ssb. I can't decode it very
well with my FM-only gear but it's obvious what they're up to.

Mobile to mobile, mobile to home station, etc. It's not classic weak
signal work at all, it's making use of ssb's ability to do much of
what FM can't do without a repeater for regional comms. My guess is
that the recent availability of multimode multiband underdash xcvrs
like the IC-706 and others like it are increasingly being used to duck
around the machines for one-on-one chats with 2m ssb. There are

currently a couple scheduled weekly 2m ssb roundtables in the area.
Would work for me, I had a helluva lot more fun on 2m phone when it
was AM then later FM simplex before the band got "channelized".

As a pereson, no. Just his knowledge and skill set. And his lack of ability at
BASIC amateur radio communications. There is no more basic a skill in ham radio
than the use of Morse code.

You got that right Brian. I first got on 2 AM in 1961. We had crystal controlled TX and VFO receive. Seperate 2m converter into the SX-111A. Tx was a HB jobber with a single 832a in it. Worked great into the 10 element fed with 300 ohm and a homebrew balun.

There is that "I know code therefore I am a superior ham" attitude
that turns others off. Instead of you and Larry having this ahole
attitude that no code license holders are so inferior, why not
take the an attitude of, Ok now that they have obtained the entry
class license and have gained an insight into what ham radio is
about, encourage them to attend a class and learn the code and
upgrade? Maybe even stoop so low as to elmer one yourself.
Oh I know why, if they did that, then all these hams might become
proficient in code like you and you would have no one to look down
upon to make yourself feel superior.

There you go again, your superior "I know code, you don't
therefore I must be superior", attitude. I bow to the almighty
code god.

Come to think of it, none of the TV networks carried anything in video or audio about any professional radio engineers manning thier stations and making sure they were on the air. And since it was never reported in the general media, we must assume by Andersonian logic, that it never happened.

Nor did I recall any stories about professional radio technicians laboring long hours to keep public service repeaters and other commercial, business and common carrier systems operating. Again, except for generalized "public utilities workers" stories telling of how they were laboring to restore services, we never heard (or saw) any items on how radio technicians contributed to the restoration of services.

But since the press didn't mention them by name or title, I guess it never happened, huh Lennie?

>
>No I think the major problem with ham radio is whats wrong with our society.
>Too damn many people wanting something for nothing. And for the most part
>getting it.

So, society has been "different" in the past? Nooooo... :-)

The thinking of this particular pro-code "society" is that everyone
is supposed to think-enjoy-become-virtual behavorial clones to the
"society" members. That's a grandiose, smug viewpoint of self-
definition. To a few it arouses hate and anger in those who cannot
accept any deviation from Their norms. Not a good attitude for the
general part of the "society."

On-off keying codings started in when that was all that was possible.
It happened when radio technology...all of electronics...was terribly
primitive. Technology has changed and the regulations and
standards have changed as well. Some in the "society" cannot
accept that...or cannot learn...or are too ego-prone to allow change
to benefit others. That results in the insults and put-downs
scribbled by the beepers against the NCTA.

NO, that is NOT the "Way it is."

Morse code testing got into regulations through legal necessity
of regulating a growing chaotic condition in radio communication.
It was law made by humans...and it can be unmade by humans.

It is axiomatic in human behavior to resist change. Change is a
disturbance of things familiar and represents a potential threat to
survival. Such behavior becomes more evident with age among
those who have acquired a particular skill long ago and use that
acquisition as a disguise, a rationale to get away from learning
anything new...or they use that to put down others who don't
accept their Way of life.

The Supreme Being did not proclaim on-off keying codings as
any sort of "basic communications." The Being installed basic
communications in humans millennia ago. Humans devised
on-off keying codings. Humans put code testing into regulations.
Humans can take code testing out of regulations.

THAT's the "way" it is.

I see it as being egocentric. Some have bent their whole life into
becoming so-called experts in communications arts of their
youth. They bought into earlier concepts, made it there, and
have refused to change.

They cannot accept change because such change would rob them
of their feelings of superiority. They need that superiority status.
Seemingly desperately so.

>I would really hate to see code disappear from ham radio as it has

Morse codings won't disappear overnight. The only radio service
using it regularly...or even part-time...is as an avocational activity
by amateurs (non-professionals). It is a recreational pursuit.

If you feel that recreations and avocations must be run, regulated,
and maintained like some military or public safety service, then
insist on all the militia trappings of "tradition," "standards" to keep
the past forever in the future. Form ranks, dress-right-dress, count
cadence while in virtual uniform, marching to a common drumbeat.

I became an electronics hobbyist in 1947 and enjoyed it. I became
a professional in radio communications in 1953 while in military
service (HF comm, trans-Pacific, 24/7). Never once in those 55
years since have I ever been required to know, learn, or use morse
codings for any occupational or avocational purpose. The only

remaining radio services requiring morse code skills on HF today (in the USA) is amateur radio and maritime radio on the Great Lakes (!). In maritime radio, internationally, GMDSS has replaced the old 500 KHz international distress calling frequency (by CW).

If morse code testing "must" become a regulatory mandate to "keep tradition" in an avocation, then I say that the FCC should rename US amateur radio as the Archaic Radiotelegraphy Service. That would forever enshrine code proficiency as the premiere skill so touted by the NCTA.

Very true, Bill. But hasn't the no-code Technician's license addressed the issue of mandatory code testing preventing folks from becoming hams?

> The fact that you and I
> can drive manual gearbox autos/trucks doesn't lead

That's funny, Bill. My first driver's license was indeed a "full privileged" license as I took the exam in a standard shift car. Those who took their exams in an automatic transmissioned cars were licensed solely for vehicles so equipped. If you were pulled over or involved in a traffic accident while driving a standard and you handed the officer a driver's license endorsed solely for automatic transmissioned vehicles, the officer would hand the license back to you and repeat the request for a "valid" license...for it was a good as not having any license at all.

Only for VHF and up. The issue today (2002) is that there
is NO reason for mandatory code testing for any band
segment/use.

> > The fact that you and I

In what state was that so? and when?

Today, NO state makes any distinction for automaic vs manual gearbox
licensing for regular driver's licenses. I have asked many times for anyone
to identify
any state that might still make such a distinction and no one has ever
identified such a situation still existing.

I was first licensed in 1957 to drive in NY state
with NO restrictions even though I and others took the test on an automatic
vehicle. I took the test on my dad';s 1955 Plymouth and was immediately
able to then drive my 1950 Ford (manual).

Well, we have a difference of opinion there. I believe that all "privileges"
should be earned. (I know, I know...the FCC says...) I personally don't
think the writtens constitute much of a challenge, particularly with a
published Q & A pool. A 5-wpm code test for full HF privies insufficient?
It'd actually be funny...if it weren't so pathetic.

A skill set, however, that has been shown to be no longer a needed
one to be a good communicator. Learn and use it all you wish. I have
nothing against anyone using morse, learning morse and/or
encouraging others to do so. I am against the requirement only.

> > I would really hate to see code disappear from ham radio as it has
> > been a tradition from the beginning,

It was NOT a tradition in the beginning. It was THE ONLY mode
in those early years. The fact that morse was extensively used
in amateur, civiliam and military communictaions well into
the 60s is what made it a tradition. As a tradition, however,
today it has no validity as a requirement for amateur testing.

The burden to keep morse an active mode will, once it is ended as
a requirement, become wholly the responsibility of those that
profess to wanting the mode to continue to be learned
used.

> > ... and I don't believe it will
> > even if the code test is dropped from all license classes. There
> > well always be those who find it interesting enough to use it.
> > Just don't use it as some sort of status symbol.
>
> Sorry, that's life and the Way it Is.

True to a point. Labeling morse skill or any other skill is strictly
a personal opinion. I can appreciate those that know morse well
as being more cable of such use than me. What I find fault with
is the small minded attitudes of some that suggests that other hams
with a multitude of skills, often both technical as well as
operating skills, are viewed as "not capable" of of lower

capability than those that have morse knwoledge. While that may
have been true in 1960...it is not at all so in 2002.

> Those who can, do.

Those that want to are free to do so. Defining morse as a
requirment is not, however, valid anymore.

> Those who can't whine about those who
> can. Or get off their duffs and just do it.

Odd, I don't recall anyone whining about anyone
simply because they know morse code. The complaint,
as I have voiced it above, is in those that laud themselves
because they know code and belittle those that choose
not to know code and/or oppose code as a test
requirement.

Cheers,
Bill K2UNK

Dick, I've never sat and whined or blamed anyone else about anything.
I gave 13wpm my best shot and it just didn't happen.

Meanwhile, I still considered it an unnecessary and irrelevant
requirement. Wonder why it went away?

> > That and your psk-31 failures.

PSK-31 is just fine as a mode. It rate it right up there with any
other mode. I especially like the stand alone FCC exam for PSK-31
that, should you happen to fail it, banishes you to the novice cw
wastelands forever.

But you'll never get the analogy, so more wasted words on the Dick.

Where we differ is is in what should be used for "earning" privileges.
The requirements which constitute the entry gate to amateur
licensing needs to be justified and rational. At one time morse
was an appropriate requirement...that is not true anymore.

WHEN?
In fact, when I was in Jamaica in 1968 while in the Navy,
there was no need for a manual license certyification to rent
a car. Seems any USA license did just find. Mine was, at the
time, from Florida.

At one time CW was the only mode (after spark was outlawed). Now it
is merely one of many, many modes. Do you know why there are many,
many modes? Do you even know why you are wearing blinders?

Make the exams as big as you want - as long as you can keep them relavent.

Interesting...so you now are crediting NCI with
actually influencing the outcome. Seems like not too
long ago you and others were of the opinion that
the FCC made up their mind without any help from
NCI type's input.

> > I like the ten hours of class requirement for the M3. Hell, the M3s

Strange, when Carl and I met with the FCC before
the R&O was issued the FCC staffers seemed to be
quite capable of dealing with input from anyone.

> I can't wait for No Test International to start up. It's coming.

Yawn, same old hollow prediction. I'll say this agin,
as I have previously, if ANYONE petitions or otherwise
starts an organization that wants to end ALL testing,
I will be an active opponent of such...as will, I believe,
all other NCI directors.

Cheers,
Bill K2UNK

>The burden to keep morse an active mode will, once it is ended as
>a requirement, become wholly the responsibility of those that
>profess to wanting the mode to continue to be learned
>used.

Except for those of us who have always claimed that it is the *requirement*
that keeps Morse code being learned and used. Personally, I have never claimed
that "Morse code can stand on it's own" -- mainly because most potential hams
do not desire to dely their gratification long enough to learn how to use it.
Therefore, the requirement must be re-introduced and strengthened in order to
permit future Amateur Radio Operators to be able to employ this mode and
exploit it's many benefits and advantages.

>> > ... and I don't believe it will
>> > even if the code test is dropped from all license classes. There
>> > well always be those who find it interesting enough to use it.
>> > Just don't use it as some sort of status symbol.

The notion of "Morse code as a status symbol" exists only in the minds of those
who can't be bothered to learn it. For the rest of us, it's a practical,
useful communications skill.

>> Sorry, that's life and the Way it Is.
>

>requirement.

Most of those who oppose code testing as a licensing requirement don't know what they are talking about, and aren't qualified to have an opinion.

WHO determines who's qualified to have an opinion on this matter?

I do!

One of those "courtesies" that some view as inequities. For example, my wife passed a code test in her native Ecuador by just sending a few characters and was granted a Novato (Novice) license. She now gets to ply her hobby here to the limit of her license, NOT to exceed those of an Amateur Extra. There are only two license classes in HC land, Novato & General, and their Novice has considerably more privies than our equivalent. It's a courtesy, like our recirocal agreement. Police officers in 6Y land will honor a foreign national's driver's license. I suspect it works like that all around the world.

Er...ah, I'll give you the benefit of the doubt, Bill. Jamaica is an island
in the Carribean. (Hence "West Indies.") It is divided into three of what
you *might* consider states, Cornwall, Middlesex, and Surrey. These are
futher divided into parishes. I took my exam in Montego Bay, which is
located in the parish of St. James. (Cornwall)

Removal of code requirement for lowest licence class is a good thing, it definately increased membership. One factor is the lack increase in licence numbers is the lack of publicity. People aren't aware of Ham Radio, so they dont join.

Also, the majority of Hams are appliance operators. I have been to several clubs. The clubs, Hamfests, Conventions, etc are composed of those that are not interested in much more than antenna setup. These clubs are usually appliance operator clubs.

Also, when they see a bunch of appliance operators, contesters, codeword users, they believe it is some strange (and uninteresting) cult.

As a result, the technically savvy people you mention do not become interested and do not join.

Why not include such activities at club meetings? Or make Field Day more technically oriented?

For those interested in radio direction finding, kit building, design projects, test equipment operation, troubleshooting projects, AND antenna setups, I propose the following new type of club. How about an Amateur Radio Experimenter's Club?

I have mentioned this before. I dont feel this exists in Ham Radio today. (Perhaps in the past). I dont feel QRP clubs qualify as it is too codeword using, and tends to emphacize CW.

I am in the MA/NH area. I have several interesting project ideas, parts, equipment,etc. Anyone interested in this type of club?

On any given weekend there are thousands of folks driving
"obsolete" automobiles...myself included. Using and
enjoying such vehicles does not change the fact that they
are, for all intents and purposes, obsolete.

Cheers,
Bill K2UNK

Not sure how to read that...
Are you agreeing that no USA state makes the distinction as I claim,

or are you doubting my assertion that is the case?

By state, I was referring only to those 50 states of the USA.
No disrespect was intended toward Jamaica. I recognize
it as a soverign nation. Other than a brief visit compliments
of the US Navy, I haven't otherwise been there.

Cheers,

Larry,

Please be sure to file such comments with the FCC at the
appropriate time. I'm sure they don't realize you are the
sef appointed "Judge of qualifications for having opinions
on code testing in the ARS."

ROTFLMAO!

Cheers,
Bill K2UNK

I'll vote for that . . done both, actually.

First one was a leggy skinny young blonde. I drove her batty with beeping, dxing & contesting, she drove me batty and I finally told her to take a hike. So she married another W3 1x2 hardcore beeper and got a Tech Plus, she's on the machines in the Indianapolis area.

The pilot is an instrument-rated redhead IBM mahout, Southern gal, learned to fly at Nashville Int'l BNA. Kinda like pillow talk one nite she told me about the time she soloed in her brother-in-law's Mooney. She was on base with the tower op coaching the turn. "An incoming American Airlines pilot came on and told the tower he wuz gonna do a go-around so that the lady would have the runway all to herself. Wasn't that nice of him?" Sez Kelly. "No Sandra, he wasn't being nice, he didn't wanna be anywhere near your airspace."

I had to start all over the next nite.

One could say that that all the testing really needed would be for rules and regs, and electrical and RF exposure safety questions. And maybe a question or two to test for knowledge to understand why you shouldn't set your rig to 14.349 USB and transmit (the bandwidth of your signal will bleed over the edge of the band and you'd be out of band).

But given that we are the only radio service that is allowed to use non-type accepted transmitters and pick which band and frequency we feel like using (as long as it conforms with bandplans), we should have some knowledge of radio matters and pass a basic test on such.

What does seem a little silly is requiring a higher grade of license to use say 14.161 vs. 14.321 That exists mainly because it is easy to determine the carrier frequency a ham is using from a distant FCC monitoring site. It's a lot harder to determine power level. "Is he using a beam pointing at us?".

Oh, I get it, I got the skinny on you long ago. You'd rather sit bitching for half your life rather than go through a minor
learning process you think "unnecessary".
As a veteran of two enlistments in the military myself, I must say it is really remarkable that you made it. Must be an
aritifact of the times. Whiners are pandered to even in the military these days.

You flatter yourself way too much. Your reference was back when the FCC actually had funding, backing of officeholders and honest to gawd clout. This is the New Age when no one gets their sensitivities stepped upon for any reason whatever.

Keep flattering yourself long as you want, Bill. NCI was not even a blip on the screen. An afternoon of amusement for some staffers, maybe, a break from their routine duties no doubt. But if you 'got what you wanted' it was purely coincidence. FCC had its mind made up long before you and Squiggy made fools of yourselves. The medical waiver fiasco was more than enough to do it. The path of least resistance wins everytime.

relavent.

Actually the arguments that are being used to eliminate the CW requirement can also be used to eliminate all but the FCC rules from the amateur tests. Afterall why should a person answer any questions about PSK, RTTY, Amtor, Packet, propagation, eletronic theory, and so on when all they ever intend to do is pick up a mike and talk. If CW is irrelevant so is everything else but the FCC rules. This is the road to complete chaos.

Also I have never looked down at the no coders. I encourage them to take a stab at upgrades including CW and would happily elmer any who wanted me to. Instead too many (not all) would rather wait until the requirements are made easier, "dumbed down". So why should I not be upset. I've offered to help and gotten no takers.

> using a beam pointing at us?".

.....or is he running 100 watts and experiencing particularly good propagation to my area?

So it's all a matter of decision as to what is or isn't "required" along with the reasons. The reason for several classes of licenses has long been the idea of incentives to promote learning among ham radio operators. Increased code speeds were for the same reason.
Incentive licensing was an excellent idea, but wasn't so excellently implemented. The fallout will probably prevent any ham radio licensee from ever having privileges withdrawn due to rules change for as long as the memory of all the protesting lasts. But it was still a very good idea. To suggest otherwise is to admit that a dumbed down ham radio is a good thing and will be in the future. For a dumbed down ham radio is what we have.

Just to be sure, Larry.. You don't really want to gain huge numbers of hams do you? I've heard the arguments, and to have the ARS "explode" in size kind of worries me. The total increase we have now is a little worrisome.

On what basis do you consider I (and Carl) made fools of ourselves?
We had a most pleasant time with the FCC. Very congenial, no

one rushed us and the questions we were asked were logical and
to the point. If, as you appear to believe, the FCC had already
made up their minds, then that is of little concern to me since
the outcome was as we desired. Seems like a win to me...your
,ileage may vary.

Gee.... if the code was so important as you say you value it, should you already be teaching code??? Seems like a more viable utilization of your efforts and energy with a positive end result, than bitching about the "no-coders."

Granted, some will forever resist you, but there will be some that will "take the bait" and run with it. (becoming morse code fans....) I guess you gotta decide which is more important to you, preservation of something you apparently hold dear, or just sitting around bitching about the problem.

For example (but in a completely different way) in the fire service, we can bitch all day long about fires starting from accidental sources such as kids playing with fire, or from needless reasons such as the lack of fire safety products such as fire extinguishers and smoke detectors. Or we can go out and educate the public, with the hopes of at least positively reaching at least one person. If we reach more, GREAT! Although amateur radio and the fire service are two completely different entities, this is about the closest comparison I can come up with.

I feel the same about APRS..... damned if I wanna post/publicize where I am at every minute. I can see some practical uses in the case of an emergency, but for day to day usage, its not for me.

It is tenfold more popular around here (where I live) over packet, which is a damned shame. Feel like an ass for investing in packet equipment and all there is, is the same 3-5 people in the area, as well as only being able to reach out 1 node away (next city over). I do however make sure that the packet equipment does work, as I see that it is a great local based communication tool in an emergency situation. Good for some of the messages that you do not want to verbalize over a voice frequency.... Only hope there is still others that have that same capability when the time comes.

If packet allowed more speed, and possibly better file sharing, maybe it would serve more of a purpose, but about the only good use I see is simple text messages at an incredibly slow rate in comparision to what is now being done in wireless networking etc.

Amateur Radio Newsline™ Report 1316 – November 1, 2002

Amateur Radio Newsline report number 1316 with a release date of Friday, November 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A child is saved thanks to C-B radio in Australia and Ireland opts to restructure with slow-code. These stories are first on Amateur Radio Newsline report number 1316 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CB HELPS SAVE HAM RADIO OPERATORS DAUGHTER’S LIFE

The daughter of a ham radio operator is alive after he to turns to C-B radio for help. It happened down-under in Australia as we hear from Q-News Graham Kemp, V-K-4-B-B:

--
Recently on holiday at Finley, S. NSW, Eric VK2TRD's daughter Tegan, 12, had a very narrow escape, after she was bitten twice by a Tiger Snake! After emergency treatment at Finley Hospital she was transferred by Ambulance to Shepparton, Vic.

Travelling to Shepparton Eric called five times on the 2m repeater seeking guidance to the Hospital, no response. Disgusted, he called on the UHF CB repeater and got instant help.

Over 6 days there, nothing was heard on the repeater but the ident., and that was when Eric fired it up. On 2m simplex, only 2 farmers using it as an intercom, no c/s's.

Tegan, that night suffered cardiac respiratory arrest and was in intensive care for two days. Now at home she is doing OK. A traumatic time for all.

For the Amateur Radio Nrewsline, I’M graham Kemp, VK4BB of Q-News Australia.
--

Once the ordeal was over, VK2TRD paused to thank all who helped in his daughters rescue. This included the Shepparton CB’ers for their immediate response.

**

RESTRUCTURING: IARU REGION I MEETS NOV 10

The International Amateur Radio Union Region 1 Conference is slated for the tiny nation of San Marino beginning on November 10th. And according to the W5YI Report's Fred Maia, it could be a rather hot meeting. The reason -- two words: Morse code.

Writing in the November 1st issue of his newsletter, Maia says that the subject of Morse proficiency testing among those serving on the High Frequency Committee is shaping up to be controversial. On one side are two giants. Germany's Deutscher Amateur Radio Club and the Union of Russian Radio Amateurs are two national societies who are already on record as opposing dropping Morse testing as an international requirement.

Leading the charge to eliminate manual telegraphy tests is the Radio Society of Great Britain. It says that Region 1 if the International Amateur Radio Union should formally endorse the October 2001 resolution of the IARU Administrative Council in respect to abolishing mandatory Morse exams.

Both the Deutscher Amateur Radio Club and the RSGB have submitted well crafted conference documents stating their respective positions. How this will all work out will be known at the close of the conference on November 15th.

**

RESTRUCTURING: IRELAND ADOPTS 5 WPM

Meantime, restructuring and slow code have come to Ireland. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details:

--
According to Echo Ireland, that's the journal of the Irish Radio Transmitters Society, a set of new amateur radio regulations were signed into law by the Regulator in the Republic of Ireland on September 11th. The newws is just getting out and the main points of the new regulations governing ham radio are as follows.

First, the Morse code test speed has been reduced to 5 words per minute to bring it in line with whats become the defacto world wide standard. More important, that there is no longer any age restriction on a persoin getting an Irish ham radio license. This means that anyone -- any age in Ireland can brccome a ham. And up until now, there had been a probationary period of a year before a Full Licence could be issued. Now, thats gone too.

On the technical side, the maximum power permitted on each band is now listed in decibles per watt R-M-S at the output of the transmitter. This is good news because it effectively allows a power increase for Irish amateurs. The old regulations specified that limits were regarded as input power rather than measured at the R-F output jack.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.
--

We will have more news from around the world later on in this weeks Amateur Radio Newsline report.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amador County Amateur Radio Club Net serving Pine Grove California.

(5 sec pause here)

**

ENFORCEMENT: YOU CANT USE THOSE RADIOS ON FIRE CHANNELS

Back on this side of the Atlantic, the FCC has told a fire department to stop using illegally modified ham radio gear. The FCC's Daryl Duckworth, NN0W, explains:

--
Duckworth: "The Enforcement Bureau has notified the Bon Secour Fire and Rescue Department in Alabama that the Amateur equipment they were using was contrary to Commission rules because it had been modified to operate on Public Safety frequencies. The letter referred to several Icom IC-V8 handie talkies."
--

The note went to Karl Bingert who is the Chief Bon Secour Fire & Rescue Department. It told him that the use of Amateur Radio units of any kind, modified to operate on its frequencies, is against the Commission's rules and would result in enforcement action by the FCC. (FCC, RAIN)

**

ENFORCEMENT: FCC BACKS REPEATER OWNERS BAN OF UNWANTED USER

The FCC is once again backing up a repeater operator who wants to ban a particular user from the system. Its all taking place in Ohio. Again, the FCC's Daryl Duckworth tells us about the situation and the agency's position in favor of the people running the machine:

--
Duckworth: "The Enforcement Bureau sent a Warning Notice to Billy R. Marshall, N8ORF, warning him to stay off of the W8HFF repeater system in the Toledo Ohio area. The Toledo Mobile Radio Association had issued two letters to Marshall requesting him to stay off the repeater due to his failure to follow operational rules.

The Enforcement Bureau reminded Marshall that control operators may take whatever steps are necessary to insure complience with the rules and that they will be backed up by the Commission"
--

Marshall was given 20 days from the date of receipt of the FCC letter to reply and outline what steps he has taken to comply. (FCC, RAIN)

**

ENFORCEMENT: PHONE COMPANIES FINED

Two companies have learned the expensive way that it does not pay to try to grab another telephone company’s customers. This, as the FCC issues two Notices of Apparent Liability proposing a total of $6,560,000 in fines against two operator service providers for taking advantage of consumers.

The companies named are Opticom Corporation and ASC. The FCC says that the massive fines are based on Opticom apparent sixty-four violations, and another eighteen apparent by ASC. The term apparent is the FCC’s way of alleging a violation has taken place. The Commission says that it calculated the proposed fines by using the $80,000 per violation amount previously used in cases involving egregious slamming. Take your browser over to http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-226534A1.doc to learn more. (FCC)

**

RESCUE RADIO: EMCOM SUSPENDS NATIONAL EMERGENCY ALERT NOTIFICATION SYSTEM

EMCOM -- the emergency alerting system has suspended its the National Emergency Alert Notification System operations effective October 25th. Our producer, Bill Pasternak, WA6ITF, has the nitty-gritty:

--
In making the announcement, EMCOM officials said that what they term as a stand-down also affects the Emergency Information Web Sites maintained by EMCOM for every state, county and municipality in the nation. Also impacted are over 1 million other web pages that reportedly utilized the automatically updated EMCOM Homeland Security Status Bar or the PubAlert notification bulletin pop-up system.

By way of background, for the first six months after the 9/11 tragedy, EMCOM offered to provide access to full use of the system to any community's emergency agencies for $500 per month. During that period there were no takers, even though EMCOM had notified almost every senator, representative, and agency in the nations capital.

So the bottom line is this: The EMCOM alert system is dead for now but hopefully not gone forever.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.
--

In making the announcement, EMCOM took the opportunity to express its gratitude to the hams, ARES and RACES operators who helped to get the system off the ground.

More about EMCOM is on the web at www.comdinet.com/emcom (EMCOM release)

**

RESCUE RADIO: SKYWARN RECOGNITION DAY

On a more positive note, Larry Boyd, KB4GFT says in an Internet posting that The 2002 SKYWARN Recognition Day will occur on Saturday December 7th. It will begin at 00:00 UTC and run for 24 hours.

SKYWARN Recognition Day was created in 1999 by the National Weather Service and the American Radio Relay League. It honors the contributions that volunteer SKYWARN radio operators make to the National Weather Service.

Last year 80 National Weather Service offices participated. The list of this years participants and other information is on the web at hamradio.noaa.gov (KB4GFT)

**

RADIO RULES: RULES REWRITE ON MEDIA CONSOLIDATION

The Federal Communications Commission has embarked on a major rewrite of rules that limit the consolidation of media companies. The overhaul, which FCC officials first announced in June, is likely to conclude by the middle of next year when the agency issues final rules.

Many observers expect the agency to relax the current media ownership restrictions, although FCC officials stressed during a recent meeting that they had not reached any conclusions. The FCC is seeking comment on whether it should keep or change six specific media consolidation rules, including bans on common ownership of a newspaper and television station or television and radio stations in the same media market, as well as a limit on the percentage of the national audience that any station may reach.

Many of the rules were written decades ago before cable and satellite-based television and the Internet. The proceeding is being conducted under a statute that requires the FCC to periodically review its rules to determine whether they remain in the public interest. (FCC)

**

COMMUNICATIONS LAW: JUDGE THROWS OUT PAY AS YOU CLICK CASE

Its a big court win for all of us. This as a federal court says no to a law suit that could have cost all of us a lot of dollars as we clicked our way across the World Wide Web. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--

U.S. District Judge Colleen McMahon has rejected a claim by the B-T Group that it owns the patent on those single-click hyperlinks that make the Web what it is. It’s lawsuit accused Internet service provider Prodigy Communications Corp., of infringing on the B-T patent.

But Judge McMahon rejected the claim that each Web server on the Internet is a central computer and thus the Internet falls within the patent's scope. Her decision, filed in a White Plains, New York Federal Court concluded that no jury could find that Prodigy infringes on the B-T patent.

The B-T suit had been viewed as a test case that could have opened the door for the company to challenge other Internet service providers and demand licensing fees. These fees could have added a lot to the annual cost of anyone surfing the net.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.
--

With the potential of billions of dollars at stake, its not known if B-T Group will appeal the judges decision or re-file the case. (Published news reports)

**

HAM RADIO TRAINING: AMATEUR RADIO LICENSE GUIDE – THE PROGRAM

Stuart Cole, N5LBZed, tells us by e-mail about a computer program that he has just finished writing. Its called "Amateur Radio License Guide" and is a modern update of the DOS version that he brought out back in 1999.

According to Cole, the program is based on the official ham radio question pool, is divided into three sections and does cover training all classes of license. More information is in cybrspace at http://cableone.net/sacole/ (N5LBZ)

**

THE WORLD ABOVE 50 MHZ: WRITER ASKS YOUR HELP

Gene Zimmerman, W3ZZ, says over the VHF Reflector that his next World Above 50 MHz column in QST Magazine will include a discussion of VHF+ clubs and groups. This refers to weak signal groups that meet regularly, VHF groups that sponsor annual conferences like Central States VHF Society, contest groups and others interested in the non-repeater world of VHF and UHF communications.

Gene says that he has already mined a lot of data from Internet sites but I would like his information to be accurate and up to date. He has identified the PackRats; the Rochester VHF Group, the South East V-H-F Society and about a dozen others as falling into this category. He asks that anyone connected with these groups please contact him by e-mail to confirm the information he already has. He also wants a person or point of contact to send readers to if someone wishes to find out more information about how to particular group. Gene’s e-mail is w3zz@arrl.org. (VHF Reflector)

EMERGING TECHNOLOGY: AM MODULATION IMPROVEMENT ANNOUNCED

A new modulation technique for AM broadcasting is being promoted by broadcast industry pioneer Mike Dorrough, KO6NM. Dorrough claims the Advanced Modulation System can increase carrier modulation to 200% while improving the performance, range and sound quality of Amplitude Modulated radio.

According to the CGC Communicator, KO6NM recently discussed the system at an SBE meeting in Sacramento and plans other presentations.

Ross du Clair, WA6VWY is the Chief Engineer for Clear Channel in Sacramento. He attended the Sacramento meeting and is quoted in Radio World On-Line as saying, "This is real and it does work."

As previously reported, Mike Dorrough was the recipient of the National Association of Broadcasters Radio Engineering Achievement Award in 2000. This, for his contributions to audio processing and signal monitoring. Details of the new Advanced Modulation System will appear in an upcoming issue of Radio World magazine. (CGC Communicator)

**

EMERGING TECHNOLOGY: PERSONAL LOCATORS FOR KIDS

In the wake of multiple child abductions, parents are turning to satellite-based locator bracelets to track their children. The bracelets carry transponders that will permit parents keeps tabs on their kids over via the Internet or by telephone.

Wherify Wireless plans to release its three-ounce G-P-S equipped Personal Locators next month. The device uses satellite and cellular technology and has a built-in numeric pager. It allows the wearer to contact an emergency law enforcement service in worst-case scenarios

Each unit costs 400 dollars and is accompanied by about 30 dollars in service fees. Experts on missing children warn such devices are not foolproof and could give parents a false sense of security. Still many parents are willing to try the locators a try. (Scienceonline)

**

RADIO IN SPACE: SOYUZ FLIES AGAIN

Some good news for the astro-ham team on board the International Space Station. The Soyuz rockets are flying again.

On Wednesday October 30th a manned Soyuz rocket with three cosmonauts on board blasted off from Russia's Baikonur cosmodrome bound for I-S-S. The Soyuz-TMA booster rocket lifted as planned at 03:11 GMT with no reported malfunction on its way to orbit.

As reported last week, the launch of this Soyuz was delayed after the fatal crash of a similar design unmanned cargo rocket October 15th. During this Soyuz 12-day mission, the Russian and Belgian crew will replace a rescue capsule docked at the ISS. (Published reports)

**

CONVENTIONS/HAMFESTS/CONFERENCES: MARTLESHAM MICROWAVE IN NOVEMBER

Turning to the ham radio conference scene, work that the Martlesham Microwave Round Table 2002 will be held this year at Adastral Park, Martlesham Heath, England. The dates are Saturday the 9th and Sunday the 10th of November.

Highlights include a visit to the Royal Air Force’s Defense Radar Museum at R-A-F in Neatishead and an evening dinner in Ipswich. All of this plus the usual flea market, lectures and the UK Microwave Group Annual General Meeting. For ore information e-mail g3xdy@btinternet.com (GB2RS)

**

CONVENTIONS/HAMFESTS/CONFERENCES: EUROPEAN RADIO SYMPOSIYUM IN BARCELONA

The 2002 European Radio Symposium is slated for November 13th in Barcelona, Spain. Convergence, digitization and electronic audience measurement will be key topics tackled in this symposium. Speakers include David Rogerson of Strategic Media Solutions. (Media Network)

**

CONVENTIONS/HAMFESTS/CONFERENCES: BIG TURNOUT FOR ARRL/TAPR DCC

According to a recent ARRL Letter over a hundred the worlds most active Amateur Radio digital enthusiasts turned up in Denver, Colorado, September 13th to the 15. This, for the 2002 joint ARRL and TAPR Digital Communications Conference.

This marked the 21st such Digital Communications Conference held. The agenda ranged from Automatic Position Reporting System topics to high-speed digital networking and software-defined radio. All agree it was well worth the trouble of traveling to the mile-high city to attend. (ARRL)

**

DX

In D-X, word that 3D2AG, will be working on Rapa Island through the 28th of November. He plans to operate as FO5RK on CW and SSB. This, during his late afternoon, nighttime and early morning hours. Rapa is part of the Austral Island group. (RSGB)

And SMZ0WKA is in Cuba until the 10th of November and is active as T48W. Look for him on 160 through to 6 meters, with an emphasis on the lower bands. QSL this one as directed on the air. (RSGB)

**

THAT FINAL ITEM: W6XYZ/KTLA AT 60

And finally this week, one of the nations pioneering television stations is in the midst of celebrating its 60th anniversary. That station is KTLA television in Los Angeles. And almost from its inception, ham radio has played a role in its success. Roy Neal, K6DUE, takes a look at KTLA and some of the hams who helped it to make history:

--
DATELINE “HOLLYWOOD.” ON A HIGH AND WINDY HILL, OVERLOOKING THE FAMOUS DISTRICT OF LOS ANGELES, IN GIANT BLOCK LETTERS, THERES A SIGN THAT READS HOLLYWOOD. AT THE TOP OF THE HILL, THERE’S ALSO A RADIO TOWER WITH A HISTORY. THAT’S THE SITE OF THE FIRST TELEVISION STATION WEST OF THE

MISSISSIPPI.

IT WENT ON THE AIR IN SEPTEMBER OF 1942 AS W6XYZ, AN XPERIMENTAL TELEVISION STATION WITH STUDIOS ON THE PARAMOUNT FILM LOT. IN OCTOBER OF 1942. THE STATION EVEN BROADCAST INSIDE A MOTION PICTURE STUDIO, FEATURING THE MOVIE "THIS GUN FOR HIRE."

BY 1946, W6XYZ WAS GONE, REPLACED BY THE CALL KTLA. THE GUIDING GENIUS BEHIND THE STATION WAS KLAUS LANDSBERG, WHO CAME TO THE UNITED STATES AFTER ESCAPING FROM NAZI GERMANY. IN THE LANDSBERG BOOK, NOTHING WAS IMPOSSIBLE. SO KTLA RACKED UP AN IMPRESSIVE LIST OF FIRSTS WHILE PIONEERING TELEVISION.

ON THE FIRST OF JANUARY, 1946, THEY BROADCAST THE TOURNAMENT OF ROSES PARADE…LIVE. IN 1955, KTLA BECAME THE FIRST LOS ANGELES STATION TO BROADCAST THE PARADE IN COLOR.

IN MAY OF 1952, LANDSBERG DROPPED RELAY STATIONS ON MOUNTAIN TOPS TO BEAM AN ATOMIC BOMB TEST FROM NEVADA TO LOS ANGELES. HE CALLED IT OPERATION BIG SHOT.

AND IN MAY OF 1958, BUYING EQUIPMENT FROM NBC, KTLA WENT ON THE AIR WITH ITS TELECOPTER…A HELICOPTER EQUIPPED TO COVER LOS ANGELES FROM THE AIR!

ONE OF THE MOST POPULAR SHOWS LANDSBERG PRODUCED WAS LAWRENCE WELK, A PROGRAM THAT STILL EXISTS IN SYNDICATION.

MANY OF THE STATION'S ENGINEERING STAFF WERE RADIO AMATEURS. FOR EXAMPLE, THE INVENTOR OF THE HAM RADIO REPEATER, THE LATE ART GENTRY, W6MEP. THIS REPORTER REMEMBERS MANY FUN TIMES WHILE TALKING WITH THE AVUNCULAR MR. GENTRY FROM THE REPEATER SITE ONCE OCCUPIED BY W6XYZ.

IN 1964, FILM AND TV STAR GENE AUTRY BOUGHT THE STATION AND AMONG THE ENGINEERS HE BROUGHT IN WAS LOYD SIGMON, W6LQ. "SIG" IS PROBABLY BEST KNOWN AS THE FATHER OF THE SIGALERT TRAFFIC MONITORING AND PUBLIC ADVISORY SYSTEM.

W6LQ AND W6MEP WERE TWO OF THE BETTER KNOWN HAMS WHO HELPED KTLA AS THE STATION PIONEERED EARLY DAY TELEVISION UNDER THE GUIDING AEGIS OF KLAUS LANDSBERG.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE
--

KTLA is owned these days by Tribune Broadcasting and is part of the Warner Brothers -- or W-B Television Network. More important, its history is one rich in break-through technology and innovation. Its a pioneering station that made television happen. You can read more about it in cyberspace at the website you will find in this weeks amateur Radio Newsline report.

More on the fascinating history of W6ZYZ and KTLA is in cyberspace at http://ktla.trb.com/about/station/ktla-about-history1.htmlstory (Tnx K6DUE, CGC Communicator, others)

Really? How does a SSB signal propogate? How wide is a SSB signal?
How is it different from an AM signal? A DSB signal? How do you know
if you're still within your authorization? Safety?

Now I do agree that how long a fax images takes to transmit is
irrelavent.

> Also I have never looked down at the no coders. I encourage them to take a

Dee, I have never looked down upon no-coders either. However, when I
returned to the USA in December 1991, with my "technician" license, I
was thought to be a no-coder and did take a lot of crap from
"superior" hams. And why should you be upset with no-coders? I'm
not. Lots of people don't want to jump through unnecessary and
irrelavent government hoops.

Dick, I disagree that incentive licensing was a good thing, and I
disagree that the existing exams are less rigorous than the ones you

took. If anything, they are more rigorous.

I think we ALL lost in the last one. :-(

Too bad the FCC couldn't put it to a vote. IMHO, that would've been the truly fairest method. Poll ALL licensed amateurs as WE set the standard for OUR hobby/service. I work for a data processing co. and an election accross approx. 680,000 is not such a large feat.

he's "attempting" to learn it seldom
> happens.

Unfortunately, while I was learning and practicing code to increase my
copy speed, I bought in to the concept that code was good for me, that
I needed more code to be a real ham, and that I would be a failure if
I didn't achieve faster code speeds.

Those are all the principles that people like you put in my head.

Typical comment from the airhead section. Not all of us are contesters, nor are all of us
where we have our stations
available.

By such a lamebrained remark you show your total misapprehension of the entire idea behind
knowing Morse code.

> truly fairest method. Poll ALL licensed amateurs as WE set the standard
for
> OUR hobby/service. I work for a data processing co. and an election
> across approx. 680,000 is not such a large feat.

The creation, changing or deletion of FCC regulations
is NOT the sole province of already licensed amateur licensees.
Never has been, never should be, never will be.

That is no different than state laws on driver requirements.
There would be nothing fair about a "licensed hams only"
vote to determine amateur rules because it would ignore
the rest of the public that has the same "right"
to comment and be heard as someone already licensed.

As an aside, even if your proposal was done, would you "allow"
non-code tested hams to vote?

What about Novice and code tested techs
who only passed a 5wpm test?

In 1999 when the issue was open for comment,
No code tested hams plus those that only passed
a 5 wpm test constituted over 50% of ALL hams.

If the question to be voted on was elimination of 13 and 20 wpm
testing, then just what would you expect the outcome of the vote
to have been with over 1/2 of all hams not having a license
that called for 13 or 20 wpm?

Cheers,
Bill K2UNK

>>No I think the major problem with ham radio is whats wrong with our society.
>>Too damn many people wanting something for nothing. And for the most part
>>getting it.
>
> So, society has been "different" in the past? Nooooo.

Yesssssss...Society has made numeorous changes in the past century.
Unfortunately, not all of them good for civilization in general in all
respects.

Too bad you ween't concious for some of them.

>The thinking of this particular pro-code "society" is that everyone
>is supposed to think-enjoy-become-virtual behavorial clones to the
>"society" members.

Switch "pro-code" to snowboarders, surfers, dancers, x-boxers, etc, and
the same statement may be true of countless pursuits.

That you wish to abuse us with your insulting rhetoric as if we are the
only ones who don't want you (in particular) around is, well, rhetorical.

>That results in the insults and put-downs
> scribbled by the beepers against the NCTA.

This is cute...AND typical for you, Herr Putziness. You "disappear" (I
was hoping it was a stroke) for several weeks, then when you resurface, you
dive right in with insults and irrelevant insulting rhetoric of your own.

THEN you accuse OTHERS of "insults and put-downs". I guess you think no
one in this NG has the "vision" to see through your pathological lying and
Goebbelsesque writing style.

Whew....What an idiot.

> I will be an active opponent of such...as will, I believe,
> all other NCI directors.

As Founder and Lord High Commander of No Test International
(NTI), I personally take umbrage at this threat from NCI.

We, the multitudinous multitudes of NTI, think that,
in 21st Century America, personal responsibility is
the premier measure of fitness to serve in any
capacity, whether it be as an Amateur Radio Operator
or as President of the United States. And there is
no higher degree of responsibility than financial
responsibility, nor one so easily determined from
external sources. Those with the greatest sense of
financial responsibility, and therefore, moral integrity,
are those who have been able to accumulate the greatest
amount of personal wealth.

Consequently, we at NTI are in the process of petitioning
the FCC to abolish all operator licensing in the Amateur
Radio Service and to issue only station licenses to
individuals. The qualifications for such station licenses
will be:

1) Net personal worth in excess of $250,000 as verified
by one of the Big Three credit-reporting firms,

2) The posting of a monetary bond in the amount of
$10,000 to facilitate the collection of forfeitures
subsequent to the issuance of NAL's by the Commission,
and

3) Ownership of a parcel of real property greater than
5 acres in contiguous area and free from C.C.& R.'s
and/or zoning restrictions to allow for the construction
of an "effective" antenna system.

We at NTI firmly believe that these licensing changes will elevate the Amateur Radio Service to the high level of excellence it so richly deserves and which has been denied it so long by the discredited social-engineering policies of Incentive Licensing, No-Code Technicians and Slow-Code Extras.

>Removal of code requirement for lowest licence class is a good thing, it
>definately increased membership.

The initial changes to Amateur Radio were almost exclusively within
Amatuer Radio itself. Those who took advantage of the opportunity to "upgrade"
on April 15th 2000.

Yes, there was a brief surge of new licensee's, but the "growth" of
Amateur Radio has once again stalled at some miserly single digit rate.

>One factor is the lack increase in licence
>numbers is the lack of publicity. People aren't aware of Ham Radio, so they
>dont join.

Getting people to "join" is not the problem. Amateur Radio in the United
States is bigger than it's ever been. The problem is getting them past the
"rush hour" or "honey do" traffic on 2 meters.

>Also, the majority of Hams are appliance operators.

100% of CB operators are applicance operators. 100% of Gameboy players
are appliance operators. 100% of video fans are appliance operators. So what?
Those who want to experiment with new modes/bands/techniques do it...those who
don't, don't.

>Also, when they see a bunch of appliance operators, contesters, codeword
>users,
>they believe it is some strange (and uninteresting) cult.

Oh...? So the "codewords" used by model airplane flyers makes them a
cult? The "codewords" I use in the ER make ME part of a cult? Using
"ten-codes" make police officers a cult?

Every hobby, professional pursuit, sport, etc has "codewords". Ever watch
Monday Night Football? Whew! Talk about "codewords".

>As a result, the technically savvy people you mention do not become
>interested
>and do not join.

Bravo Sierra. Lennie the Liar espouses his "remove the code and they will
come" rantings about his alleged "professional" radio buddies just waiting in
the wings to join Amateur Radio. However codeless access to over 97% of all

Amateur Radio allocations has been in place since February of 1991, yet there is no bulwark of "professional" Amateurs in the ranks.

If that "technically savvy" subset is waiting for that last 3% to be codefree, then all they have wasted is thier own opporutnities. Too bad for them.

>Why not include such activities at club meetings? Or make Field Day more
>technically oriented?

Why don't YOU make it more "technically oriented"...? YOU set up a sun-powered station. YOU set up a wind generator. If no one else wants to do it, YOU do it, but don't sit around whining about what "they" don't do....YOU do it.

>For those interested in radio direction finding, kit building, design
>projects,
>test equipment operation, troubleshooting projects, AND antenna setups, I
>propose the following new type of club. How about an Amateur Radio
>Experimenter's Club?

How about advertising in "QEX" and see what happens? Why not stand up during the "New Business" part of the next "regular" club meeting and propose exactly that?

>I have mentioned this before. I dont feel this exists in Ham Radio today.
>(Perhaps in the past). I dont feel QRP clubs qualify as it is too codeword
>using, and tends to emphacize CW.

What "codewords"...? And CW is emphasized because it is uniquely suited, along with PSK31, for very low or extremely low power operations. That's surprising?

>I am in the MA/NH area. I have several interesting project ideas, parts,
>equipment,etc. Anyone interested in this type of club?

You're in the wrong forum to get any serious or significant response. Get an ad in QST, QEX, CQ or Worldradio.

I wouldn't worry about it, Mike. When one considers that most of the repeaters are laying quiet now anyway, it couldn't be a bad thing to double the size of Amateur Radio...not that it will happen.

My bet is that even if we dropped the code test today, once we got past the first 90 day "honeymoon", we'd be right back to our single digit growth rate. I seriously doubt Amateur Radio will ever top 1M licensees and it will never see that many ACTIVE licensees. I bet that dropping the code tomorrow would see us get to 750K and top out there.

Revisionist History!!!

You both were mad as hell at the time and took NCI very seriously.
Now its all spilled milk and soured grapes.

You need a better cover story.

Next?

We don't need millions of hams. We need about 500000 of on the air operators. That will stop all the crabbing about 'numbers'. If 1/10 th of the presently licensed operators would fire up on one weekend a year it would make the CQ World Wide Phone contest sound like a low QRM event.

And I remember when an EXTRA license actually meant something. All it is now is.....well you fill in the blanks.

Sorry, Hans. I'm continuing my boycott of ARRL contests over the issue
of doing away with Section News and contest line scores in QST. I'm
also withholding donations of funds for any purpose. The introduction
of the "Diamond Club" makes it likely that the boycott will continue for
a long time.

I might decide that paying my taxes is unnecessary and irrelevant. I
might decide that the speed limits are unnecessary and irrelevant. I
might take it into my head that the secrecy forms I signed when joing
the Foreign Service are simply government hoops.

How did you come to take "crap" from other hams? Did you walk into a
conversation with that omnipresent chip on your shoulder or were they

giving you guff about bootlegging from Somalia?

Dear ARRL members and Nickel extra's,

I'm running for a position on the ARRL Board of Directors.
I've been a ham since 1987 and an extra class since
1989. I've always worked and wanted what is best for amateur
radio, but now I see the light. If you elect me to the ARRL Board of
Directors, I promise I'll voluntarily stick my head up my ass like all
previous and current ARRL Board members have done since 1997, and I promise to
work with my colleagues on the Board in their continuing efforts
to further dumb down amateur radio.

Thanks for your support

http://www.adrenalineadventures.net/news/330.html
And find nearly 20% of americans are obese
QUOTE:The 2000 national obesity average of 19.8 percent is up from 12
percent in 1991, according to a government survey. Twenty-two states had a
rate last year of 20 percent or higher, while no state had a rate that high
in 1991, the authors said in Wednesday's Journal of the American Medical
Association.

According to the statistics you quoted only 18% of hams owned up to
obesity -- less than the national average !!!!!!

So why would you single out Amateur Radio Operators ???

Besides what the hell difference does it make ???

Take your generalizations to rec.obese.overweight -- perhaps

Rod 6'1" 71 years old and 195 lbs.

This kind of uninformed post places a bad rap on Amateur Radio -- why do you
want to do this ????
-
I Doubt, Therefore I Might Be
73 From AC6V, Rod In Oceanside, CA
http://ac6v.com
==========
THEN SOMEONE CHOPPED IT UP SO APPEARS I MADE THE FIRST POST --
I Only informed him that about 20% of the population is classified obese and
his stats showed hams about the same or a little less.

Odds are there are more than a handful of good new hams that might
otherwise not have become hams. Beyond that, I don't have any
need to justify.

More to the point, just what has ham radio lost?

Cheers,
Bill K2UNK

Brian, you may have this person confused with another, newer
radio amateur from Missouri...the one who "saved his entire
brigade (about 4000) in Vietnam" with a trusty AN/PRC-25
voice-only VHF radio.

According to Carroll's previous messages he was trained (at
Fort Monmouth, NJ) in television production as a member of the
US Army Signal Corps. He did not indicate any re-enlistment in
those messages, nor did he indicate any US Army experience
in HF communications of any kind.

When I went to the Signal School at Fort Monmouth in 1952 (before Carroll), there was no such school as "television production" nor was there any MOS for that. No "whiners" were tolerated there in 1952 nor much of the US Army up to 1956. Apparently the US Army tolerated TV whiners later?

US military draft ended on 27 Jan 73. For 29 years the US military has been entirely voluntary. One cannot say the same for morse code testing for an amateur radio license having privileges below 30 MHz. The PCTA is still "at war!" :-)

>approx. 680,000 is not such a large feat.

Not logical from the FCC's regulatory task. The FCC is empowered
by law to regulate ALL US civil radio. ALL of it for approximately
300 million citizens. Much of the spectrum allocated to radio amateurs
is shared with other radio service users, some of those radio services
are government or military and are not directly regulated by the FCC.

There are several mechanisms for communicating with the US
government. The FCC issues Notices of Proposed Rulemaking or
NPRMs and invites comments from all citizens. The FCC does
consider all such comments. Reports and Orders (R&O) when
published describe many such comments. Comments on NPRMs
are public documents. Comments are not restricted to directly-
affected radio services but may include all radio service users or
citizens who are not directly affected by such NPRMs...or even
R&Os. Nothing is "secret" (as in voting), all is out in the open.
That process on regulatory decisions is about as democratic as
any law-making process can be in my estimation. It has worked
well for decades.

There is also a quasi-governmental process in establishing test
question content. For US radio amateurs this is the VEC
Question Pool Committee. All in the VEC QPC must be licensed
radio amateurs. FCC approves or disapproves questions and
answers and does not even specify a certain percentage of questions
to be about specific subjects. Relatively recent Part 97 changes
have enabled that. All the FCC requires is a total number of test
questions and the minimum number of correct questions required

to pass a written test element. The choice of questions is left up to the VEC QPC.

A democratic process has already been established in US amateur radio. No "nationwide vote" ONLY of members in a specific US radio service is required.

Restriction of "voting" would not be to democratic process principles considering that many US amateur bands are shared with other radio services, some of those being prime while amateurs are secondary users. To have a fair vote, those other radio services must also be allowed to participate in the voting.

>
>Actually the arguments that are being used to eliminate the CW requirement
>can also be used to eliminate all but the FCC rules from the amateur tests.

That's not logical from the standpoint of the single government agency tasked with responsibility of regulating all US civil radio. The FCC makes the regulations...of ALL civil radio users in the USA...and those radio services must all coexist on the EM spectrum, often sharing allocated bands.

FCC amateur radio regulations give extraordinary freedom of amateur radio activity compared to all other radio services (possible exception with Part 15 devices). The FCC does NOT mandate exclusive OOK CW use on any HF amateur radio band; the only exclusive CW allocations are two small slivers of bands above 30 MHz. Radio amateurs in the USA are free to exercise their optional choice of any allocated mode.

The FCC has chosen licensing as one tool in their overall regulatory task. That overall regulatory task involves all US civil radio and the FCC must consider all radio services in establishing regulatory requirements.

>Afterall why should a person answer any questions about PSK, RTTY, Amtor,
>Packet, propagation, eletronic theory, and so on when all they ever intend
>to do is pick up a mike and talk. If CW is irrelevant so is everything else
>but the FCC rules.

No. The FCC does not mandate exclusive OOK CW use by any licensed radio amateur...therefore the rationale for continued morse testing disappears.

As long as the FCC mandates specific technical requirements on transmitters, that justifies test questions in regard to available modes and modulations. Within the limits of an amateur radio license, any US radio amateur is free to choose any allocated mode/modulation.

>This is the road to complete chaos.

Subjective opinion.

Many radio amateurs considered the establishment of Citizens
Band radio, class C and D, in 1958 to be "chaos." That was 44
years ago, two generations since. There was never any test of
any kind for CB, the initial licensing a formality for the first few
years.

>Also I have never looked down at the no coders. I encourage them to take a
>stab at upgrades including CW and would happily elmer any who wanted me to.
>Instead too many (not all) would rather wait until the requirements are made
>easier, "dumbed down". So why should I not be upset. I've offered to help
>and gotten no takers.
>
>Dee Flint, N8UZE

Having started in HF radio communications in early 1953, I've never
had any reason, requirement, or specification (for electronic design
engineering) to use or specify any OOK CW. Except for maritime
radio services within the territorial boundaries of the USA, no other
US radio service requires any morse coding proficiency. "CW" has
been on the decline for a half century. "CW" does not indicate any
proficiency in radio communications other than manual telegraphy
skills that came into communications in 1844. Radio as a com-
munication medium began in 1896, using on-off keyed codings
because that was the only way to transmit intelligence over primitive
radio.

I cannot fathom this "attachment" to an archaic human skill that can
be done by only a small percentage of humans. There is NO valid
justification for tested, demonstrated skill in morsemanship for any
radio license having privileges of operation below 30 MHz...except by
an equally-archaic ITU-R recommendation, S25.5.

>Did you happen to tune a receiver to any of the CW portions of any HF
>bands this weekend, Leonard? That obsolete skill was in use by
>thousands of folks.

I did not. Why should I? "CW" skill was only demonstrated in
amateur radio this weekend.

Amateur radio is the only radio service in the USA that has any
OOK CW regularity. Other than maritime radio within the borders
of the USA, morse codings are not required by test or use in any
other radio service. Regularity is beneficial?

As Bill Sohl pointed out, many thousands of antique/classic car
owners enjoy restoring and driving their vehicles...but the regular
vehicles on the roads are modern, efficient ones.

There is a rivalry between Southern California and Arizona as to who
has the best stagecoaches...but only in the motion picture industry
(a billion dollar business in this corner of the country). Those
stagecoaches are built with care of the finest available material for
their purpose. Stagecoaches were once a mainstay of transport in
the western USA. Stagecoaches are no longer used in any public
transport. A few parks have them for amusement of a few.

There are about as many members of the Academy of Model
Aeronautics as there are in the American Radio Relay League
(about 170 thousand). The AMA has never claimed or stressed
any importance or close ties to modern aeronautics...modeling is
a hobby, a recreation involving flying, and includes contesting.

>By the way, haven't you described yourself as a radio expert hereabouts?

No. I've described myself as a professional in radio and electronics,
which is true...I just don't work regular hours at it now.

I took a two-hour test at the Chicago FCC field office to pass a First
Class Radiotelephone (Commercial) license exam in 1956 after
spending three years of active military duty at US Army HF radio

station ADA at Tokyo (ADA transmitters had 43 of them, ranging from 1 KW to 40 KW output). I've gotten paid (fairly well) as an electronics design engineer in the aerospace industry, on RF ranging from VLF on up through Ku-band. One USA patent in radio (sole inventor, assigned to RCA Corporation). Contributor and Associate Editor at Ham Radio Magazine over a five year period. I've been a hobbyist in electronics (not necessarily just radio) since 1947. I know fairly well how radio works.

Am I an "expert" in radio? No. Never claimed that. I've never taken any morse code proficiency test...therefore I cannot ever be an "expert" about amateur radio. Further, I've never had to use, or even build into any electronic design any OOK CW coding capability between 1960 to now. 42 years. No need.

Amateur radio seems to be a fun hobby involving radio. Why does Heil obviously troll with personal insinuations about "expertise"? Does he feel threatened by those with more technical knowledge and experience than he in radio? [rhetorical question]

DICK, DICK, DICK. I thought that this was the mode that you could use
from anywhere, with scrabbled together odds and ends, that doesn't
even need much in the way of propagation?

And you're always prepared, right?

> By such a lamebrained remark you show your total misapprehension of the entire idea
behind knowing Morse code.

Misapprehension? Was I wrongly arrested?

I worked lots of kids with those Heath lunchbox. I got me a Heath sixer here and it still works fine.

Remember how you would call CQ for ten or more minutes then announce what part of two meters you were listening to for a call? Those old rushboxes made tuning e a s y hi. Unless you had two or more stations on the same band that is... hi.

>must also be allowed to participate in the voting.

Lengthy diatribe on the regulatory process noted.

The comments made were relative to the regulation of the Amateur service,
NOT other services which may cohabit our bands.

>A democratic process has already been established in US amateur
>radio. No "nationwide vote" ONLY of members in a specific US
>radio service is required.

He didn't say anything about it being required, and clearly expressed it
as an opinion.

>I did not. Why should I? "CW" skill was only demonstrated in
> amateur radio this weekend.

No it wasn't...it's demonstrated EVERY day. An active member of the
Amateur Radio service would know this. Even an unlicensed ACTIVE SWL would
know this.

>The AMA has never claimed or stressed
> any importance or close ties to modern aeronautics...modeling is
> a hobby, a recreation involving flying, and includes contesting.

But one that does NOT have a codified requirement to provide certain
services as a part of its regulatory structure. I know you like to ignore the
truth, Your Geezerness, but refer to 47CFR97.1 for this rule.

>>By the way, haven't you described yourself as a radio expert hereabouts?
>
>No. I've described myself as a professional in radio and electronics,
>which is true...I just don't work regular hours at it now.

No, you've used the word "expert" on occassions too numerous to count. A
lie, Herr Anderson...a lie.

>I took a two-hour test at the Chicago FCC field office...(SNIP)

Yet another opportunity to delve into his resume.

>Am I an "expert" in radio? No. Never claimed that.

Yes you have. Another lie in the same post.

> I've never
> taken any morse code proficiency test...therefore I cannot ever
> be an "expert" about amateur radio.

You could not be an "expert" on Amateur Radio if HPM himself tatooed his
callsign on your butt.

>Amateur radio seems to be a fun hobby involving radio. Why
> does Heil obviously troll with personal insinuations about
> "expertise"?

Ity's not a troll if it's true. You've said it then denied it hoping that
the uninformed or unaware would be impressed with your humbleness or humility.

Unfortunately you are just humiliating.

>Does he feel threatened by those with more
> technical knowledge and experience than he in radio?

Since it's you we're talking about, I doubt he does.

Why should you? Because it might preclude your making similar false statements. All of amateur radio's modes were likely in use over the weekend but the Sweepstakes CW 'test would have provided you wall to wall signals--none of which you would have been capable of decoding without assistance.

> Amateur radio is the only radio service in the USA that has any
> OOK CW regularity.

Good thing this discussion takes place in an amateur radio newsgroup then.

> Other than maritime radio within the borders
> of the USA, morse codings are not required by test or use in any
> other radio service. Regularity is beneficial?

You can take that up in a maritime radio newsgroup.

> As Bill Sohl pointed out, many thousands of antique/classic car
> owners enjoy restoring and driving their vehicles...but the regular
> vehicles on the roads are modern, efficient ones.

Amateur CW use doesn't usually fall into the antique/classic category, though it can. Most morse communication takes places with modern, efficient equipment.

That's fine for stagecoaches. Morse is used now by thousands on a daily
basis.
Maybe you've heard about it.

Ah ha. Yet I recall no licensed radio amateurs here calling themselves
experts in radio. I can only recall you giving them the title in
derision. Yet some of those individuals likely have as much or more
knowledge of radio than you. They are also radio amateurs.

Why does Heil troll? Funny line, Len. Yours was the troll and it was you--the guy who is only interested in removing morse testing in the amateur radio service (in which you are not a participant)--who showed up with the caustic comments after frequent outpourings of your desire for civil debate. You're pathetic.

Yes, indeed.

And DICK whines that he wasn't where his station was. And I thought
he said a CW station could be cobbled together from a chewing gum
wrapper and a singing Hallmark card.

In any case, its supposed to be real easy for any of the old timers.

Thanks for the link, Dick. Thing is, I thought that the spark gaps did make a tone from the damping of the spark. I seem to recall a sound file of this at some point in the past.

Is it possible that I am confusing this with the huge alternator stations?

I think Dick and Jim have already told how inventive licensing was
foisted upon the amateur radio service by hams inside the FCC. I
think they've done enough damage to the ARS for one century.

Note that if the average ham keeps his license for 40 years before tiring of it or kicking the bucket (the 40 year number is the best match for the rate of license expiries observed in the AH0A numbers), then it requires more than 1400 new licensees per month just to keep the total number of hams from shrinking. In the period since restructuring the ARS has been attracting new hams at slightly higher than this rate. Almost 50,000 of those 684,355 hams, or about 7% of the total, obtained their license after restructuring, so there have indeed been "tens of thousands" of new hams gained.

Unfortunately the more interesting question, which is what the 50,000 number would have been had the high-speed code tests not been removed, is impossible to answer with certainty. One can only speculate.

> We were supposed to experience a Digital
>Revolution in amateur radio that would give us virtual internet-like data
>transfer capabilities, without any user fees! What happened???

I think they only restructured licensing and license requirements, but not physics. Whether the end result of restructuring on technology used by amateurs turns out better or worse than it would have been without restructuring is, however, another of those questions whose answer cannot be known. You need to know two outcomes to make a comparison, but we'll

only know the outcome with restructuring.

That isn't what I referred to and you SHOULD know it, assuming your kids aren't doing your reading for you (good
possibility). He recited a case where he and others in his area used CW on the air during an emergency when other modes
couldn't handle the job. But you always ignore reality.

I believe you are. The Andresson (sp?) generators (one is still fired up on occasion to make commemorative transmissions on LF) actually ran at a radio frequency, if I got it right, while the spark rigs used a tuned circuit to resonate the energy contained in the spark that occurred in the region of the tuned circuit's resonant frequency. That accounts at least in part for why they were so broad. The bandwidth would have been limited partly by the Q of the tuned circuit.
There were also more than one type of spark transmitter, and they didn't all sound alike.
Mind you, I'm certainly no authority on spark. Just read some on the subject. :-)

Yup. There are only three topics here. Morse Code, Character
assassination related to Morse code, and lately the strange general
character assassination of a group who just plumb hate each other.

I pay a little attention to the group, but it's just because hope springs
eternal. Perhaps there will be something really relevant to policy here.
But I've been dissapointed.

On the same topic, whtever happened to "RFI" our ARRL connection? Maybe
he gave up on the group too.

Steve, I think the reason Mr Vshah doesn't do this is that (I strongly suspect) he isn't a ham. I've asked point blank if he was, and get no reply.

And if he is, you question is very well put. No one is keeping him from doing this. I suggest reading some books, doing a little surfing on homebrewing, and then letting 'er rip.

Probably correct, Steve. Let's face it, there will probably never be a
large segment of the population who ever even think about becoming hams.
It just isn't that sort of hobby. Not that that is a bad thing.

At this point, it might be interesting if Jim could get us some idea of
number of Hams as a percentage of total population. Care to chime in, Jim?

I wonder what speed a person could manage on that key? I presume that the sound was made with the key, and once you got past the CQ, it was pretty rough.

Does wireless networking reliably cover paths of tens of miles from one TX/RX site to another? Packet does. Signal strengths that are below useless for FM/SSB voice can still carry packet messages with perfect copy. Packet is a perfect low-tech communications solution for emergency situations -- just like CW.

Its been a while since Lance Bass has "been a Ham."

How come Ham Radio membership did not increase due to this celebrity? And how come Lance dosn't proclaim he is a Ham? Its not in the news.

Guess that the idea that this was supposed to increase the number of young Hams is now stale.

I don't know why it should. The in thing now is something for nothing. Why study when you can buy one of those 'export' radios with all the uppers and lowers. No wonder so few folks buy ssb rigs. Despite the superiority of ssb over am, that danged 'clarifier' sure is tough to learn - and who wants to learn?

<unk><unk><unk> 73, de Hans, K0HB
--
Help support youth involved in Amateur Radio.
http://www.mnyarc.org
http://www.k0bsa.org

The following, written by a wise ham, is about 4-5 years old,
but it bears repeating here.

Enjoy

73, de Hans, K0HB

---Begin Forwarded message---

I am an Extra. I was proud of it. I had
a certificate on the wall issued by the FCC to prove it. Then
in 1968 along cam incentive licensing. That was in a previous life,
because in 1968 I died and became a bigot. I thought that incentive
licensing was the final acchievement, the culmination and triumph
of my being a better radio ham than lowly generals or conditionals.

I gloated with glee when the generals were kicked out of half of each
band. I gloated that I could now operate among my own peer group
on 14, 205. I even could gloat of my linear amplifier and my
102 ft tower that made my signal something to be reckoned with. I
won the CQ WW WPX contest (for Alaska) one year. Oh, man, I was
on top.

But in 1996, folks, the fellows from the local club came to me.
Ramon, help us out. You are an Extra. We need a VE. So I said
okay, I'll go see what these lowlifes are up to and put an end to
this nonsense.

But, it didn't work out that way. I was converted. I saw the light.
I saw that these guys weren't low lifers, they wanted to be HAMS.
I had to recognize that you can't really build the equivalent of
a TS-450. In the old days, CW was the state of the art, you mostly
built your gear. CW testing was appropriate. So I said to myself,
lets hold your tongue and see what these guys are up to. So the club
went on to create a whole new generation of radio hams. These guys

are good. They are polite, they say "roger" and not "10-4 good buddy" They say "Is this frequency in use, or is anyone listening on the repeater, instead of "breaker-breaker 19". In other words, these guys CARED for ham radio, its traditions and its values. They wanted to BELONG.

Okay, I said, lets go ahead and get the exams from the Anchorage VEC and put them to the test. Sure enough, they got licensed and are now on the air. Their calls are a giveaway, like WL7CSG, but by golly, you couldn't tell them apart from a real ham otherwise. And why can't you? Because they ARE real hams.

What about the code? Well, like homebuilding it has its time and place. Nowadays a TS-450 costs the same as an old DX-100, or BC-610 or some old time monstrosity. These guys want to get on the air and enjoy the hobby. Go moose hunting, fishing, picnicking and keeping in touch with the crew back in town or over the next hill. Sounds no different than me! Must be real hams. Many have expressed interest in HF. They know the code is a requirement. And they wonder why. They do not intend to use CW. Why take a morse test? The FCC does not give a public speaking test before they allow you to operate on 20 ssb. Why not? Because at the time the test was devised CW was the principal mode, phone was an oddity for experimenters, and the FCC tested in appropriate areas.

But somewhere along the line this principle became corrupted. It has become a symbol of elitism, bigotism, intolerance. And the saddest part is I am a CW man. I like being on 14,005. I like to chase CW DX. But browbeating some one else for what I like is not proper. No sir. Lets test what needs to be tested, and not test what does not need to be tested. Have no fear of the no coders, for they cannot intrude in the cw subbands unless they know the code.

Now if someone was proposing to do away with CW, or eliminate the separation of the various incompatible modes to the detriment of CW, then I think that by golly, I would deem that very prejudicial, elitist, or bigoted and LOUDLY would I protest. But the Code TEST is a different thing altogether. It bears no relationship to what goes on in the cw bands. We did not learn the code at the FCC office. We learned it at home or, in my case, at an old man that was my elmer. When I took my code test for novice in 1959 I was qualified to operate CW. If there had been no use for CW, I think that with a bit different training I could have been competent to operate on 20 meters a.m. phone. But I was trained on CW. That was the core of amateur radio back then. AS a young child I ran wires all over the neighborhood and hooked up telegraph keys and sounders to other similarly minded kids homes. Lots of fun. But today, CW is not what the public expects of amateur radio. Times have changed. I have changed. I have seen the light.

And as for my Extra class license; all of a sudden I am not ashamed of it anymore, because a few months after my eyes were open I realized

that was not a prejudiced s.o.b. upper-class-bigoted-elitist Extra. No sir. I was instead a VE, a teacher, a person around which people gathered to learn from. Sure, I am human, I love the attention and probably some praise, but my attitude about me being BETTER just vanished. Better is relative.

The cycle of life goes on forever. Babies are born, old men die. The torch passes on. The teenager that we are so sure just "doesn't have it" "or it was different in my day" soon enough becomes the daughter of my grandchild. Soon enough she is 28. I am an old man. Soon enough I will die. And I sure do not want people to think "thank god that old idiot died". No, I want them to say, "my teacher, my Elmer died. I learned a lot from him. And when his time comes, and we as a hobby have evolved into maybe faster than light commo to the stars, using some exotic techniques and modes, the PRINCIPLE will still exist and carry on.

Do we make fun of Marconi because he implemented the coherer detector and the spark transmitter? (I do not say invented). Do we make fun because Sir Hiram Percy Maxim, W1AW, used a spark set? Of course not. In fact, those guys were brave souls at the cutting edge of technology. Think of it: the cutting edge of technology! Things have changed folks, lets get on the bandwagon.

1. Eliminate the code test.
2. Retain cw sub bands.
3. Eliminate incentive licensing.
4. Institute just two license classes. Entry level or apprentice, and full amateur with ALL privileges including the right to operate CW on the cw bands (if he learns how). This is not to create an elite crust, but to provide for an easy entry step.
5. Educate, and maybe test, our new hams in radio operating, ham traditions and values, on the air etiquette, radio lore, and maybe even the dreaded Order of the Wouff Hong! Or the Retisnitch.
6. Lets make each new ham someone we can be proud off, and say, "Hey, he is coming right along!"
7. Lets take over the ARRL from within and make it a society that all hams can be proud to belong to. Let them represent all hams, not just the members. Lets change the system from within. Lets get rid of the creators of incentive licensing.

And let us remember, that upon creation of the incentive licensing program, the Extra Class did not get ONE SINGLE kilocycle of spectrum space, or one single KC of phone band. No sir, what they did is took the existing generals and told them to get out of this portion of the band while us extras enjoy the new freedom from associating with the likes of you.

8. I am not sure yet, haven't made up my mind, but I think that this Vanity call sigh program is aptly named. Vanity. The FCC has always issued call signs in sequential blocks. Started with 1AA in 1922, then W1AA in '27 and now they are up to KD4

or some such. And hams dearly love their calls. Mine is shorter than yours because (insert your favorite excuse here). I am starting to think that this vanity call sign is somehow...smelly. What if the FCC made ALL ham calls 2 x 3, like WA6MNV, and then issued the calls at random. Maybe you and I take the license test same day, I get WA6MNV, you get KD6URL, and a week later the next new ham gets WA6AEF. It would just be the luck of the draw, a totally random, non-elitist call sign program, computer generated etc. No one could say, I am better, or have more years in service, or have done this on that, and that is why I am AL7X and you have the lowly call of WA6VSE or WL7CSG. This program would entail all brand new calls for everyone. Everyone. AT random. It would generate an instant protest, I am sure, but once done, its a done deal and a whole bunch of squabbling will end.

Just thinking about the above call sign deal, but you can see where I am leading to. A society where all hams are equal, and one that is blind to age, years as a ham, or the holder of a level of license class that is "better" and has "a better call" than that "low life no code over there".

If you think that is extreme, be assured that in the 1950's the W x 3 calls, like W2FCJ started running out (as a novice he would have been WN2FCJ). Anyway, the FCC got to W2ZZZ, and call area by call area went to the K calls. Formerly K calls were overseas territories, like K4 for Puerto rice, K7 for Alaska. The K x 2 calls like K2GM were mainland us calls, only K x 3 were territories. But the FCC freed this block of calls, by assigning KP4, KH6, KL7 etc to territories, and they started again all over with K2AAA until those were done with. Now, in the late 50's, the W2's had prejudice against the K2's. Remember when Dorothy, K2MGA worked or ran CQ magazine. Big furor. "She is a K2 not a W2!" Already the seeds of elitism had been planted.

There IS a place for elitism. You are elite, when your fellow hams look UP to you, and admire you, and want to be like you. As a teacher, a fine example. But a short call, an Extra Class license, 40 years as a ham, or blind, egotistical pride does not automatically make a person "Elite". That should be a status earned by each individual according to his own performance in society. Hiram Percy Maxim W1AW was not "elite" because he had a short call, one with the letter after number being A. And he was not elite because he was president and founder of ARRL, or because he wrote the Rotten QRM and other articles on Lids and poor operating practices. No sir. He was elite because he earned the instant respect of ALL amateurs when he was instrumental in getting allocations for ham operators from a government (navy) that wanted to keep it to themselves and control it, never share, and prohibit hamming. Now THAT is what he did, and he gave us all a wonderful gift, and in 30 years may

his work still be admired and be fruitful.

This attitude that "I passed a 13 wpm, or I passed a 20 wpm
code test, so I am better than you no code low life" has got
to stop right_now! There is, after all, an easy answer. Say
in my case, I became an extra in 1962 or 63 when the license
first became available. The test was all on a.m. phone, cw and
things like that. All gear was strictly tubes. But a new
ham in 1996 could rightfully say to me, and he would be 100%
correct in saying "So what Ram�n. 20 WPM, gee, that is good,
but is it relevant? I just took, and passed a test on
solid state rigs, VLSI chips, digital techniques, frequency
synthesizers, narrow band FM, SSTV television and beam antennas."

So, as far as a TEST goes, who is the better ham? Me, because
I took a 20 WPM test and a written on topics like heising
modulation, rf ammeters, and splatter on a.m. transmitters?
Or is he the better ham because his test was on the cutting edge
of the amateur radio art, even if it was no-code.

So think about this. In 1962 I took the prescribed test. It
was on techniques appropriate to THAT era. He took his test in
1996, and his test reflects THIS era, just like the test in
the year 2046 will have questions totally inconceivable to us
right now.

Maybe I am the poorer ham. After all, an old geezer with
obsolete knowledge. Now of course, I could say, but wait! I
have followed the radio art. I repair solid state 2-way
commercial radios, I am a computer nerd. I even build
plug in cards for my computers here (and some even WORK).
BUT all that is moot, because friends, we are talking about
tests, not what you know 30 odd years after the test.

So each of us is a full blown ham, and each one has proved his
worth by taking the latest version of the ham test at the
time it was given. He is a ham. So am I. He is proud of it.
I am proud of mine. But I am also happy and proud for HIM,
because instead of whining, complaining, etc., he buckled down
studied and passed this 1996 test. So he has proven his
commitment to the process of becoming a ham.

And that folks is that counts and what sets hams apart from
CB'ers who only follow the rule of instant gratification.

So when we say we must keep the code test, we have one word too
much in there. We should keep testing, yes, to prove the
commitment the individual has to ham radio. But to say that
Code, or for that matter a Triode Push Pull R.F. amplifier
with link coupling and neutralization is somehow better than
one on a DDS frequency synthesizer is totally ridiculous. Its
comparing apples to oranges. And I pray that in the year 2046

the test will be appropriate to that age and time, and that my great grandchildren will also sweat the test, spending countless hours studying and visiting the elmers, and finally get the ticket one October morning, and fire up their Franistat set, and work Rigel 6 on the first call! Now we are talking, fellows. Lets drop the narrow view and get this hobby of ours off its arse and moving ahead!

Ramon, AL7X. VE, CW man. Pro no-code. Anti incentive licensing. Proud of the hobby. Lets see it move forward. Respect all modes and facets.

Even if I chose to send in the morse code and general CSCE's, I still cannot operate HF as I do not have any equipment at this point for those frequencies, probably won't for quite some time......

PSK31 seems to have more usage around the area, but do not see anyone using it in the VHF/UHF+ ranges, as there is not much equipment out there other than FM, except for that RCI 6 meter rig..... Unless ya buy a multi-bander/do-everything rig.

Cheers,

I don't know if I would say that.... there is clearly a few idiots, but there are some good people here too. From time to time I get enough of value to continue to download the messages from this newsgroup into Outlook Express....

I kinda sorta see this group as a family..... albeit dysfunctional at times, but for the most part we get along.
For example, Larry Roll.... I don't hate or dislike him. I may not agree with him about certain things, and as well, he and I might actually agree on certain things too.... After all, on newsgroups, all we are, is just FONTS. I will make my own decisions about people here after meeting them, and talking with them for a bit. Text does not cut it as an all-inclusive decision maker for me..... Either way, newsgroups are more of an entertainment source for me, as I can peruse them while at work, and once in a while, I might find something worthwhile to learn too! (Never take sh*t on here toooooo serious, it is not worth it.)

Noooooo, Larry, it would still be just as useless. ANY noise whatever busts packets as they are sent. So few are acknowledged that a successful transmission is virtually impossible. Retry, retry etc etc etc, timeout. That's all you get.

When I was doing serious packet, I tried everything I could come up with to make it better. No go. I recall actually making a single successful QSO, on 40 meters with a ham in Brownsville, Tx. The band was exceptionally quiet, not a bit of noise. I'm sure I don't need to tell you that is extremely rare.

Those ops got to be pretty good at it. And it was dangerous because in most installations the key had high voltage on it. Some of those old brasspounders could really crank it out with a hand key, as did the Titanics ops after the the ship struck the iceberg, and the op on the Carpathia which rescued the survivors. He handled a huge amount of CW traffic as the ship sailed on to New York.

What was sent in the sample was "CQ de PN".

>

The only flaw in that thinking that I'm familiar with is the fact that there are sure to be hundreds of thousands of hams who have lost all interest other than renewing their license against the day when they may regain it. I estimate as much as 40 to 50 percent of licensees are not active. They have no gear, no antennas, no current knowledge of what is happening with ham radio, just a license they renew when it comes due because they "might someday use it again". I know a bunch of people in that category. I think the 40 year thing is incorrect for that reason if no other. Virtually all hams I ever knew kept renewing the license as long as they could do so. And that doesn't address the many silent keys who are still in the active database for up to 10 years. I know of a number

of those, too.

So I'm convinced (no hard proof, of course) that the number of actual hams who are interested, active and involved and even basically informed, is far fewer than the license numbers would cause one to believe.

> be known. You need to know two outcomes to make a comparison, but we'll
> only know the outcome with restructuring.

One thing we can be sure of - the Internet and other current technology has siphoned off a good number of prospective hams. Cellphones with generous or no time limits have even killed off the "Honey bring home a gallon of milk and a loaf of bread" crowd as a source of nocode licensees. Many of them have abandoned ham radio as no longer useful in the cellphone age but remain active in the license database and thus count in the totals. No one knows how many.

The bottom line is as it has always been- only those who are intrigued by the 'magic' of radio and find a certain 'romance' in communicating over the airwaves will become hams, though many of the nocode techs seem to have missed out on that as a reason. Technology of today makes that attraction a faded phenomena for far more people than was once the case. Satellites, cellphones and the Internet. Just what is it about ham radio that you find so different and attractive? they ask.

You're certainly right- there's no way anyone can know the true numbers. Trends are another matter.

Dick

Any way you cut it there is no really good reason to join the ARRL. Perhaps
this is why 75% of licensed Hams steer clear of the ARRL. Ask yourself what
you gain versus what you spend.
The ARRL is to blame. They offer nothing save for a magazine and a logo.
Gee...why bother? Why waste the money?
I certainly do not need the ARRL....do you?

Nor does the FCC "mandate" any of the modes cited in the above, and the "logic" of testing for modes that the candidate may or may not elect to use IS comparable to the arguments being used by the NCTA (namely YOU, Lennie...) against Morse Code testing.

>Many radio amateurs considered the establishment of Citizens

I cannot fathom your obsession with imposing your meaningless drivvel into an Internet newsgroup for an avocation of which you have no vested interest and have expressed open contempt for, but you do it.

As for Morse Code being able to be done by "only a small percentage of humans", I dare you to produce the study that backs that up.

I canceled my membership after reading the Leagues proposal, and canceled my VE Certification when restructuring took effect. After a year went by I got re-accredited again and have been giving radio exams again. The local VE team said they were glad to have me back. But I won't join the ARRL again until they decide to wake up and do something to improve amateur radio. I know the ARRL won't work to improve things though because it would hurt the corporate back account. The ARRL won't be happy until there is a free ham license in every Cracker Jack box along with a flyer for ARRL memebership.

The FCC DID poll all radio amateurs - and all interested parties. The
NPRM comment process was/is open to all who wanted their voices heard.
No license required.
>
> The creation, changing or deletion of FCC regulations
> is NOT the sole province of already licensed amateur licensees.
> Never has been, never should be, never will be.

Agreed. But of those who comment to the FCC on amateur radio licensing
issues, the vast majority are "already licensed radio amateurs".
>
> That is no different than state laws on driver requirements.
> There would be nothing fair about a "licensed hams only"
> vote to determine amateur rules because it would ignore
> the rest of the public that has the same "right"
> to comment and be heard as someone already licensed.

Not only can individuals comment to the FCC, but groups and companies
can, and do. Like Kenwood and the ARRL.

The interesting thing is that when the results of the NPRM comments
were counted and categorized, a majority favored at least two code
test speeds.
IOW, the majority opinion among those who bothered to express one was
that
not only should code testing be retained, but it should be retained at
a
level greater than the absolute minimum 5 wpm test.

But FCC is under no obligation to follow the majority opinion.
>
> As an aside, even if your proposal was done, would you "allow"
> non-code tested hams to vote?

Sure - why not?
>
> What about Novice and code tested techs
> who only passed a 5wpm test?

Sure - why not?
>
> In 1999 when the issue was open for comment,
> No code tested hams plus those that only passed
> a 5 wpm test constituted over 50% of ALL hams.

Fine - but that doesn't mean they would agree with lowering the code test speeds, or complete elimination.

Does the fact that BSEEs and MSEEs exceed PH.DEEs mean they would support lowering the requirements for a Ph.D in EE? I don't think so.

Does the fact that the vast majority of drivers hold only "regular" drivers' licenses mean they would support reduction of requirements for a CDL or motorcycle license? I don't think so.

> If the question to be voted on was elimination of 13 and 20 wpm
> testing, then just what would you expect the outcome of the vote
> to have been with over 1/2 of all hams not having a license
> that called for 13 or 20 wpm?

Judging by the comments to the FCC, I think the majority would have voted to retain at least one of those speeds, if not both. Reduction to 5 wpm for all was a minority view among those who bothered to "vote" (comment) when it counted.

But again, FCC is not required to follow the majority opinion.

As for ARRL, which is by far the largest amateur radio organization in the world, full voting membership is available to all licensed radio amateurs - regardless of license class, number of years licensed, test location, test method, or code speed.

Today is election day - how many Americans will vote?

The ARRL has done many things over the last 40 years that I disagree with.
And they have done a lot that I do agree with. You can say the exact same
thing of a political party. Or the local Sheriff office.

All you folks that keep badmouthing the ARRL just remember one
thing......without the ARRL we would NOT EVEN HAVE Amateur Radio. Spend
some bux and read "200 meters and down" Get an education.

Totally agree. As a result of the FCC temporary authorization to allow un-attended digital on HF we all learned that packet was useless. This led to far more robust and usable modes that do indeed work at HF.

Packet is great for landline and/or direct noise free, path distrotion paths.

And BTW Larry Packet and CW are not in the same ballgame for emergency com. Packet is much more suited than CW would be for large text transfers, such as names of casualties...etc. CW would be usable for short messages over difficult paths.

Even at V/Uhf on Packet you can have a outstanding signal and have sufficient distortion of the waveform to make for retry city. If you ever operated it extensively you would know that.

I think your thinking of the device known as a 'rotary spark gap'. I remember visiting that site and the sound was like a musical note. Quite distinctive from the roar of King Spark on the bands (DC to Daylight).

Back in the old days it was a good thing, but starting with the incentive liscensing, the ARRL has done more to screw up ham radio than help it. The CW requirement turned off a ton of people, including myself. I did pass the 5WPM almost 30 years ago, but working CW was/is something I never wanted to do. I tried several times to get to 13WPM, but I get to about 8WPM, and I couldn't take it anymore, it annoys the crap out of me, regardless of what pitch I listen to it at. I never understood the CW fanatics anyway, I had no objections to making the written test harder, but they didn't seem to understand what a turn off it is to some people, and they managed to keep the higher speed requirement until it's probably too late to generate any real increase in new hams. The internet is a much bigger draw to most kids than radio..

Now that I can upgrade without any more code, I have lost most of the desire to do so. I haven't even keyed up an HT in about a year or so...

Some people promised that before the Tech lost its code test and
before the 2000 restructuring. Didn't happen. And probably won't
happen next year when, in all probability, all code testing for a US
ham license disappears.

Not all predictions come true, and not all promises are kept.
>
> Note that if the average ham keeps his license for 40 years before tiring

> hams from shrinking.

Agreed - works out to an annual dropout rate of 2.5%. But not all
years, or months, are created equal. Some months have more VE sessions
than others, for example. The vanity call rules changed in 1994,
resulting in a large number of renewals (vanity call results in a
renewal so FCC doesn't have to prorate the fee). Etc.

> In the period since restructuring the ARS has been
> attracting new hams at slightly higher than this rate. Almost 50,000 of

> gained.

Lessee, about 30 months since restructuring, about 1500 per month,
45,000. Close enough.

> Unfortunately the more interesting question, which is what the 50,000 number
> would have been had the high-speed code tests not been removed, is impossible
> to answer with certainty.

13 and 20 wpm are certainly not "high speed".

Also note that the restructuring dramatically reduced the written
testing as well. Fewer written tests (3 vs. 5) and fewer total
questions.

>One can only speculate.

Then let's do a little speculating. Prior to the restructuring, the
number of US hams was fluctuating around 675,000. Now it's fluctuating
around 683,000. Total variation is only a percent or so.

Check out

http://www.ah0a.org

and note how the number has wandered around since 1997. Note that in
the two years or so before restructuring, the numbers grew from around
672,000 to 676,000. Also note how the numbers topped out in March of
2001 at around 684,000, then started to slide.

Also check out the implosion of Japanese amateur radio, particularly
the number of stations.

And that outcome is overlaid with a bunch of other effects, like
sunspots, economic conditions, CC&Rs, terrorism, war, other
communications options, etc.

--

But what really matters is not the total number of hams but rather the total number of active hams.

Yes, I have a hard time connecting to and checking traffic on the
local (2-m) ARES/RACES packet BBS because of all the other
ARES/RACES members/stations sending ID/beacon UIs. I wish that they
would stop so that my ID/beacon UI comes through.....

And if HF packet is useless, why not use PACTOR or AMTOR/SITOR like
the big ships do?

>
>I think Dick and Jim have already told how inventive licensing was
>foisted upon the amateur radio service by hams inside the FCC. I
>think they've done enough damage to the ARS for one century.

Their arguments seem founded on their own personal
preferences and they try to bolster those arguments based
on "tenure" in amateur radio and the usual human territorial
imperative (turf) feelings. They all "bought into" the older
standards and practices and, possibly, because of that they
insist that all others who come later do as they did. About
their strongest public reason for maintenance of the old is that
it is "tradition" and some vague mentions of "service."

[the word "service" in Title 47 CFR denotes a type and kind
of radio activity...it is a regulatory term, not a per se or de
facto term equivalent to "public service"]

The FCC must regulate ALL of the US civil radio spectrum, not
just amateur radio, and many allocated amateur bands are
already shared with other civil and government radio services.
The FCC is not obliged, by law or any virtual moral purpose to
listen solely to radio service users in regards to regulations for
that particular radio service.

A problem in an open-access, unmoderated newsgroup is that
many with long tenure as licensees have the "turf" view of
virtual "ownership" over who can say what. That is their
personal viewpoint and results in the heckling and personal
attacks seen in here. None of them "own" amateur radio or any
other radio service yet they feel compelled to boss others not
agreeing with them.

Amateur radio in the USA is, slowly, losing the PCTAs. Times
have changed but these old-timers (chronological or mental) do
not like change. Conditions in their hobby must remain the same
for them to feel secure, comfortable. Change is uncomfortable and

threatens their security. The end result is the kind of heckling and personal attacks aimed at those who threaten their self-defined superiority in an avocational activity.

"Alexanderson" is the name, at one time the virtual king of old
high-power radio. Those were AC generators capable, at best, of
reaching frequencies just beyond VLF.

The Swedish Televerket Museum does a one-hour, one-day-a-
year commemorative transmission on VLF. They have a web site
for those interested in very old-time radio.

There are plenty of web sites of historical interest in old radio other
than the ARRL. Try searching for "Thomas H. White" to find a
great deal of historical information on old radio days from a larger
radio world perspective.

>Oops!

Well, there you have it, Bert.

FCC has made it easy for interested parties to submit comments on NPRMs. One
can send in paper copies, electronic files, or use their website for either
directly-entered brief comments or attached files.

FCC set up a longer-than-usual comment period for the restructuring petition.
Most of the then-regulars of rrap commented. Some did reply comments. All but
one that I know of got their comments in before the deadline.

>Keep 5-wpm and 13-wpm, drop 20-wpm.

That was the ARRL proposal.

5 wpm for General, 12/13 wpm for Advanced, 20 wpm for Extra. Lots of other
variations. FCC said 5 wpm for all.

True, but that is a bit different than a "direct" polling of amateurs
(or others) which Bert would like to see happen.

> > The creation, changing or deletion of FCC regulations
> > is NOT the sole province of already licensed amateur licensees.
> > Never has been, never should be, never will be.

True...but even as such, it is not a "vote" to determine
overall preferences. The FCC weighs the rational
of the comments...both pro and con.

> > That is no different than state laws on driver requirements.
> > There would be nothing fair about a "licensed hams only"

Correct.

> The interesting thing is that when the results of the NPRM comments
> were counted and categorized, a majority favored at least two code
> test speeds.

That's because the ARRL position as originlly positioned
was the "compromise". It was several weeks after the opening
of the NPRM before NCI had a stated position that called
for only one test.

So do I, but often their inactivity is not due to lack of interest. Usually
it's lack
of time/money/space/energy.

>I think the 40 year thing is incorrect
>for that reason if no other. Virtually all hams I ever knew kept renewing the
>license as long as they could do so.

I think the 40 year thing is about right for the "average" length of licensure.
But
that doesn't mean a ham is active for all 40 years.

>And that doesn't address the many silent
>keys who are still in the active database for up to 10 years. I know of a
>number of those, too.

Same here, too. FCC will cancel an SK's license, but they need reliable
paperwork.
(I suspect most of the licenses canceled by the FCC are SKs).

The vanity callsign program has actually helped in this regard because if
someone

wants an SK's call, FCC first has to cancel the old license.
>
> So I'm convinced (no hard proof, of course) that the number of actual hams

>missed out on that
>as a reason. Technology of today makes that attraction a faded phenomena for
>far more people than was once the case. Satellites, cellphones and the
Internet.
>Just what is it about ham radio that you find so different and attractive?
they
>ask.

If they have to ask, no answer is adequate.

I saw an interesting article about this a few years back. Basically, the reasons
people become hams are three:

1) They want to communicate
2) They want to mess around with radio technology
3) They want to operate 2 way radio stations

Most hams have a mixture of these three reasons, in varying amounts. The honeydew folks are almost pure Reason 1, and have all but disappeared in areas with good cheap cellphone coverage. Cheap manufactured gear has put a big dent in Reason 2, as well.

> You're certainly right- there's no way anyone can know the true numbers.
>Trends are another matter.

What's impossible to gauge is all of the various overlapping influences. For example,
ham radio has historically grown well in bad economic times and not done so well
during boomtimes - note how the stagnation of the '60s turned into the growth of the
'70s and early '80s. And the fastest growth in the history of US ham radio happened
during the Great Depression, despite the fact that the regs had gotten much tougher
in 1929.

I wonder if that's anything like claiming that a cw rig could be
cobbled together at any time, from just about anything, and used to
communicate successfully, and believes it so much so that he wants
everyone else to learn cw and believe like he believes?

But then misses an invitation to have a cw qso with Hans because he
wasn't where his store bought radio was.

That kind of lost interest?

No. The ARRL needs me. They need MEMBERS to dissent, not
disinterested amateurs who have no vision of the future of amateur
radio.

So you didn't take advantage of lowered standards?

How did you do it then?

How is it possible for the VE's to administer an exam from an expired question pool?

Say what you want, I had permission. Do you still think a military commander cannot grant permission to operate in Somalia? You are neither a government official of Somalia, a military commander, nor a compliance agent of the FCC.

But you do make a lot of noise like a banty rooster.

It seemed like the code tapes were at exactly the right pitch to drive me
up the wall almost instantly. If I can drop it down to about 150hz or
so, it's ok for a few minutes, but at 800, it's like nails on a
chalkboard!! It's funny, but the nails on a chalkboard never bothered me
until I hit 40, now it kills me..

They're still trying to conscript pers into the Morse Service.

Meanwhile, I think chopstick use is a much more important skill than morse. I can think of needing to eat and stay alive in situations where I won't have a fork handy, but not of a severe enough nature to require a radio to order from the Oily Wok. And I'll have my chopsticks at the ready when the ChiComs overrun our position, waiting for Hopsing to serve me a steaming plate of rice, kimchi, and a couple of yaki mandu and fish eye kim bop.

How odd that you say that. I read Han's invitation to join him in a CW contest.

Because (a) it's fun,
(b) we hold Federal licenses that permit such operation, and
(c) some of us still regard radio communication as bloody
magic, including some of us who have advanced degrees in
electronics.

This is not a POLICY issue.

Try to put postings in the appropriate forum so the forum serves its purpose and doesn't become an "every topic" forum.

This "Homebrewer's parts sources" should go to rec.radio.amateur.homebrew.

If any of that was anything more than the speculation of a strange mind, it still wouldn't be anything nearly as lame as your case, sitting on your lazy ass whining about the test requirements for decades just because you thought it over and decided that some part of the testing didn't meet your personal definition of appropriate.

Your reading comprehension is no better than your mental cognization. He noted AFTER the contest that he had worked a few rrap
CW ops. Maybe your kids ARE doing your reading for you. I didn't get on at all simply because I wasn't home and decided it
wouldn't be proper etiquette to drill holes in the brick home of my host so as to run antenna cables outside. So I left my
portable rig at home. Got a problem with that? You would.

As it happens, I don't care that much for contests, though I will sometimes work them for a while just to give out contacts to
those who do it seriously for score. I much prefer snooping for the weak signals of DX stations below the band clutter or just
plain relaxing ragchewing. Got a problem with that? You would.

Well.... There is an wireless internet provider in the Mt. Pleasant, MI area that has an effective coverage range of 20-30 miles right now as we speak! Taking that similar technology and applying it towards ham usage would be great. Blows the doors right off of 300-1200 baud rates. In regards to just passing messages the current packet structure works fine, but for any of the other "enjoyment" factors of utilizing wireless digital comm's the speed is just not there. There are technologies currently allowing speeds that make packet look like a stone-age item.

I am considering moving to a township that is within that coverage area described above, merely to get faster connection speeds that 28.8k (with a 56k modem) due to the cruddy phone lines in this area. Currently in my rural area DSL and Cablemodems are STILL not available!!! :((Gotta love Charter Communications and Ameritech!)

news:<aq6su7$3c4$1@slb2.atl.mindspring.net>...
> I worked lots of kids with those Heath lunchbox.

In my case I wuz not a kid when I fired up my 2m Lunchbox. I wuz most
of the way thru eng school and well into my second hunnert dxcc
countries. Wherin lies my primary interest in 2m comms. Then and still
is. There's a reason for that.

> I got me a Heath sixer
> here and it still works fine.

Izzit a yellow version with Civil Defense decals?

> Remember how you would call CQ for ten or more minutes then announce what
> part of two meters you were listening to for a call?

Never called a CQ above 30Mhz in me life and never tuned for a qso
either. That might change.

> Those old rushboxes
> made tuning e a s y hi.

Superhissorodynes? Something like that wasn't it?

> Unless you had two or more stations on the same
> band that is... hi.

That's absolute fact, which is howcum doing any "tuning around" din
matter, ya got the whole band like it or not. Not that it mattered, as
you point out 2m was not exactly flooded with signals.

Verbosity on my part beckons. Again.

Obviously we all come from different directions in ham radio,
different hot buttons, different "visions", different incentives for
getting into the hobby in the first place, etc. I have mine. At least
part of which involves this thread.

I built my first of several HF rcvrs as a member of the single-digit
age set 1946-47 and got eaten up by swl dxing. I eventually took my
hobby to the next level and got into ham radio in 1953 or so as a
Novice when I wuz in high school so that I could go dxing both ways.
My first q as a General was with g5zk on 3.505 the day my license
arrived and it's only gotten better since then. Close to six decades
later HF dxing is 95% of the reason I'm still in the hobby.

Wherin lies the only reason I bothered with the Lunchbox. Once I got into ham radio and it became known that I was into dxing I became involved with the far more experienced "neighborhood" dxers. Most of those not very surprisingly were/are members of the Frankford Radio Club which is one of the Big Three dxers & dx contest clubs in the U.S. and which is based here in Philly as it has been since 1927.

As is still the case they were into recruiting and twisting young clueless dx chasing munchkins like myself into becoming hardcore FRC dx contest point generators and I got ate up at that level too. Ya join, there are "expectations". Peer presure is hell when yer 16. Insidious old farts they wuz but in retrospect I got no bitches. Part of their whole scene was their vhf comms.

The "dx spots networks" were not magically hatched come 2m packet in the early '80s, far from it. Spots networks had been fully implemented four decades earlier when these guys were sharing real-time spots on their 5m AM freq in the late '30s. After The War it moved to 6m AM. By the time I got into it in the 1958-60 timeframe the network was in the process of moving to 2m thus cometh my Lunchbox. With all due respect I barely considered 2m ops as real ham radio. The Luncbox was nothing more to me than a regional intercom, a station peripheral which was my "spots net I/O device". I got it running on the freq and from there the only controls I used were the power switch and the tx/rx switch. Which is not to say that we didn't have a lot of fun yakking at each other on the freq between contests of course. But come a contest however and iron-fisted no-BSing discipline ruled. I'm still known for very terse vhf phone ops.

The club net went from there to FM simplex a few years later, then to the club machine which still booms the region, then to packet. Interesting thrashes all the way and I'm glad I was there to be part of it. Today there are no spots on phone, they're in the cluster so ya can yak yer brains out on the machine and nobody tells ya "Shaddup dummy, there's a contest underway!".

The usual progression scenario from '30s 5m AM to New Millenium 2m packet for the spots comms.

Heh.

Oh, I had an interest. So much so that I petitioned my government to
remove outdated, irrelevant, and superfluous testing requirements from
the amateur radio service.

Sometimes going against the flow takes guts and a lot more work.
Other people just go with the flow, and ask "How high?"

Meanwhile you missed an opportunity to show the world that you
actually practice what you preach. Or do you just preach?

>> never see that many ACTIVE licensees. I bet that dropping the code
>tomorrow
>> would see us get to 750K and top out there.

Probably not even that much. Note the growth before and after the 1991 and 2001
changes, and you'll see that after the initial surge the growth settles down
to not much more than the old rate.

It's kind of like selling VCRs. At first, VCRs were expensive, and few people
had them. Every time the price dropped, sales jumped. For me, $300 was the
"buy" level. Now you can get one for a third of that.

But somewhere along the way, the market saturated, meaning that almost everyone
who wants a VCR has one. VCR sales are now driven by replacement of old ones,
upgrading to a fancier model, and population increases. For most folks,
dropping the price will not cause them to run out and buy a VCR.

> Probably correct, Steve. Let's face it, there will probably never be a
>large segment of the population who ever even think about becoming hams.
>It just isn't that sort of hobby. Not that that is a bad thing.
>
> At this point, it might be interesting if Jim could get us some idea of

>number of Hams as a percentage of total population. Care to chime in, Jim?

Here ya go. All numbers are approximate:

1930: US population 122 million, US hams 18,000, 1 ham per 6778 Americans

1940: US population 131 million, US hams 50,000, 1 ham per 2620 Americans

1950: US population 150 million, US hams 90,000, 1 ham per 1667 Americans

1960: US population 179 million, US hams 230,000, 1 ham per 779 Americans

1970: US population 223 million, US hams 270,000, 1 ham per 825 Americans

1980: US population 227 million, US hams 350,000, 1 ham per 649 Americans

1990: US population 249 million US hams 550,000, 1 ham per 453 Americans

2000: US population 281 million, US hams 683,000, 1 ham per 411 Americans

Even using these approximate numbers, it's clear that the trend has been steadily upwards in terms of population, with the exception of the 1960s, when the US population boomed but the US ham population virtually stagnated. Most of the reasons for that low growth had little to do with ham radio itself (Vietnam, civil rights, baby boom, women's lib, etc).

Any excuse is a good one right? All you have to do is reduce the frequency
of the tone. The testing teams are required to accomidate you.

RRAP is not the only dot policy NG, there are a jillion of 'em and
they're all notorious and they all have a several characteristics in
common: (a) There are always at least a few far-end senior gurus in
the field. (b) They all draw an inordinate number of cranks per
capita. (c) There are always a few utterly clueless nitwits looking
for a life. (d) there are always lurkers who read but never log on.
(e) Most of the bandwith is sucked up by keyboard fist fights.

> Either way, newsgroups are more of an
> entertainment source for me, as I can peruse them while at work, and once in
> a while, I might find something worthwhile to learn too!

One of the founding principles of the Internet is to be an asset to
education. The opportunity to learn is why I spend a lot of time
surfing the technical newsgroups like dot antennas and others outside
ham radio, in my profession, etc. Those are real resources. RRAP is
not.

> (Never take sh*t
> on here toooooo serious, it is not worth it.)

There isn't a dot policy NG anywhere which can possibly be taken
seriously.

I took the 5WPM almost 30 years ago, I'm done with CW, period. I wanted to get the general just to shoot the breeze with my friend down south a couple of times a week. I still might get it, the written is a nonsense test anyway. Some of the questions are insane. As far as any excuse being a good one, as far as CW is concerned, yeah. I resented having it shoved down my throat, kind of like having a religion shoved down my throat when I dont want it. For some hams, CW is a religion. Why, I don't have a clue. I was heavy into RTTY decoding for a while, and I didn't think learning all about it should have been manditory, like the CW fanatics do with it.

I've never seen/heard a test where they could do anything to change the pitch anyway, it seems like it's 800-1K and that's it. It's on a PC, or it's on tape. Not to mention the goofy spacing they used when a friend of mine took the thing about 10 years ago. It was kind of funny, it was like someone just randomly keying dots and dashes. The look on the guys faces that were taking the test was great. Nobody passed, but they went and got another tape and all but two passed on that one. My friend was one of the two, he was rattled by the first tape, and couldn't get calmed down enough to pass. What a waste of 5 hours of standing around!

Where is there a "good ham" requirement to demonstrate
high-speed/high-rate morsemanship in amateur radio?

Is "good amateur practice" supposed to be a living museum
for morse code skill?

> One thing we can be sure of - the Internet and other current technology has

The Census Bureau knows, several communications industry
groups know the quantity of cellular telephones...approximately
one in every three US citizens is a cellphone subscriber. That is
roughly 100 million cell phones in the USA.

To miss the average citizens' use of cellphones in public areas
is akin to being both blind and deaf. US and world cellular
telephone subscriber growth has been going on for a decade.

> The bottom line is as it has always been- only those who are intrigued by
>the
>'magic' of radio and find a certain 'romance' in communicating over the
>airwaves
>will become hams, though many of the nocode techs seem to have missed out on

>far
>more people than was once the case. Satellites, cellphones and the Internet.
>Just
>what is it about ham radio that you find so different and attractive? they
>ask.

Why do you ask about asking? :-)

Other radio services' radio use has been increasing steadily
since the end of WW2. We've had communications satellites
for two decades to give us quick, reliable international
communications. We've had available direct-dial long-distance
telephony for longer, now abetted by fiber optic cables carrying
tens of thousands of simultaneous telephone conversations.
A quarter of a century ago, humans on earth talked to humans
on the moon. Television is going digital and promises a clearer
picture than possible with old analog modulation methods. The
shortwave broadcast stations already have a digital standard
that has been proven on a three-year on-air testing program.
Government and military users of HF already have an Automatic
Link Establishment standard and are beginning to use it. VHF
and UHF vehicular/portable equipment has become ubiquitous
in business and utility and public safety communications during
the last three decades. GMDSS, instituted by the maritime
world, has replaced the old bottom-of-MF distress calling.

Some old-timers are stuck in standards and practices of their
long-ago youth, touting morse code skills as the ultimate in
amateur radio...and are vainly trying to interest younger people
into their retrograde interests. :-)

Why is there such a "need" to relive the 1930s and 1940s?

Normally I wouldn't respond to such an obvious troll, BUT...

Let's look at the history:

Incentive Licensing came about during the '60s - JFK/LBJ/Great Society era.

Medical waivers: 1990, by direct "request" of Papa Bush in the Oval Office.

First US nocodetest ham license: 1991 - Papa Bush still in charge, and highly popular.

2000 restructuring: Tail end of Clinton era.

2003 projected end of S25.5: Dubya in the White House, GOP in both houses of Congress.

The pattern should be obvious.

Look who is in charge of the FCC, btw.

Whine whine whine....all we hear is whine whine whine. You people have it made. All you have to do is memorize 25 letters of Morse Code. Wait around till your good buddy at the club decides its time to give a test. And you go down to your local club and take it.

How would you like to have to save money for a YEAR. Get a train ticket and travel 110 miles to a strange city. Spend the evening and get up at 5 am to get to the Federal Building downtown Pittsburgh PA. Wait in line while they process 300 applications. Sit in a room so large you can almost see the other end of it from the rear. Take the CW test as it is echoing all over the room. Oh BTW I was 13 at the time and my mother had to come with me because I was too young to ride the train alone. One more thing...that was the General at 13 wpm. HARD COPY for one solid minute out of 5minutes. Then you had to send by using a STRAIGHT KEY at 13 wpm.

I don't want to hear it.

>True, but that is a bit different than a "direct" polling of amateurs
>(or others) which Bert would like to see happen.

I'm sure most of us would like to see such a poll conducted, but it's just not
gonna happen unless somebody ponies up the bucks. 684,000 hams at how much per
ham to create a questionaire, mail it out, and process the replies?
Fugetaboudit.

FCC's comment process allows any and all to have their say. The really sad
thing is that despite the ease with which comments can be filed, there was such
a small response.
>
>> > The creation, changing or deletion of FCC regulations

APRS is in "constant experimental mode" <BIG GRIN> re: your comment about broadcasting where you are all the time.

APRS proves itself valuable in situations such as S&R, lost you-name-it, and of course, storm chasing/spotting.

Does any one know for a fact (rather than just having an opinion, I've got plenty of those myself :-)) whether a GMRS license allows you to talk to any other GMRS licensee, or just people operating under your license?

I've gotten into an argument over it, and part 95 is not being helpful, honestly. Reading 95.1a, 95.3, 95.21, and 95.181, all seem to pretty clearly state that a license allows the licensees, and designated people inside the family (I'm talking the current individual licenses of course, not a legacy business license) to operate a given gmrs "system", i.e. a set of units, and to communicate. It seems to only allow you to operate within that "system". Unless you're having a 95.181(d) emergency. The one place that opens it up is 95.101(a), which does state that a "GMRS license authorizes a GMRS station to transmit to other GMRS stations at any geographical location within [us control]" But, even then, elsewhere stations have been defined as being units with an system.

Basically what we're trying to decide is whether it's legal for a pair of fully licensed families with GMRS units to talk to between the families on a joint outing, say, if we went to, oh, Disneyworld or anyplace where operating at GMRS power rather than FRS levels might be necessary due to distance or terrain. We could clearly do that legally under FRS laws, but, then, we'd be at FRS power levels.

The answer is yes. The license gives you the authority to transmit. Anyone
can receive. The only restriction is that you don't talk to
furiners(foreigners)

Let's look at your statements and at the Regs.

>
> I've gotten into an argument over it, and part 95 is not being helpful,
> honestly. Reading 95.1a, 95.3, 95.21, and 95.181, all seem to pretty

> allow you to operate within that "system".

Sec. 95.1 The General Mobile Radio Service (GMRS).

(a) The GMRS is a land mobile radio service
available to persons for short-distance two-way
communications to facilitate the activities of
licensees and their immediate family members.
Each licensee manages a system consisting of one
or more stations.

So a system is defined as one or more stations.

Sec. 95.23 Mobile station description.

(a) A mobile station is one or more units
which transmit while moving or during temporary
stops at unspecified points.

So a station is one or more units. I guess the issue is back in 95.1; I
read this as saying that GMRS is used to facilitate the activities of
licensees. Oh, and since family members are permitted to be station
operators, we can facilitate their activities as well. (95.179(a))

But let's look here, too:

Sec. 95.101 What the license authorizes.

(a) A GMRS license authorizes a GMRS station
to transmit messages to other GMRS stations at any
geographical location within or over the territorial
limits of any area where radio services are regulated

by the FCC. These points are listed in Appendix A.

So a licensee can transmit to other GMRS stations. A station is one or more units -- no restriction to family members; see 95.23 excerpt above.

> Unless you're having a
> 95.181(d) emergency. The one place that opens it up is 95.101(a), which
> does state that a "GMRS license authorizes a GMRS station to transmit to
> other GMRS stations at any geographical location within [us control]"
> But, even then, elsewhere stations have been defined as being units
> with an system.

Read that again -- tell me why you think it's limited to _family_members_. 95.101 doesn't use unit or system. A licensee manages a system consisting of one or more stations; a system is one or more transmitting units used by station operators; a station is one or more units which transmit; a station may transmit messages to other stations.

>
> Basically what we're trying to decide is whether it's legal for a pair

> under FRS laws, but, then, we'd be at FRS power levels.

Where in the regs do you find the prohibition. It does _not_ say that licensees may communicate only to their immediate family members. You say, 'It seems to only allow you to operate within that "system".' I don't see that anywhere in the regs.

Len, I've said that the actuarial tables will eventually take care of
"old-fartism." I'm not immune to the actuarial tables either, so
don't you sensitive types go calling me names again. Meanwhile, I
don't mind change. I've lived with it all my life. Some of it is
even fun.

Yes, you can talk to any licensed GMRS operator. You can also talk to
any FRS radio user on the interstitial frequencies (FRS channels 1 -
7.) The FRS user does not need a license to talk to you but you must
ID as required.

GMRS base stations can also talk to each other. This was not allowed
in earlier rules but that prohibition has been eliminated.

Mike

Following courtesy of N0AX, from the CQ-Contest reflector.

Some of you have expressed an interest in increasing your CW speed, and
this is the weekend to do it. The annual ARRL CW Sweepstakes runs from
2100Z on Saturday to 0300Z Monday (Sunday evening) on 80 through 10
meters (not on 30, 17, or 12-meters). While you might recoil in horror
at the high code speeds, tune wayyyyyyy up in the bands and there will
be some folks going nice and slow. The Novice bands on 80, 40, 15, and
10 meters often have a number of slow-speed stations hanging out up
there. Don't be afraid to jump in there and give 'em a call. I
guarantee your code speed will double with just a few hours at the
key.

Here's how it works...

1) You hear somebody calling "CQ SS CQ SS de N0AX"
2) Send your call ONCE - "W7VMI" - don't send their call and don't send
yours twice or three times. If they don't copy your call on the first
try, they'll send "AGN" or "?" or just CQ again. So call 'em again. If
they're going too fast, send "QRS" and they'll slow down.
3) If they hear you, they'll send something like this - "W7VMI 107 A
N0AX 53 CO" What the heck does that mean?
- W7VMI is your call to let you know they're talking to you
- 107 is the number of the contact in the contest for them (their
next contact will be 108, etc.)
- A is their entry class (low power) - there are A, B, M, Q, S, and
U classes
- Then they send their call
- 53 is the last two digits of the first year they were licensed -
it's called a "check"
- CO means Colorado, their ARRL Section (there are 80 - some are
states, others aren't, all are two or three letters)
4) If you don't get it all, it's perfectly OK to send "QRS PSE, AGN" -
which means "Slow down, send it again, please"
5) If you do get it - way to go! Here's what you send...
- Their call
- The number this contact is in the contest for you - if it's your
first send "1" and pat yourself on the back
- Your class (QRP is Q, <150W is A, >150W is B, M is

multioperator,
S is a school club, and U is unlimited...don't ask)
- Your call
- The last two digits of the first year you were licensed - if you
got your license last year, it's "01", for example
- Your section, "WWA" for Western Washington, maybe, or "IL" for
Illinois, or "PQ" for Province Quebec - ah, but oui!
6) If they don't get it, they may say...with a question mark, maybe...
- "AGN" - send everything all over again
- "NR" - repeat just the number a couple of times
- "PREC" or just "PR" - repeat your class letter, it's called
"precedence" for a number of reasons you don't care about
- "CALL" - repeat your call (this is rare)
- "CK" - repeat the two digits of the year, your check
- "SEC" or "QTH" - repeat your section
7) They may ask YOU to QRS, you speed demon, so do it with a smile!
8) If they copy everything, they'll say a short "TU" (for thanks) or
"R"
(for Roger) or "QSL" (for received OK) and then just send their CQ or
maybe just their call and away you both may go.
9) Sometimes, it just doesn't work out - QRM (interference) or QRN
(static) or QSB (fading) or the cat could cough up a hairball on the
rug
requiring immediate action. Don't take it personally, just go find
somebody else to call. It's a no-fault deal.
10) If you get tired of "Searching and Pouncing", then tighten your
belt, mop your brow, cock your hat at a jaunty angle and call CQ!
It's
easy - don't have a cow, man, just call "CQ SS CQ SS de W7VMI W7VMI"
and
listen, repeat if necessary. Soon you'll get an answer. Just play
back
the above steps with you as the call-ee.

What's the object? Make as many contacts as you can. Try to contact
as
many different sections as you can. Try to spell your name from the
last letters of the calls you work. Work your home state. Work your
brother's state. Nobody can stop at just one QSO...

It's a lot of fun - the hours will fly by. Keep a simple paper log
the
first time out to make it easy - you can worry about entering it on a
computer later. There are complete rules and instructions for
operating
and scoring and sending in the log on the ARRL Web site
http://www.arrl.org/contests/rules/2002/nov-sweeps-rules.html. Come
spring of 2003, you can click on over to the contest results and
wonder-of-wonders, there your call will be with the mighty titans in
the
very same font size just a few lines away. Woo-hoo!!

Go for it!

Dan, air-photo and satellite interp, and digital image processing in
no way reminds me of beeping french fryers at McDonalds. How odd to
think it would.

But if theat's what you think is important for amateur radio, you just
keep thinking that.

Pure whinning, huh?

You're the one who whon big-time.

In your beyond ignorant postings you try and try, in a Dukes of Hazard
sort of way, to sound knowledgeable about the amateur radio service,
constantly claiming "dumming down" of the ARS. But anyone who reads
you stuff knows you couldn't possibly even read the questions on an
exam let alone answer them correctly.

Then $omehow you pull off EXTRA-LITE and make fun of others who do the
same.

You got a wind fall off the labor of others.

Geez, not only would it appear that you've lost in the elections, but
you've lost in the ARS as well. Or did your dog die?

Maybe he and his band can record a song and video featuring ham radio?
Except the FCC says no music over ham radio.....

You got the right answer but with the wrong reasoning.

Except for emergency situations and certain paging operations,
one-way communications are not permitted in GMRS.

HOWEVER, the rules have always been interpreted to permit
intercommunication between stations, not restricted to those
stations within a single system, if the message content is
related to the personal business of the licensee(s).

The rule wording is a bit confusing for someone who isn't all
that familiar with how FCC rules are interpreted, but that's
the kind of stuff that I do for a living....piece of cake.

Good point, Bill. However, in the case of the Morse Code, that particular licensing requirement have/had a justification which is/was very beneficial to the ARS.

Hans,

Would it help if I said member, NCI after my name? Hmmmm .... I'd best do a reality check here ... did I mention CW? Ummm ...

On the quote you supplied - believe it or not, I actually agree about two license classes. All of the classes have caused a problem. When I was first licensed, I was a novice. The general class had full access to HF. The tech license was a slippery slope for someone who failed 13 words per minute. You could get that license, but were often stuck with it for life since you would have a problem upgrading from 5 to 13 words per minute. I've actually considered getting my old callsign (WB2OSP) back; but why pay money for it? I'd love to see all callsigns a 2 X 3 (except, perhaps, for special event stations and leave W1AW alone). When I mention the something for nothing, I refer to folks trying to infer that the tests are real difficult (yep, multiple guess with only 4 choices - again a disclaimer - I'm not discussing CW). Of course, with what is sometimes occuring on 14.313 and 75 meters, perhaps we only need one test - a sanity test. ;)

Didn't mean to raise your blood pressure ...

Thanks. Gee, we'd just happened to say to each other "You know, probably the only one who could tell us for sure would be a lawyer" :-).

Although that brings up a parallel concept. If a bunch of us, each with our own individual licenses (or at least one per family) all volunteer at something (parade, sci fi con, something like that), where we're not employees, is it a legitimate non-business use to talk to each other about what we're doing?

I guess what was confusing was that licensees managed systems of stations,
and under the section on what the license allowed it talked about supporting
the personal or business activities of the licensee and the people using
the license, and elsewhere it specifically listed only family members as people
who would use your license. (95.181 and 95.179). So from that it was starting to
sound like you could only talk to people operating under the same license, and
only family members were allowed to share a license. Of course, 95.33(a)1-4
had to go confuse things by talking about how it was acceptable to share stations,
but didn't say a thing about licenses.

I do get a good chuckle over the FCC site regularly referring to part 95 as having
been "clearly written so as to be easy to understand."

I don't think he gets that, Bill. He didn't get the fact that things like
medical waivers and the Tech losing its code test came about under Papa Bush,
while Incentive Licensing happened during the JFK/LBJ Camelot/Great Society
years. And the highly probable end of all code testing next year (assuming
S25.5 goes away) will be under an even more Republican administration.

See the pattern?

Of course the 2000 restructuring was at the tail end of the Clinton
administration.

So now, just where did you ever get the idea that *I* wanted to increase *my* code speed?

Start paying attention. I know that's a tough assignment after all these years of your childlike whiny I-gotta-have-it-my-way
protesting (you DO remind me of my 5 year old grandson except he's also smart as well as still a child).

Don't forget to add in the numbers provided by AC6V:

1917 --- about 6,000
1928 -- about 17,000

>A person would have to put a good spin oon
>this to claim that the ARS is dying.

Dan, W4NTI, says it better than I can. Here are his words:

"We don't need millions of hams. We need about 500000 of on the air
operators. That will stop all the crabbing about 'numbers'. If 1/10 th of
the presently licensed operators would fire up on one weekend a year it
would make the CQ World Wide Phone contest sound like a low QRM event."

Well said!

What really matters is how many ACTIVE hams there are, and what form their
on-air activity takes. Posting on newsgroups doesn't count.

You heard what CW SS is like. That was the result of perhaps a few thousand stations. Anyone who labels CW as "obsolete skill" just isn't in touch with reality on the HF ham bands, as this past weekend proves. That doesn't mean there MUST be a test for the skill, but it does mean the skill is not "obsolete".

And SS is just an NA contest that lasts 30 hours, with 6 hours off required. CQ WW and ARRL DX tests - those are the biggies. Whole world pounding in for two solid days.

Actually, the actuarial tables simply remove one group of what you call
"old farts" and substitutes another. Thus has it always been; thus it
shall always be. Len is, after all, a member of the worst sect of "old
farts"--the kind who is miffed because he can't do what the other "old
farts" are doing. In his case, that would be amateur radio.

> I'm not immune to the actuarial tables either, so

Ron Jarrell <jarrell@babylon5.cc.vt.edu> writes:

As a prequel to my comments here, see my other posts concerning Phil Kane's comments.

> I guess what was confusing was that licensees managed systems of
> stations, and under the section on what the license allowed it talked
> about supporting the personal or business activities of the licensee and
> the people using the license, and elsewhere it specifically listed only
> family members as people who would use your license. (95.181 and 95.179).

179 says, in part:
Sec. 95.179 Individuals who may be station operators.

(a) An individual GMRS system licensee may permit
immediate family members to be station operators in
his or her GMRS system. Immediate family members are
the: [list of members omitted]

This is a list of people who may be station operators: the licensee and his
or her immediate family members.

181 says, again in part:
Sec. 95.181 Permissible communications.

(a) A station operator for an individual who is
licensed in the GMRS (other than an employee of that
individual) may communicate two-way voice messages
concerning the licensee's personal or business activities
(see Sec. 95.179).

I see a limitation on _what_ may be transmitted, but not to _whom_ it may
be transmitted. The other sections state that transmissions may be to
"other GMRS stations at any geographical location ... ." (Section 95.101)
Again, there is no restriction on transmissions to family members.

> So from that it was starting to sound like you could only talk to people
> operating under the same license, and only family members were allowed to
> share a license.

I don't see that myself, but I know reasonable people often disagree.

> Of course, 95.33(a)1-4 had to go confuse things by
> talking about how it was acceptable to share stations, but didn't say a
> thing about licenses.

I _think_ this is supposd to keep repeaters from being commercial.

>
> I do get a good chuckle over the FCC site regularly referring to part 95
> as having been "clearly written so as to be easy to understand."

One of the problems with all regulations is that you have to know what the intent was before you can understand what the regs are saying. 95.33 is a good example. Repeaters are never mentioned in the section; is that what they're talking about? Who can tell?

To add to the confusion, my local REACT club has an old club license (these are no longer authorized), so it falls within the regs which I've ignored here that deal with non-individual licensees. And we're back to my quandry over Phil Kane's post: is our participation in charitable events as communications teams a part of our 'business'? If we didn't have a club license, would our participation on individual licenses be a part of our personal activities? As a lawyer, I appear to be able to transmit messages concerning my business activities (I guess I can call the opposing lawyer on his GMRS radio and tell him I'm suing? :-> I can't quite figure out how I can use it "concerning the licensee's ... business activities," but I'm sure someone will as it applies to us lawyers).

The beer's on me, Ron, the next time you're in the San Francisco Bay Area. I'm not likely to be in Vermont in the forseeable future. Brrrr!

> Of course the 2000 restructuring was at the tail end of the Clinton
> administration.

In the end, the decisions being made by the FCC regarding amateur
license requirements are pretty far removed from the philosophical
and political positions of democrats as opposed to republicans.
Medical waivers were far more likly the case of the FCC understanding
that without such waivers, the courts would rule against a 13/20 requirement
for handicapped hams anyway. Once that happened, the rest follows
in progression. I firmly believe the courts would not
require any morse test if it was challenged on that basis if it wasn't
for the international treaty.

Add to the above the fact that morse is largely a non-used mode
outside of amateur radio and any past justification for a "pool of
trained morse operators" goes up in smoke.

Cheers,
Bill K2UNK

>Hi, Phil,
>
>Uh, personal business? :-> What does _that_ mean?

Judge Samuel Conti (N Calif Federal District) once made a
hand-written change to a search warrant we had applied for, changing
the "standard" wording of "...using necessary force..." to read
"...with force deemed appropriate..." When I asked him
(respectfully, of course) what that meant, he replied "screw up and
you will find out". <ggg>

It was my typo. Section 95.181(a) uses the phrase "...concerning
the licensee's personal or business activities". The "or" got lost.

Sorry for the confusion.

It would be tough to say what is prohibited. I could claim anything
I talk about to be "my personal or business activity". Who could
argue otherwise?

> The other sections state that transmissions may be to
> "other GMRS stations at any geographical location ... ." (Section 95.101)

Your first mistake was in applying for license. By doing so, you
voluntarily subjected yourself to unconstitutional bureaucratic
rules. No one in my county ever applies for a bureaucratic license
of any type. We are "state citizens," not subject to unconstitutional
federal bureaucratic rules. We do not allow federal bureaucrats
to trample the U.S. Constitution and the Bill of Rights.

Great! Thanks a lot for the info; it should open up all sorts of
possibilities. I'm correct in my assumption that everyone (or at least
every family) needs to buy their own license, since there's no non-individual
licenses being given out?

Yea, that's one of the things some of us here would like to do; support
local events. We've got a bunch of FRS units we use now, and some aging
and near-death green dot and blue dot units (which we have a perfectly useless
license for, thanks to murs)... We were looking at GMRS as a extremely
cost effective way to consolidate systems, and keep the range we need for
the extreme ends of our stuff.

> The beer's on me, Ron, the next time you're in the San Francisco Bay

Virginia, actually. vt.edu stands for Virginia Tech. Vermont is
actually uvm.edu. As I recall it stands for the latin for "university
of the green hills" or some such. Years ago, when people had to start
picking domain names, I argued for vatech.edu, because vt.edu would be
potentially confused with vermont, given that vt is the darn state code
for vermont. I was told "noooo, that'll never happen. and vatech.edu is
too much to type." Sheesh. For the record, yea, happens all the time!

Much colder than the bay, but not nearly as bad as vermont.

Exactly. Lets hear Lance Bass proudly proclaim he is a Ham. He could do this in press interviews or even in a music video as you just suggested.

>Except the FCC says no music over ham radio.....
He doesn't have to do this over Ham Radio. He could praise Ham Radio in press releases and in music videos.

None of his videos would be interpreted as Ham Radio by the general population or we would have heard about it.

Yeah! You're right -- I know someone from UVM once in Texas, and it means green mountains. I couldn't figure out why it wasn't UV, but that leads to its own misunderstanding, I guess.

> Much colder than the bay, but not nearly as bad as vermont.

You're still on for a beer (or drink of your choice) next time you're in the area.

>license requirements are pretty far removed from the philosophical
>and political positions of democrats as opposed to republicans.

Maybe. But the pattern is pretty consistent since the end of WW2, at least.
Even back as far as 50 years ago: FCC enacts a big restructuring in 1951 after
years of discussion, (HST in White House) then in late 1952 (right after
Eisenhower is elected) chucks out most of it so that Generals and Conditionals
get everything. Eisenhower administration gave us 27 MHz cb, too.

The first time FCC proposed a nocode ham ticket was in 1975 (Ford
administration). Second time was 1983 (Reagan administration). VE system? 1983.

Correlation is not proof of causation, of course. But it sure is a correlation,
dontcha think?

>Medical waivers were far more likly the case of the FCC understanding
>that without such waivers, the courts would rule against a 13/20 requirement
>for handicapped hams anyway.

What courts? Waivers were the result of a foreign king asking Papa Bush for a favor. Plain and simple. No courts involved.

> Once that happened, the rest follows in progression.

Papa Bush also wanted an end to maritime Morse requirements, because they effectively mandated that ships have radio operators. Said ops have to be paid, and shore stations (with operators) have to exist for them.

>I firmly believe the courts would not
>require any morse test if it was challenged on that basis if it wasn't
>for the international treaty.

I don't believe that, but it's a moot point. Nobody has ever brought such a case to court, have they? And it's not likely in the foreseeable future.

>Add to the above the fact that morse is largely a non-used mode
>outside of amateur radio and any past justification for a "pool of
>trained morse operators" goes up in smoke.

The idea that Morse MUST be tested so that there is a reserve of trained operators for other services was once valid, but not any more. But that is only one reason for a Morse test, and not one I've agreed with for at least 25 years.

Fun historical fact: There were about 50,000 licensed US hams on Pearl Harbor day. About 25,000 of them served in our nation's armed services during WW2, where there Morse and technical skills were needed. Many thousands of others served in nonmilitary but war-related ways (merchant marine, instructors at radio schools, development of things like radar and the proximity fuse, etc.)

Yes, Morse is largely a non-used mode outside of amateur radio. But it's extensively used in amateur radio, and it's amateur radio that we're talking about.

>in.

No, the real dumbing down of "Ham" Radio, is requiring Morse Code in order to
obtain a higher class license.

The sad thing is you honestly believe that memorizing an encoding scheme is
more important in Amateur Radio than the testing material. And those that
memorize the encoding scheme should have the higher class license.

>And most likely
>you would be still Whinning how you were being mistreated because you couldnt
>or wouldnt learn the Basic material to be a real ham.

I am all for learning the material to get the license.

You just said it to be a "real" Ham you have to learn Morse. This is consistent
with my claim that Ham radio is a cult. Who wants to communicate by tapping
keys? So, its a boring cult.

I am not a "Ham".

True...BUT, had waivers not come about in the manner in which they did,
the courts would have been engaged by someone...especially with the
ADA.

But use alone, even if only in amateur radio, has NOT been accepted
by the FCC as a rational to continue code testing.

Cheers,

More "make the facts fit my agenda" on your part. Never once did FCC ever indicate that it ever considered such a situation. Nor was the medical waiver rule the result of any FCC proceeding whatever. Bush41 got a call from Jordan, he made one to someone in charge at the FCC and presto! we got medical waivers.

That's why it was written that way. It would exclude
communications relating to someone else's personal or business
axtivities in which the sender were not involved. See my tale
of woe in another post on this same thread.

The GMRS rules were rewritten several years ago in an effort to
exclude it being used for company business communication (wanted
to get them all on Business Radio or even ESMR/Nextel) but ooops,
there were lots and lots of those pesky company licensees that
they had to grandfather somehow.

The main benefit of the rewrite for me was to authorize all GMRS
licensees to use all GMRS frequencies except for two channels
north of Line A, but the latter were grandfathered anyhow if
they were licensed for those channels at the time of the
rewrite (as I was).

Tes on both.

Early in my career with the FCC we cited a railroad for
transmitting non-business communication because train crew
members were monitored having an extended discussion over what
to order for lunch. We received a multi-page reply back from
their legal department citing (with attachments) the fact that
their contract with the union obligated the railroad to provide
a meal to the train crew if certain work conditions existed,
yakety yackety yack, and therefore the cited communication was
in fact official business of the railroad. We had to agree with
them and from that point on we were always quite liberal in
stretching interpretation of "personal and business activities"
as applied to most radio communications. That attitude did not
carry over to the prohibited types of communication in the
Amateur Radio Service (Sect. 97.113), though.

>As a lawyer, I appear to be able to transmit messages concerning my
>business activities (I guess I can call the opposing lawyer
>on his GMRS radio and tell him I'm suing? :->

And there goes security and client confidentiality out the window......

>I can't quite figure out how I can use it "concerning the licensee's ...
>business activities," but I'm sure someone will as it applies to us
>lawyers).

Simple - if you are the licensee. Business activities include
such things as ordering office supplies, when to open the
office on weekends, why to pay the rent on time, etc. I would
steer very clear of discussions imnvolving cases - GMRS is even
more insecure than cellphones.

If you are referring to the client as the licensee, not so
simple. The rules do not permit an "agent" to operate under
the license, only an employee.

>The beer's on me, Ron, the next time you're in the San Francisco Bay

Well, I'm sorry to say that it hasn't happened _yet_. The legal technology section disbanded from lack of attendance -- after you left, so I'm assuming you were holding it together. :-)

Keep out of touch on that stuff, and let's stick to beer -- when are _you_ due back down here?

Let your education beging now. Contesting is sport in that it is
competitive. Winning takes skill and experience and planning. The
people who want to tap keys all the time to communicate are the
participants. Any more questions I can clear up for you?

It's a competitive activity where skill and endurance are tested. Also tests equipment performance. Just like auto racing, sailboat racing, target shooting and a bunch of others. It's nice, too.

>And, about CW, who wants to
>tap keys all the time to communicate?.

There were several thousand of us on the air last weekend doing just that. It's a lot of fun, once one has the basic skills. Have you ever actually tried it?

btw, it's a pretty good bet that almost everyone who posts here is communicating by tapping the keys of their keyboards.

Yes it would, and without the content and other restrictions
that are imposed on non-individual licenses. Namely you can put up
any amount of repeaters, and any amount of stations. Wacky ain't it.

>furiners(foreigners)

You got the right answer but with the wrong reasoning.

Except for emergency situations and certain paging operations,
one-way communications are not permitted in GMRS.

HOWEVER, the rules have always been interpreted to permit
intercommunication between stations, not restricted to those
stations within a single system, if the message content is
related to the personal business of the licensee(s).

The rule wording is a bit confusing for someone who isn't all
that familiar with how FCC rules are interpreted, but that's
the kind of stuff that I do for a living....piece of cake.

Yup. Most important, it goes against the idea that "liberals" or
"democrats" have somehow been responsible for changes in license
requirements that are perceived by many as "lowering the standards".

Groups like Handi-Hams go back well before 1990, yet I know of no
action by them or any other advocacy group to challenge FCC test
requirements. Just not an issue. ADA is meant to insure equal access,
not equal result. Example: allowing examinees to speak the received
code, use a keyboard or Braillewriter instead of writing.

I'd say the "pool of Morse operators" thing ended with the maritime
changes. Not before.
>
> > But that is only
> > one reason for a Morse test, and not one I've agreed with for at least 25
> > years.
>
> Any other reasons have been rejected by the FCC.

FCC isn't infallible. FCC gave us incentive licensing, repeater rules
that were stricter than those for commercial services, 27 MHz cb, and
lax enforcement. FCC also punishes hams for the misdeeds of nonhams
(RF power amplifier restrictions).

One thing many hams I know would like is a strap-on 100-150 W amp for
the HF QRP rigs. 3-5 watts drive, 100-150 watts out. Run QRP when
conditions permit and when you're in the field or on battery, kick in
the amp when needed. Would be a big help in compliance with the
minimum power rule, plus you don't lug the amp around in the field.
But such amps are illegal unless homebrewed by a ham because a cber of
freebander might misuse them. In fact, selling kits for such an amp is
illegal.

Does this stop any cber or freebanders from running high power? Of
course not, they just buy amps from vendors who flout the law. But FCC
still thinks hams must not be restricted.

See rant above about FCC logic wrt amateur rules.

Here's another point:

One thing bedeviling the FCC is the continued existence of freebanders
and cbers running excessive power and violating the rules. FCC would
be much happier if all those folks got ham licenses, so FCC has an
interest in making ham licenses easy to get. Thus the changes in both
code and written test requirements over the past 20 years or so.

Dick, don't be absurd. I didn't even know you (who does?) at the
time. I merely pointed out some Morse Myths, such as "benevolent
Extra Class operators cruising the Novice CW subbands handing out
contacts and offering encouragement." Get over it.

> permission,

Wow, now there's something worse than an NCT. Who would have thought?

So basically, when your Commander gave an order, you told him it
wasn't legal until he put it in writing. No wonder you're called
DICK.

Code is good for you. Faster code is even better. Are you claiming
that you are the fastest codester in the world?

Or maybe code isn't all that important, even to the most embittered OM
on policy.

I'm heavily involved in the PAQSO party. If you don't think that
contesting is a sport, I suggest you subscribe to their reflector.

The competition is very intense. Fun too, but I'd be interested in the
responses you would get if you posted your query there.

As for wanting to tap keys, whatcha doing here (unless you use voice
recognition software to compose messages! ;^)

>btw, it's a pretty good bet that almost everyone who posts here is
>communicating by tapping the keys of their keyboards.

I do not have to learn an encoding scheme to do that. Morse code is an encoding scheme. Its not that I can't do it. I have learned more complicated encoding schemes. I just dont find Morse Code useful and/or interesting,

>It's a competitive activity where skill and endurance are tested.

It makes people feel like the have skills at the expense of real skills, like distance, and setup time. Endurance=how fast you can turn the radio dials and log in contacts.

>> a lot of fun, once one has the basic skills. Have you ever actually tried
>it?

Yes, at Field Day. Contesting is not fun. After about 20 QSOs it gets boring. Don't you get bored doing the same thing over and over again for hours?

Also, how can someone find Morse Code interesting? Its curious to see what motivates a newcomer to want to learn code. Who wants to be able to recognize some dot and dash patterns when they don't have to? And all the other language abbrevations. This is just plain weird.

I am not a "Ham". I am not a cult follower.

Who wants to poke sticks at hams who do enjoy morse code? Who doesn't enjoy the ARS, yet still feels compelled to post in a policy group for amateur radio?

It's a free newsgroup, you're welcome to post here regardless of your inclination. But if you are confused as to hams can possibly enjoy their chosen hobby, allow how some hams have a little trouble understanding why you would find any point in being interested when you aren't interested

> I am not a "Ham".

Now there is a real surprise!

> I am not a cult follower.

But you must have enough free time to constantly post in a group in which you have avowed disinterest.

....but enough of you wasting my time..... plonkeroo!

Military Thanks!

If you are so inclined, visit the Department of Defense web page below and sign a brief message thanking the men and women of the U.S. military services for defending our freedom. The compiled list of names will be sent out to our soldiers at the end of the month. So far, there are only about 1,206,647 names. What a shame. National Military Appreciation Month (please pass it on to your email friends)

>> It's a competitive activity where skill and endurance are tested.

> Speaking of endurance, how come every time I'm on a run, I have to pee?

'Cause you haven't learned to get totally empty before you start. Been there, done that. (2 Philadelphia Independence Marathons, many half marathons and 10 milers)

I used to be an evening runner. Now I'm a morning runner, and I have to get up at least 45 minutes before heading out the door so there's time to get things cleared out.

I have found that my running performance is directly correlated to contest endurance.

One thing I'd really like to try is radio-orienteering. Runners with DFing receivers have to find a series of hidden QRP beacon transmitters and return to the start point in the least time. Fastest runner is not always the winner. Tally Ho!

I was down there three weeks ago to co-conduct a CLE seminar on amateur radio regulatory issues, particularly tower zoming and permit issues and what the FCC is doing to/for amateur radio, at the ARRL Pacific Division Convention (Pacificon).

I co-conduct that dog-and-pony show twice a year - in Concord, CA at Pacificon in October, and in Seaside, OR at SeaPac, the ARRL Northwestern Division Convention in June. An easy 4 units of CLE for those attorneys who attend it.

(That brings this discussion back to amateur radio policy.....)

I believe that with a little research, you'll find that this quote is correctly
attributed to British playwright George Bernard Shaw, as credited by
Gen. Patton during a speech he made in England, and as depicted in
the movie "Patton."

I like two license classes also. A beginners licenses limited for
safety reasons and material written to perhaps the 8th grade level,
and a full license.

All of the classes have caused a problem. When I was
> first licensed, I was a novice. The general class had full access to HF.

>Oh My God, Someone call the FCC and cancel all radio spectrum use except
>for cell phones

That may not be too far from the truth. Read comments on Chairman
Powell's plans to reorganize spectrum management to a "consumer friendly"
initiative.

I am all for making spectrum available for new technologies as they become
available, or reorganizing allocations as necessary as need arises, but his
initiative sounds a bit dangerous to me.

>
> So you know no more about it than that. Yet you claim expertise. That makes
>you
>look pretty stupid.

I never claimed expertise. I never claimed I knew Morse code. I only know two letters (for SOS).

>But you insist on claiming
>knowledge of Morse code operations as though you fully understood it.

Morse code is a substitution of dots and dashes for letters. Therefore it is an encoding scheme.
Its an encoding scheme one must recognize and be able to send real-time. This is obvious.

Others may find this interesting or not. I do not find it interesting and don't understand why others do.

>> Yes, at Field Day. Contesting is not fun. After about 20 QSOs it gets
>boring.
>> Don't you get bored doing the same thing over and over again for hours?
>>
>
>Because you do everyone must?

No, but the majority of non-Hams would. Contesting would not be the way to get new members into Ham Radio.

>And all the other language
>> abbrevations. This is just plain weird.
>
> That's your personal misperception. The fact that you can't see beyond it
>makes
>you look stupid.

Its a "misperception" shared by many. I mentioned Ham Radio to a non-Ham he said it's some cult. He also asked if they still used Morse Code. He also compared Hamfests to a Star Trek convention.

I dunno, Dan! I'm only 20 +/- miles from Interstate 24, and I am hearing enough traffic on 151.82 and .88 to know there's more than a couple rigs out there! The guys who are anxious to get away from the "10-4 good buddy" crowd will move first, however when the other guys realize that that is where everyone one else went, it won't take long.

I don't understand why others like punk rock or Chevrolet's, but I do not
go into any newsgroups on those topics and harrass them about it.

>No, but the majority of non-Hams would. Contesting would not be the way to
>get
>new members into Ham Radio.

Proof of stupidity. MANY persons enter MANY activities for contesting
purposes. I personally know SEVERAL Hams who are hardly ever on the air EXCEPT
for contests.

You obviously do not understand the human spirit to compete.

>Its a "misperception" shared by many. I mentioned Ham Radio to a non-Ham he
>said it's some cult.

I think you're lying. No...I KNOW you are lying.

>He also asked if they still used Morse Code. He also
>compared Hamfests to a Star Trek convention.

How can he compare one to the other if he's NOT a licensed ham nor been to
a hamfest?

What a lying putz. ANOTHER lying putz, I should say.

Apply yourself, Waddles...use whatever brain cells you have left. Not everyone has a CW station "strapped to" their (note the possessive usage of the word, there) body either. You see, those trained in Emergency Communication are *prepared* with what they can contribute--but they may very well not have anything "strapped to" their body at all times.

Good grief, man, how much alcohol *have* you consumed in your life?

Arcane bureaucratic psycho-babble "rules," neither understood
nor much less obeyed by anyone. Such bureaucratic
psycho-babble serves the sole purpose of justifying the
position of the bureaucrat who composes said "rules." Similar
bureaucratic nonsense accounts for tens of thousands of
overpaid federal "positions" held by bureaucrats who compose
and crank out arcane useless rules by the bushel every year, while
we the taxpayer foot the bill by paying federal taxes to support
such bureaucratic nonsense. Get a clue! The mood is shifting in
the country, as evidenced by last Tuesday's elections. Joe Six
Pack is sick and tired, fed up, pissed off, and pissed on, working
12 hours a day to pay lavish salaries and benefits to federal
bureaucrats whose sole purpose in life is to compose "rules" which
make Joe's life more miserable and more difficult to support his
growing family. I've seen all kinds of shit and abuse heaped on
truck drivers by the Sanhedrin in this NG. Got news for you
"talking heads," as another poster calls you fools, truck drivers ARE
America, and paper-pushing rule-writing federal bureaucrats are
SHIT. That's right, SHIT, not fit to breath the smoke blown out
of the exhaust pipes of an 18-wheeler. Here's my message for
you, FUCK YOU and FUCK the horse you rode in on!!!!!!!!
Get a clue & Get a life.

>>new members into Ham Radio.
>
> Proof of stupidity. MANY persons enter MANY activities for contesting
>purposes.

You used the wrong word. The word is "competetive", not "contesting". This is consistant with my previous post that contesting makes people feel they have skills at the expense of real skills like distance scores, station setup time, radio direction finding. The skill (potentially) involved in contesting is a side effect of the end goal.

Lets say contesting is competetive. Then, its still boring. Contesting would not be the way to get new members into Ham Radio because the activity is boring.

I personally know SEVERAL Hams who are hardly ever on the air
>EXCEPT
>for contests.

Good for them. I have nothing against that.

>Its a "misperception" shared by many. I mentioned Ham Radio to a non-Ham he
>said it's some cult

I mentioned Ham Radio and the non-Ham DID ask if that was some kind of cult.

>>He also asked if they still used Morse Code. He also
>>compared Hamfests to a Star Trek convention.
>
> How can he compare one to the other if he's NOT a licensed ham nor been
>to
>a hamfest?
>

He must have heard that Ham Radio operators used Morse code from somewhere. I told him about Hamfests and then he asked if that was like Star Trek conventions.

So, you see, there's a perfectly logical reason for what he said.

>amateur radio?

If the epitome of amateur radio experience is morse code use on
the air, then the "stick poking" charge is valid.

Unfortunately, the "expertise" self-description of use of morse code
as the paramount method of communication is a label applied by
only the PCTA regulars in this chatroom. It is virtual, not real.

Those who feel "injured" or even "outraged" by a demonstrated non-
love of morse code should recognize they are not "leaders" of
standards or excellence except within their own clique/cult.

> It's a free newsgroup, you're welcome to post here regardless of your
>inclination. But if you are confused as to hams can possibly enjoy their
>chosen hobby, allow how some hams have a little trouble understanding
>why you would find any point in being interested when you aren't interested

In order to GET INTO legal amateur radio on frequencies below
30 MHz it is necessary to demonstrate International Morse Code
proficiency as part of the amateur radio license test. Since a
morse code test had been part of the test since the first US radio
regulatory agency of 1914 and never removed for privileges below
30 MHz, it means that every single US radio amateur with such
privileges is/was code-tested. That, by itself, is not a reason for
the continued existance of the code test...or that "all" radio amateurs
"enjoy their hobby."

It is a misuse of logic to equate "interest" with morse code skill or as
some de facto "affirmation of devotion to standards/tradition" to be
demonstrated. Morse code testing is only a legal requirement to get
into the hobby. Only one other radio service in the USA requires such

skill and it is a commercial service.

The false charges of "hate" or "intolerance" leveled against those who are NCTAs indicate only that PCTAs using such phrases are simply trying to heckle, abuse, bully NCTAs for not living up to their personal standards. See Robeson, Heil, Carroll, Roll, et al, statements in here in public view.

>> I am not a "Ham".
>
> Now there is a real surprise!

The label of "ham" originally came from professional ratiotelegraphers regarding amateurs. It was a derogatory term used by pros.

Those radio amateurs who remain steadfast in living a hobby lifestyle of yesteryear generally express antipathy towards radio professionals. It should be rather obvious that "ham" is a contraction of the word "amateur" sufficient that it does not contain emotional baggage referring to an amateur status. Radio amateurs often consider themselves "professional" in their amateur radio activities just by virtue of tenure and activity. Unless they derive income from such amateur radio activities, they are not, legally, professionals.

>> I am not a cult follower.
>
> But you must have enough free time to constantly post in a group in which
>you have avowed disinterest.

Again, false charges. Several of them.

"Interest" does not require absolute belief-obeyance of standards and practices as demanded by a minority of amateur radio licensees or the largest US amateur radio national membership organization.

Strict, near absolute adherence to outdated standards and practices in a hobby activity is seen by many as a "cult following." Especially so when such cult members demand keeping regulations carrying the code test as a pass-fail test element...simply because they personally chose to take such a test. Those who demand to keep the standards and practices of their youth for all those yet to come have not demonstrated any viable reason for such regulation retention other than they did it, therefore others must do so also. That is a rather obvious indicator of a "cult following."

"Constantly" using "free time" to post opposing opinions is invalid. That is merely emotionally-loaded phrasing based on personal perceptions...an effort to heckle another of opposing opinion and to self-righteously claim their way is "the only way." It isn't the only way.

> ....but enough of you wasting my time..... plonkeroo!

If your personal time is "wasted" in this chatroom, why take such (valuable?) personal time to reply?

Rhetorical question. Obviously you wish to reply to this opposing viewpoint and to claim your personal preferrences in amateur radio are shared by all radio amateurs or at least represent the mainstream opinion in US amateur radio. That indicates a self-righteous attitude aligned with the PCTA group.

The NCTA is of the opinion that removal of the code test represents an element of freedom in a non-professional avocational activity involving radio. Such test removal does not guarantee anything but a freedom from that current restriction in regulations.

Those who advocated keeping the code test have yet to validate it for practical purpose in regulation. All they can come up with is the trite "it is what hams DO" or that they had to test for it, therefore all others have to also. Strictly personal preferences embelished with self-described amateur patriotism as if their way was the only way. Invalid.

I passed the test, at least I don't stop while the run is going on. Poor
old Vshah doesn't understand the thrill of working a late night shift on
75 meters, and working non-stop till dawn, with no breaks.

This creep can't keep up with his own shadow, let alone a "run" during a
contest...Let's kiss this creep off.

>You used the wrong word. The word is "competetive", not "contesting".

You're unfamiliar with the definition of either. A contest IS
competitive, and vice versa.

>This is
>consistant with my previous post that contesting makes people feel they have
>skills at the expense of real skills like distance scores, station setup
>time,
>radio direction finding. The skill (potentially) involved in contesting is a
>side effect of the end goal.

You want to define only certain "skills" as "competitive". I know folks
who can set up the finest stations but can't do the actual on the air operating
worth beans...And again vice versa...I know guys (and a couple gals) who are
the finest operators who can't tell you the difference between "9-1-1" and a
"PL 2-5-9"

>Lets say contesting is competetive. Then, its still boring.

It's boring to YOU. So move on. There's a ton of stuff to do within
Amateur Radio that I am sure you will find satisfying...IF you get a license.

>Contesting would
>not be the way to get new members into Ham Radio because the activity is
>boring.

Contesting would not be the way to get "everyone" into Amateur Radio. It
has and does still appeal to certain people for JUST that reason.

Sorry you're too narrowminded to see it.

>I personally know SEVERAL Hams who are hardly ever on the air
>>EXCEPT
>>for contests.
>
>Good for them. I have nothing against that.

Yes you do. You've said it here.

>So, you see, there's a perfectly logical reason for what he said.

No, there's not. There's no way for anyone to make an analogy between any two events or circumstances that they have not personally experienced.

Troll...troll...troll...What a PUTZ.

>That, by itself, is not a reason for
> the continued existance of the code test...or that "all" radio amateurs
> "enjoy their hobby."

Yes there is...It's called "the law". The United States is required to adhere to treaties that it has signed on to, and we are bound by ITU commitments.

Lennie the Rear Area War Hero, who lambastes fellow veterans and tries to embellish his own "war record" by associating himself with fellow veterans KIA'd three years before he was in-theater, would have the uninformed and the ignorant beleive that it's a simple matter of ignoring international treaties.

Leonard H. Anderson, ex-RA-16408336, US Army 1952-1960 is a fool.

The United States has put itself up as the milestone by which democracies should be gauged. And right we should. But we CANNOT be that watermark if we talk highly from one side of our mouths and then do just the opposite on the other hand.

Leonard, we either abide by the law, or we will be as ripe for targeting as a "rouge" nation as Iraq is.

That this particular law pisses you off is irrelevant.

>>> I am not a cult follower.
>>
>> But you must have enough free time to constantly post in a group in
>which
>>you have avowed disinterest.
>
> Again, false charges. Several of them

Not at all surprising in as much as Lennie the Loser is the exact same mold. No Amateur license...no vested interest in Amateur Radio...Avowed to not BE licensed...In other words, a TROLL.

I can't imagine spending as much of my retired years being as foolish and as venomous as Lennie is. Now we have "vshah". I am not convinced they are not one in the same.

>I do not have to learn an encoding scheme to do that.

Yes, you do. The written word is an "encoding scheme" for the spoken word. Unless you use voice recognition and test translation systems, you have to know the "encoding scheme" to post or read this newsgroup, or any data mode.

>Morse code is an encoding scheme.

That's part of it, yes. It's a unique mode, however, because it can be aural, visual or tactile, and yet it's text-based.

>Its not that I can't do it.

Can you do Morse or not?

>I have learned more complicated encoding
>schemes.

Such as?

>I just dont find Morse Code useful and/or interesting,

Understood. But your posts indicate that you don;t think anyone should find it useful, or interesting.
>
>>It's a competitive activity where skill and endurance are tested.
>
>It makes people feel like the have skills at the expense of real skills, like

There's a lot more to it than that.
>
>>> a lot of fun, once one has the basic skills. Have you ever actually tried
>>it?
>
>Yes, at Field Day.

You did Morse on Field Day?

> Contesting is not fun. After about 20 QSOs it gets boring.

For YOU. Not for others.

>Don't you get bored doing the same thing over and over again for hours?

Not if it's something I enjoy.

But nobody is saying you must contest, or use Morse code.
>
>Also, how can someone find Morse Code interesting?

It's unique and different.

>Its curious to see what
>motivates a newcomer to want to learn code.

For me it was the desire to get the license, and then to contact other hams on
the air.

>Who wants to be able to recognize
>some dot and dash patterns when they don't have to?

It's fun, for one thing.

> And all the other language
>abbrevations. This is just plain weird.

No, what's weird is your telling others what they should and should not like.

Do you criticize other sports and hobbies?

>I am not a "Ham".

I realize that you have some unique definition of "ham" that is somehow
different from "radio amateur" and "amateur radio operator", but to everyone
else those three terms mean the same thing. Get used to it.

> I am not a cult follower.

Then what is your interest?

>as being a handicap.

Let me expand on this a bit.

Most people don't find the written tests to be impossibly difficult. But there
are some
people who have learning disabilities which make the writtens much more
difficult. I
elmered one guy who tried and failed the old Advanced written 9 times before I
met
him. His problem was that he just wasn't very good at math and formulas, and
the old
Advanced was full of 'em. I've known others who find memorizing things like
band edges
and mode designators to be extremely difficult. These people are not "stupid",
"lazy" or
"unmotivated" - they simply have specific learning disabilities. Intelligence
is at least a
seventh-order vector quantity, not a scalar one.

>> FCC isn't infallible.
>
>So just which reason that wasn't accepted by the FCC
>should not have been rejected?

Here are some (just my opinion):

1) License tests should be about the things the license allows the licensee to do, and that are commonly done by licensees. Lots of Morse code on the HF ham bands. And there's no reasonable way to test Morse skill on a written test.

2) Morse has a symbiotic relationship with simple radio equipment. Very useful for those who want to build and learn about basic radio.

3) Hams using Morse are overwhelmingly well-behaved on the air while using the mode. Check the FCC enforcement actions involving licensed hams - practically all of them are for voice operation.

4) Morse is spectrum- and power-efficient, allowing hams to get the most out of their HF bands without having to invest in data modes.

Of course the FCC disagrees, and it's FCC opinion that makes the rules.
>
>> FCC gave us incentive licensing, repeater rules
>> that were stricter than those for commercial services, 27 MHz cb, and

>> (RF power amplifier restrictions).

Do we need more proof of FCC fallibility? IOW, just because FCC believes it doesn't make it right, or good for the ARS. Just legal.
>

>
>They aren't totally illegal. The limiting factor is when they can
>be used in the 27-28MHz range.

No, there's more to it than that. Even without 10-12 meter coverage, such amps cannot be FCC approved for sale. Drive level is too low.

>
>> Does this stop any cber or freebanders from running high power? Of

>Many hams USE spanish, and other languages. There's
>no reason or rational to require knowledge of Spanish.

How many US hams use Spanish or other languages on the air, compared to how
many use Morse on the air? The number is very small.

Which brings up a question - is it possible for a person (say, a legal resident
alien intending to become a citizen) to get an FCC ham license if they do not
speak a word of English?

>> Here's another point:
>>
>> One thing bedeviling the FCC is the continued existence of freebanders

>
>I totally disagree that the FCC had any such expectation
>or hope on that basis.

Your opinion noted, Bill, but please consider the following possibility:

Suppose, just suppose, my theory is correct, and FCC wants to reduce ham license requirements as much as possible in order to counteract the freebander/illegal cber problems. Do you think FCC would tell any of us about it? Of course not!

We used to call it Armistice Day, now we call it Veterans Day. The
Canadians have it right -- they call it Remembrance Day.

A Canadian soldier wrote the following in 1915 during the Battle of Ypres.

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place; and in the sky
The larks, still bravely singing, fly
Scarce heard amid the guns below.

We are the Dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved, and were loved, and now we lie
In Flanders fields.

Take up our quarrel with the foe:
To you from failing hands we throw
The torch; be yours to hold it high.
If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields.

"Phony callsigns" are a bad thing you say....??

Apparently on ham radio of late it's OK. (?)

2 see what I mean, listen into the Eastern Regional Patriot's Net
on LSB ham radio 3.860 mHz at 8:00 PM Eastern time.
This net meets every night including weekends.
There are occasionally one or two un-licenced "militia radio"
stations that are acknowledged by he NCS, check in and then
converse with regular hams on this Net, using tactical
callsigns (non-ham radio calls) like "Orange Blossom" and
similar monikers. This happens on an almost nightly basis.
Been listening in for 2 months to all this and seems the
FCC couldn't care less.

Phil. Thank heavens. Someone who understands. Money talks. Yepper. Now just wait until we get the equivalent of eliminating all rules and road tests for drivers' licenses. It will be the same. On MURS open, Stewart allows that 2 watts into a 12 dBi gain antenna on both ends will allow likely 60, perhaps 80, mile communication. Someone will figure out it is easier to use a 6 dBi stick and a 50 watt radio. Unfortunately, many think the hams are simply trying to enforce regulations - if some of these folks thought about what would happen if there were no rules for the road - no traffic lights - no stop signs - no speed limits .... this could be where we are headed. Granted it won't happen overnight, but ...

> rudeness here would translate to anything but rudeness on the air.

OK, there it is. The only "band/mode" Brainiac runs is RRAP. Thought so. End of.

Here is just a bit of info on the murs allocations...

MURS permits the use of a variety of emission modes, but the most common is
analog voice using FM modulation. Data communications are permitted, but
under the new rules, the FCC will prohibit image transmissions. [95.401]

Very narrow bandwidth transmissions (maximum 11.25 KHz channel bandwidth,
with +/- 2.5 KHz deviation) are permissible on all five MURS channels. Under
the new rules, the older +/- 5 KHz deviation signals (with a maximum 20 KHz
channel bandwidth) will also again be permissible, but only on the two upper
channels (in the 154 MHz band). [95.631]

Under the new rules, the FCC will prohibit continuous transmissions in any mode. [95.631(j)]

Under the new rules, the maximum permissible Transmitter Power Output (TPO) will be 2 Watts. There will be no limit on antenna gain. [95.639(h)]

MURS is intended for short-range local communications. Under the new rules, antenna height will be limited to 20 feet above structure or 60 feet above ground, whichever is the greater. [95.1315] Repeaters will not be allowed. [95.1311]

No license is needed. MURS is available for unlicensed business or personal use as described in this discussion. [95.1301]

Radios suitable for use on the MURS channels are now available from dozens of different manufacturers, and are sold by several online companies and by consumers electronics store chains.

514. MURS Questions

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-10 05:06:45 UTC
From: Opie <CrispyCritters@stirfry.com>
Message-ID: <aqkpelrsc0@pita.alt.net>
Source record: 54754

May I connect an external antenna or power amplifier to my MURS radio?

The FCC Rules permit connecting an external antenna to your MURS radio. However, the new FCC Rules will limit the height of your antenna to a maximum of 20 feet over the mounting structure (exclusive of the tower, mast or pole on which it is mounted), or to 60 feet above ground, whichever is greater. (These are the same limits that apply to the original Citizens Band Radio Service at 27 MHz.) [95.1315]

What are the MURS channels?

Channel (MHz) [95.632]

151.820 MHz
151.880 MHz
151.940 MHz
154.570 MHz
154.600 MHz

Must I identify my MURS station or transmissions?

You do not need to identify your MURS station by any particular callsign or other designation.

May I set my MURS radios up as a repeater station?

The new MURS Rules will prohibit MURS repeaters. This prohibition will include both conventional repeaters (which retransmit a signal nearly simultaneously on a different frequency) and store-and-forward repeaters (which retransmit the signal after a time delay, often [but not necessarily] on the same frequency). [95.1311]

May I use my MURS radio to transmit data communications?

Yes, so long as the emissions are authorized in 95.633 of the FCC Rules. The maximum authorized bandwidth is 11.25 KHz on the three 151 MHz frequencies (151.820 MHz, 151.800 MHz and 151.940 MHz). Under the new rules, the maximum authorized bandwidth will be 20.0 KHz on the two 154 MHz frequencies (154.570 MHz and 154.600 MHz). [95.631(

What kind of range can I get from a MURS radio?

At the 150 MHz frequencies of MURS, communications range is dependent on antenna height and on the surrounding environment. Range between two handheld MURS radios will vary, but should be between a half mile to perhaps several miles (in open terrain with no obstacles). If you are using the radios inside a vehicle, the range will be somewhat less.

An advantage of MURS is that you may connect an external antenna to your radio. Using an antenna mounted on the vehicle's roof, and communicating with another similar unit, you should expect to get at least a couple of miles (except in the most harsh conditions), and possibly up to ten miles or more.

Using a base station-type antenna, you should be able to communicate with a vehicular-type MURS unit described in the previous paragraph over a range of three to perhaps ten or fifteen miles. From that same base station, you might get two to six miles communicating with a MURS handheld radio.

Base-to-base station communications should be possible over at least several miles, perhaps up to twenty miles or more on a clear channel. However, this kind of operation is not consistent with the traditional use of these frequencies for short-range base-to-mobile and mobile-to-mobile communications.

You can check out http://www.provide.net/~prsg/murshome.htm for more information.
Of course the CB'ers will soon find a way to trash out this new service....

515. ARNewsline 1317 - Nov 8 2002

Amateur Radio Newsline™ Report 1317 – November 8, 2002

Amateur Radio Newsline report number 1317 with a release date of hFriday, November 8, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Some good numbers for ham radio here and across the seas. The hobby is growing once again. Find out the details on Amateur Radio Newsline report number 1317 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: GOOD NUMBERS IN THE USA

The numbers are in and they speak for themselves. Restructuring is finally having a very positive impact on ham radio growth here in the United States. Amateur Radio Newsline's David Black, KB4KCH, has the good word:

--
Last year at this time there were nearly 683,000 hams licensed by the FCC. As of October this year, there are 2235 fewer--but numbers are not always what they seem. The reality is that ham radio in the United States is growing once again.

First, the General and Extra class have increased substantially since the 13 and 20 word per minute Morse code exams were eliminated April 15th of 2000. In fact, the number of people holding these licenses has increased by well over 25,000 for each license class. And that's great news for ham radio equipment suppliers since they rely on higher dollar high frequency transceiver sales for much of their yearly income.

The Technician class is holding its own, too. The number of new Tech license holders is keeping pace with the number of hams either upgrading or dropping out of amateur radio. The net change is close to zero.

Only the Novice and Advanced classes are seeing significant drops in numbers. No new Novice or Advanced class tickets have been issued since April, 2000. And while existing licenses can be modified and renewed, it appears as if that's just not happening among Novices. They appear to be fading away, and quickly -- there were 65-thousand Novices in 1997 -- only about 37-thousand, though, today.

The bottom line is that for the last 12 months ham radio has seen an average of 16-hundred brand new ham licenses issued each month. That's an improvement of 160 a month over the previous year. And that improvement is very good news for ham radio.

As to the state with the largest number of hams? It's still California which can now claim being home to more than one seventh of all the nations hams. Latest figures show there are more than 100,000 hams now living in California.

The state with the fewest hams? North Dakota -- only 1575 hams there.

Reporting from the Amateur Radio Newsline's South-East Bureau in Birmingham, Alabama, I'm David Black, KB4KCH.
--

The bottom line is this. Restructuring seems to be doing the job it was intended to do. Its now up to those in the hobby to work to swell its ranks even more. (W5YI)

**

RESTRUCTURING: 5000TH UK FOUNDATION LICENSE CELEBRATED

The United States is not the only place where ham radio is growing. In the United Kingdom Andrew Finch, M3FMA, is only 11 years old and suffers from dyslexia. But nothing was going to keep the young scout from becoming a ham. And now he is the 5000th person to obtain that nations new and very popular Foundation Class license. Jeramy Boot, G4NJH, has more:

--
The Radiocommunications Agency has been so pleased with the numbers taking up the license, that it decided to commemorate the 5000th amateur with a special award. Alan Betts of the Agency's Amateur Radio section, commented: "The radio amateur community was around 50,000 strong before the new license was introduced, and so this level of interest is very welcome".

He also added "The License has proved very popular with young people and amateur radio is very much an up-and-coming hobby for them".

The presentation of Andrew's prize took place at a ceremony held at the Radiocommunications Agency's monitoring station in Baldock, Hertfordshire on Tuesday the 22nd of October. Andrew was also presented with membership of the Radio Society of Great Britain by its President, Bob Whelan, G3PJT, who also presented a host of radio amateur goodies and books.

Andrew's day was not over after the ceremony - he was given a tour of the Radiocommunications Agency monitoring station at Baldock. 'Heartbeat FM' from Hertfordshire then conducted an interview with him before he was whisked off for another interview with 'Dream FM' of Chelmsford.

Jeramy Boot, G4NJH.
--

Andrew had told his parents that he was going to begin saving his pocket money to buy a radio. He won’t have to do that. Among the gifts he received for becoming the 5000th Foundation license holder was a brand new F-T 817 transceiver donated by Yaesu. The Foundation License has only been available to U-K residents since earlier this year. (GB2RS)

**

EMERGING TECHNOLOGY: HAM RADIO INVITED TO DIGI RADIO EXPERIMENT

Ham radio has been asked to be a part of an important digital radio experiment. Bill Pasternak, WA6ITF, has the details:

--
Digital Radio Mondiale, or DRM, is a project aimed to revitalize the short-wave, medium-wave and long-wave AM radio broadcast bands. This, by using digital signals to provide near-FM quality.

Radio amateurs and serious broadcast-band listeners have been invited to become part of the DRM Software Radio Project. They may also be among the first to access the initial DRM programs when test transmissions begin next month.

James Briggs is the DRM Projects Co-ordinator with Merlin Communications in Dorset England. Biggs says that the project relies on adding an extra down-converter board to existing receivers and then using software to decode the signal via a PC soundcard.

The interface is simple and the sound -- hopefully -- will be superb.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.
--

To find out how you can play a part in the DRM experiment take your web browser to www.drmrx.org (Media Network)

**

RADIO LAW: CONGRESS AND CCR'S

Some good news and some bad news in the drive by the ARRL to get Congress to ban deed restrictions on hams who want to put up towers and antennas. The good news is that several more members of both houses have signed on as co-sponsors in recent weeks. The bad news is that no action took place on the issue before Congress adjourned for elections and there's little chance of any action once it returns to close out the year. The bottom line: The ARRL says that it will try again when Congress reconvenes in January of 2003. (ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K5TYR Repeater serving Tyler Texas.

(5 sec pause here)

**

ENFORCEMENT: FCC PROBES JAMMING OF THE HURRICANE WATCH NET

The FCC is asking a Morrison Colorado ham to explain why he allegedly interfered with an onging hurricane emergency net. The FCC's Daryl Duckworth, NN0W, tells us about the case:

--
Duckworth: “The Enforcement Bureau opened an inquiry into allegations that Merle W. Garbe, W0SBE, of Morrison Colorado interfered with the Hurricane Watch Net on 14.325 MHz on October 3rd of 2002 during its Hurricane Isadore operation.”
--

The FCC letter to Garbe notes that the Hurricane Watch Net is operated to assist the National Hurricane Center in Miami, other government agencies and people in a target area of a hurricane system. The letter goes on to note that the agency considers this service to be one of the most important purposes of the Amateur Radio Service .

**

ENFORCEMENT: NO RADIO CALL-IN SHOW PERMITTED ON 75 METERS

The FCC is asking a California ham why he allegedly ran a radio call in show on 3.830 MHz and requested shortwave listeners to participate. The regulatory agency alleges that James C. Watkins, KI6GU, of Burbank ran such an operation last August 16th and 24th and used a reverse autoptach system to facilitate the call-ins.

Along with the FCC inquiry Watkins was furnished 9 pages of material relating to the complaints against him. He was given the customary 30 days from the date of the Commission inquiry to respond. (FCC)

**

ENFORCEMENT: BIG FINE AGAINST FLORIDA PIRATE BROADCASTER

The FCC has levied a $10,000 fine against a Florida man who has allegedly been operating a radio transmitter without a license. Richard Munoz of Naples was issued the forfeiture notice for operation of a radio station on 105.1 MHz without Commission authorization. Amateur Radio Newsline’s Bill Burnett, KT4SB, is in Miami with the details:

--
The story begins on April 20 if this year. This, when agents from the Tampa Office investigate a complaint alleging that an unlicensed radio station was transmitting on frequency 105.1 MHz in the Naples, Florida area.

A search of Commission records shows that there was no FM radio station licensed on 105.1 MHz in Naples. So, using a mobile direction finding vehicle, the agents trace the station to the Tree of Life Church in Naples.

The agents then interview several witnesses at the church who identify Richard Muñoz as the operator of the radio station transmitting on 105.1 MHz. The witnesses also provide the agents a business card identifying Richard Muñoz as the pastor of a Spanish-language ministry called Mission Possible Ministries. A brochure advertises a radio program called “Mission Possible" on 105.1 MHz.

The agents interview Muñoz. He admits that his ministry owns the radio station equipment and is operating it.

The agents ask Muñoz if he had a license for the station. He replies that a friend has submitted an application to the FCC. Also that the friend has advised him that he could operate the station while the paperwork was being processed.

The agents advise Muñoz that he cannot operate the station without a license and directed him to terminate the unlicensed operation. Muñoz requested additional time to notify his listeners that the station had to go off the air. The agents again tell Muñoz that he could not operate the station without a license and order him to take the station off the air. Muñoz directs another person to turn off the transmitter.

But the story does not end there. On April 30th the FCC'sTampa Office receives another complaint alleging that an unlicensed FM station is again operating on 105.1 MHz in Naples. Also that it is causing interference to the reception of an FM broadcast station licensed to operate in that area.
On May 14th, agents again trace the station to the Tree of Life Church and on May 17th the Tampa Office issued a warning letter to Andrew dealing, the head pastor of the Tree of Life Church. The warning letter advises DeLong that operation of a radio station without a license violates Section 301 of the Act, ordered him to cease operation of the unlicensed station transmitting on 105.1 MHz immediately.
Then, on May 24, 2002, the Tampa Office receives a letter from Pastor DeLong. In the letter, DeLong states that Richard Muñoz is the operator of the radio station transmitting on 105.1 MHz. Also that that Muñoz leases space for the radio station from the Tree of Life Church, and that the Tree of Life Church had no control over the operations of the radio station.
Based on the facts before it, On June 5th the Tampa Office issues an Notice of Apparant Liability for a $10,000 forfeiture to Richard Muñoz for operating a radio station without a license in willful and repeated violation of Section 301 of the Act. In his response to the notice, Muñoz admits that he operated the unlicensed station on 105.1 MHz, but requests cancellation of the forfeiture. He tells the FCC that his church, Mission Possible Ministries, had agreed to purchase 50% of the radio station for $15,000 from Daniel Morisma approximately eight months earlier. According to the reports, Muñoz maintains that Morisma told him that there was an application for the radio station on file at the FCC and that the station could go on the air while they were waiting for the application to be processed.
According to Muñoz, Morisma told him that the station should go back on the air because the FCC would not visit again, and that if the FCC did visit again, it would issue a second warning before proceeding with any penalties. Muñoz asserts that the station had been using the time between the FCC’s first and second visit to explain to listeners that they would soon be off the air because they had been lied to and scammed and that the station was a week away from dismantling when the FCC visited the station the second time.
But the FCC sees it another way. In its order the FCC says that it is unfortunate that Muñoz may have been duped into believing that there was an application for the radio station on file with the FCC and that he could put the station on the air while the application was being processed.
None-the-less says the FCC, Muñoz clearly knew following the inspection by its agents on April 20th that the station was unlicensed.
The bottom line. The FCC says that under these circumstances, it concludes

that no reduction of the forfeiture on this basis is warranted.
From Miami, I'm Bill Burnetrt, KT4SB, reporting for the Amateur Radio Newsline.
--
Muñoz was given the customary 30 days to pay the fine. If he fails to do so the FCC indicates that other punitive action may be taken.

**

WITH THE SCOUTS: JOTA FOLLOW-UP

ARRL Educational Programs Coordinator, Jean Wolfgang, WB3IOS, reports that so far over 125 scouting Jamoboree on the Air or JOTA survey have been received for this years event. The reports show over 9079 Scouts, 2855 visitors, and 657 hams participated. This is a substantial improvement over last year when only 65 surveys were returned!

But says Wolfgang, there are several state we have not heard from. They are Delaware, Hawaii, Idaho, Mississippi, Montana, Nebraska, North Dakota, South Dakota, Utah, Vermont, and Wyoming.

If you participated in JOTA 2002 and have not yet completed the ARRL survey please have a representative of your JOTA event complete and submit the form as soon as possible. You will find it on the web at http://www.arrl.org/FandES/ead/jotalog. (WB3IOS)

HAM RADIO BUSINESS: HAS HAMVENTION 2003 GOT A DEAL FOR YOU

The planners of Hamvention 2003 say -- have they got a deal for you! The Hamvention, in cooperation with the Dayton Montgomery Convention and Visitors Bureau has put together a special V-I-P package. It will do to five of the first 500 who purchase a preregistration ticket before Novermber 15th.

The five lucky winners will be chosen in a randon drawing in early December. They will receive two nights of hotel accommodations during Hamvention, dinner for two at Jay’s Restaurant, a V-I-P badge, a special souvenir package and the most important prize of all. An on-site V-I-P parking pass for the show! Thats right -- parking almost at the Hara Arena front door.

More information on this special Hamvention 2003 promotion is available by e-mail to tickets@hamvention.org. You can also phone during business hours Eastern time to area code 937-276-6930. (Dayton Hamvention)

**

HAM RADIO BUSINESS: WORLDRADIO EDITOR DEPARTS FOR CAREER IN LAW ENFORCEMENT

One ham who may not be at Hamvention 2003 is Worldradio Magazine editor Rick McCusker, WF6O. This is because McCusker has announced that he is leaving the post in a major career change.

Accordong to McCusker, he has been in training for some time to become a peace officer. He has also been working as a Reserve Depuity Sheriff in his spare time. Now, he has accepted a full time position with the Sacramento California County Sheriff’s Department.

Duruing his tenure at Worldradio, McCusker completely redesigned and modernized the magazine’s look. He took most columns by-monthly permitting the addition of new writers representing emerging technologies in the hobby. His legacy is a well respected publication with a steadilly growing reader base.

McCusker’s last day at Worldradio will be on Wednesday November 13th. At airtime no replacement editor has been named. (ARNewsline™)

**

THE CHANGING OF THE GUARD: KL7Y LOST IN MOTORCYCLE ACCIDENT

Some sad news. Word that famed contest operator Daniel Robbins, KL7Y, of Wassilia Alaska has died in a motorcycle accident while in Hawaii. According to the Honolulu Star Bulletin, the 54 year old Robbins died Thursday October 31st after he lost control of a motorcycle while riding in Kona and drove into a lava field. The Fire Department said that Robbins, who was not wearing a helmet, suffered head and other injuries.

KL7Y was a friend to many inside and outside of the world of ham radio contest operations. He had just completed operating the CQ World Wide SSB contest from KH7R a few days before the accident that took his life. A memorial guest list for his friends to pay their respects has been set up on line at www.contesting.com. (K7JA, contesting.com)

**

ON THE AIR: THE MIGHTY MO CELEBRATES VETERANS DAY

The “Mighty Mo” is coming to the ham radio airwaves for a very special event. Bob Maguire, KA2WXU, reports over the Internet that on November 9, 10, and 11 the Battleship Missouri Amateur Radio Club will be on the air each day from 17:00 to 04:00 U-T-C on 14.263, 21.363 and 28.363MHZ, in honor of Veteran's Day weekend. There is no special event QSL card for Veteran's Day event but if you Q-S-L via KH6BB you will receive a regular Mighty Mo QSL in return. More information is on the web at www.kh6bb.org. (KA2WXU)

**

ON THE AIR: UARC CELEBRATES 75TH ANNIVERSARY

The Utah amateur Radio Club will celebrate its 75th anniversary with an on-the-air event beginning Saturday November 9th and continuing through November 10th. Operation will be on most high frequency bands with emphasis on 20 meter SSB. The call sign to listen for is W7SP. For a special commemorative card, QSL as directed on the air. (N7HVF)

**

INTERNATIONAL – INDIA: PIRATES PERSIST

The president of the Amateur Radio Society of India, reports a significant number of pirate operations using call signs VU4A, VU7A and similar other call signs continues. VU2SDN says that a blanket ban exists on operations from Andaman, Nicobar and Lakshadweep islands, and that VU4 and VU7-prefix call signs have not being assigned for 10 years. The only exception was the brief 1993 VU2JPS operation from the Andaman Islands. Quoted in the ARRL Letter, VU2SDN says that call signs that begin with VU2 followed by two or three letters or with VU3 followed by three letters are the only valid call signs for India. (ARRL)

**

INTERNATIONAL – USSR: A WALL OF SOUND

Radio Liberty's broadcasts to the Union of Soviet Socialist Republics were the target of Soviet noise jamming for several decades. But Media Network reveals that the Russian operators actually left frequencies undisturbed so their friends could hear the programs. Now, you can too with a 30 second audio sample of what jamming sounded like for those of you too young to remember. Its on the Radio Netherlannds website. The URL is http://www.rnw.nl/realradio/features/html/jamming021018.html (Media Network)

**

DX

In D-X, a surprise U-S to Japan long path opening surprised many South-West region hams the morning of October 31st. At about 15:45 UTC, D44TD was worked as far west as Arizona. while N6XQ was reported to be 599+ into JA-land, Unfortunately for many U-S hams the surprise opening took place while they were away at work and preceeded an X-class flare a bit later in the day. (K7JA)

**

THAT FINAL ITEM: SOLVING AN AGE OLD QUESTION

For nearly a century, mathematicians have been stumped by one of the math world's most difficult problems. This is a conjecture by French scientist Henri Poincare about the properties of three-dimensional space. And now, it appears as id a British math whiz claims to have solved the problem. Amateur Radio Newslines Henry Feinberg, K2SSQ, has the puzzeling story:

--
Jules Henri Poincare was dubbed by E.T. Bell as the "Last Universalist. A man a who was at ease in all branches of mathematics.

Poincare was also a 19th century professor of astronomy who made fundamental contributions regarding the motions of the planets. He went on to found the field of topology, a branch of geometry, and even competed with Albert Einstein in the study of relativity.

Before Poincare, mathematicians fully understood two-dimensional space, such as the Earth's surface, and could list all the possible shapes of two-dimensional surfaces and use mathematical calculations to distinguish between them. But The math mystery Poincare raised regarded the properties of three-dimensional space. His question, or conjecture, was whether the two-dimensional calculations could be easily modified to answer similar questions about three-dimensional spaces.

He was pretty sure the answer was yes but couldn't prove it mathematically. Nearly 100 years later, math whizzes remain stuck, except for one. His name is Martin Dunwoody.

Dunwoody is described as a British mathematics expert. His answer is barely six pages long and only an outline. And as you might expect, Dunwoody's solution - complete with formulas and diagrams - has been praised and challenged in England.

No, we will not try to explain all the math here. What is interesting is the reaction of the scientific community. Professor Ian Stewart of the University of Warwick, one of Britain's most respected mathematicians calls it the first good shot at this problem in years,. But Colin Rourke, another University of Warwick mathematician, disagreed. Rourke says that when he raised a problem in the solution, Dunwoody admitted on his Web site that it could be difficult to overcome.

Once the math community has accepted the solution, the Clay Mathematics Institute in Cambridge, Mass., must conduct its own review. Only if that proves successful will Dunwoody be rewarded. And if the reaction of the British math professors is any indication, this conrriversy could rage on in math circles for years.

Adding it all up for the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.
--

Even if Dunwoody continues to refine his answer and eventually is proven correct, it could be a long time before it's official. First, he must get it published in a mathematics journal, then undergo a two-year waiting period of international review. (Science Today)

Or if thousands and thousands of amateur radio operators worldwide spend
part of their time, much of their time or just a little of their time,
the "stick poking" charge is valid.

> Unfortunately, the "expertise" self-description of use of morse code
> as the paramount method of communication is a label applied by
> only the PCTA regulars in this chatroom. It is virtual, not real.

Only a couple of regulars here consider morse use to be "paramount".
Many others use a variety of modes available to them. At least two
posters in the newsgroup don't have any modes at all available to them
on the ham bands.

> Those who feel "injured" or even "outraged" by a demonstrated non-

No kidding, Len? You're a regular fountain of information.

> That, by itself, is not a reason for
> the continued existance of the code test...or that "all" radio amateurs
> "enjoy their hobby."

Good thing, too. That isn't the sole reason for the existence of a
morse test.

> It is a misuse of logic to equate "interest" with morse code skill or as
> some de facto "affirmation of devotion to standards/tradition" to be
> demonstrated. Morse code testing is only a legal requirement to get

So you're telling us that we can be HF licensed hams or commercial ops?
Great news!

> The false charges of "hate" or "intolerance" leveled against those who

I've never leveled charges of hate or intolerance at you, Len. You must
be making this stuff up as you go along. Can you provide one of my
statements to that effect since you say they are in public view?

> >> I am not a "Ham".
> >
> > Now there is a real surprise!
>
> The label of "ham" originally came from professional ratiotelegraphers
> regarding amateurs. It was a derogatory term used by pros.

It is not known for certain how the term came to be used. We have only
several theories.

> Those radio amateurs who remain steadfast in living a hobby lifestyle
> of yesteryear generally express antipathy towards radio professionals.

Your latest straw man? I don't know any radio amateurs who live a hobby
lifestyle of yesteryear and I know hundred and hundreds of hams. I
don't know any of them who exhibit antipathy toward radio
professionals. Maybe this is a thing reserved for you alone.

> It should be rather obvious that "ham" is a contraction of the word
> "amateur" sufficient that it does not contain emotional baggage

> referring to an amateur status. Radio amateurs often consider
> themselves "professional" in their amateur radio activities just by
> virtue of tenure and activity.

I don't know any radio amateurs who believe themselves to be
professional radio amateurs by virtue of anything. You ARE making this
stuff up, aren't you?

> Unless they derive income from such
> amateur radio activities, they are not, legally, professionals.

No kidding?

> >> I am not a cult follower.
> >
> > But you must have enough free time to constantly post in a group in

>
> Again, false charges. Several of them.
>
> "Interest" does not require absolute belief-obeyance of standards and
> practices as demanded by a minority of amateur radio licensees or
> the largest US amateur radio national membership organization.

Yeah, there must be loads of guys interested up to the point where they
actually have to meet the licensing requirements for becoming a radio
amateur.

> Strict, near absolute adherence to outdated standards and practices
> in a hobby activity is seen by many as a "cult following."

Straw man number two? Which radio amateurs adhere to the outdated
standards and practices? Who sees such as a "cult following"?

> Especially
> so when such cult members demand keeping regulations carrying
> the code test as a pass-fail test element...simply because they
> personally chose to take such a test.

Izzat why radio amateurs want to keep the morse test around--because
they chose to take the morse test? This might be straw man number
three. Sorry, you can't call 'em "cult members". You haven't been able
to prop up an earlier straw man.

> Those who demand to keep
> the standards and practices of their youth for all those yet to come
> have not demonstrated any viable reason for such regulation retention
> other than they did it, therefore others must do so also. That is a
> rather obvious indicator of a "cult following."

Not everyone became a radio amateur in his youth. Numerous reasons have
been provided other than those you've provided but you have chosen to
reject them.

That makes them no less valid. I think you might have joined one of
those anti-morse cults, Leonardo.

> "Constantly" using "free time" to post opposing opinions is invalid.
> That is merely emotionally-loaded phrasing based on personal
> perceptions...an effort to heckle another of opposing opinion and to
> self-righteously claim their way is "the only way." It isn't the only

Kim:

I've recently turned down two offers for HR positions -- one in NY and
another in Indianapolis. Neither pays as well as my present job, and
would require me to relocate at my expense -- in the case of NY, to a
state where I don't have any wish to live.

>> Well, Larry. Question is, what makes it so OK for you to "just stay"
>where
>> you are even though you could be more;

Could be "more" what, Kim? More dissatisfied with my job? More in
debt? More likely to have to dig my car out of a snowbank every morning
for four months of the year?

>when it's not OK for people to
>choose
>> what of amateur radio they will get involved with?

I don't recall ever making any such statement, Kim. Provide the usual
quotes. If not, you're lying, as usual.

>>What makes you so sure
>> we don't know "everything about your abilities as a capable and effective"
>> human being when you've chosen to go just so far--even though you profess

Kim, while I was in the Air Force, I did my own share of whining -- but
because I was already surrounded by whiners, there was no way to be
heard above the din! One of our favorite jokes in the AF was "What is the
difference between a pilot like a jet engine? Because when the plane lands,
the jet engine stops whining!"

>> I think we're getting to know more of Larry than most of us would really
>> like to... I'd like to see that answer, Larry.

>> > > your are inferior to those who do.

I'm not sure who originally posted the above, however, here's my reply.

It is possible that if you don't use the Morse Code, you can be a "real ham"
and not be inferior to those who do. However, it's not very likely.

>> > > Larry seems to think because of
>> > > his code skills he is some kind of superior ham above everyone
>> > > else.

No, just superior to those hams who, for whatever reasons, cannot be
bothered to learn the code at a useful proficiency level. I have clearly
superior communications capabilities over them -- without regard to
any technical skill they claim to have (but usually don't).

>> > No, just more qualified as a ham than any ham who can't understand
>>> that an additional well-adapted, very efficient mode is potentially a
>>>valuable asset to the ARS, and not useless just because it's "old".

Precisely. Single sideband and all other voice modes are "old," but they're
never made an issue of with regard to their technical relevance. Why
is that?

>> No, it's pretty much that Larry only has ham radio to make him "*feel*"
>> [emphasis on feel] superior to others. He isn't. Let's use one of the

What "rude", Brian?

You incessantly insist on demonstrating a complete lack of awareness of certain operating and practice matters, then get indignant when you get "called" on it.

Sorry you think that's "rude", but if YOU insist on taking a dump on your own shoes, please forgive me for laughing at you.

You DO make it SOOOOOOOO easy.

I think thats a Good Idea. With all the good FM Commercial units available with 50 to 100 Watts output, those Freqs could be put to good use for Truckers and CBplussers. Most of the Radios can be easily set on any Freq. And of course its Illegal to push the PTT button on the Mic, but these Commercial units have great Receivers.

Brian:

There are no more Real Ham(tm) licenses. Only dumbed-down, slow-code,
fake Ham Wannabe licenses. The last Real Ham(tm) (General or above)
was licensed on April 14, 2000.

>I didn't see you're call under the CW contacts by K0HB. Whatsaaa
>matter?

You didn't see mine, or a lot of other Real Ham(tm) calls, either.
Point???

Ya just asked me in another post to provide you with real examples, Larry.
Well, though it will be far above your intelligence to comprehend, the above
is quite a typical example. So, I'll ask the question again: then why don't
you apply yourself in your career...never mind the excuses of where you do
or don't want to live, etc.? *WHY* is it OK for you accept limitations you
have on yourself, but it's not OK for someone--a ham radio operator in this
case--to decide that they don't wish to expend the time to learn CW at a
"useful proficiency level."

Go ahead, let's see you shooting yourself in the foot--yet again.

I can say without a doubt that as the R.A.C.E.S. Officer for the
Orange County (Indiana) Emergency Management Agency.
If there was a disaster here, and I needed a good CW operator,
I would jump at the chance to have Larry volunteer his time.
When you have a need for people to do a job in an emergency,
you don't pick and choose them by their personality, you pick
them for two reasons only, their ABILITY and their
AVAILABILITY!

540. VHF R/C model control in Canada?

Hello!

I was wondering, I read that here in Canada it is permitted to control r/c models on frequencies from 30MHz and up. Would that mean I could use the 2 meter band to control models or are there anymore restrictions?

Thanks,
Jean-Fran&#65533;ois

Most humans don't have any aptitude for on-off coding patterns
representing letters, numbers, or punctuation. If they had such
an aptitude, the armed forces of the US would not have had such
tests for military recruits for over two decades.

Most humans DO have a natural ability to perceive human sounds
and images, therefore they evolved the many written and spoken
languages of the world. Most humans DO have an aptitude for
abstract thought wherein they can communicate thoughts and
ideas and participate in knowledge sharing through human
languages.

Laws of a land are written in the language of that land. In the
specific case of radio regulatory activities, the US FCC has
written tests for certain radio operator licenses. Answers to
such written tests form the basis for the agency to grant licenses.
in regard to knowledge of regulations, radio-electronics theory,
and common practices. If someone has a "handicap" whereby
they cannot convey knowledge for a test, it is unreasonable to
grant them responsibility inherent in a license on the basis of that
"handicap."

>>> I'd say the "pool of Morse operators" thing ended with the maritime
>>> changes. Not before.
>>
>>Works for me.
>
>End of 1997.

The end of the "pool need" happened, de facto, earlier than that.
GMDSS was planned largely BY the maritime community.
Maritime radio is a very small part of the overall international radio
services and activities.

>>So just which reason that wasn't accepted by the FCC
>>should not have been rejected?
>
>Here are some (just my opinion):
>
>1) License tests should be about the things the license allows the licensee to
>do, and that are commonly done by licensees. Lots of Morse code on the HF ham
>bands. And there's no reasonable way to test Morse skill on a written test.

By the same token, there's "no reasonable way" to test any other
mode/modulation on a written test. A written language cannot
effectively convey skill/ability with a spoken language, or typing (as
in data/teleprinter communications), or any other allocated mode or
modulation.

The FCC allows each and every US amateur radio licensee to use
any allocated mode on any allocated band. They do not mandate
a specific one to be used in lieu of any other mode/modulation. The
FCC thus allows ANY allocated mode/modulation.

Given the rules/regulations of optional choice, it is unreasonable to
suppost a specific mode test such as for International Morse Code
testing at any rate.

>2) Morse has a symbiotic relationship with simple radio equipment. Very useful
>for those who want to build and learn about basic radio.

"Symbiotic relationship?!?" Nonsense, gobbledegook babble.

There is NO "symbiote" living within any radio, simple or complex.
A radio is simply a bit of electronics hardware that operates on
principles of known physics. Any "magic" or "biological" aspects

of or with radio are purely subjective, emotional thoughts.

"Usefulness in building and learning radio" is not a regulatory item
or requirement in any Part of Title 47 CFR. The Communications
Act has not defined the FCC as any sort of "school" for learning
radio arts nor is it any academic achievement body whereby a
radio license is a certificate of learning.

>3) Hams using Morse are overwhelmingly well-behaved on the air while using the
>mode. Check the FCC enforcement actions involving licensed hams - practically
>all of them are for voice operation.

Morse code mode at a rate of 5 to 20 or even to 40 WPM does not
lend itself well to emotionally-laden words/phrases of inappropriate
behavior. It carries NO inflections, tonalities, or common human
clues available in common human visual-audible communications.
On-off monotonic codings are ill-suited to either insults or
expressions of any emotion.

>4) Morse is spectrum- and power-efficient, allowing hams to get the most out
of
>their HF bands without having to invest in data modes.

Yes and no. In terms of "simple" radio hardware, circuitry possible
with vacuum tube active devices and with electromechanical "data"
machinery, on-off codings ARE simpler. However, the "spectrum
efficiency" is related mainly to receivers employing narrowband
filters, those filters both complex and costly. On-off codings applied
to on-off keyed transmitters can result in rather broad bandwidths
without attention to turn-on and turn-off times of the carrier.

US radio amateurs are all allocated a number of bands ABOVE HF
where a great number of modes and modulations are allowed. As
many above HF as those at HF or high MF. By comparison, the
number of modes/modulations in HF or high MF is less than those
above HF.

As to ACTUAL "spectral efficiency," simple on-off codings are NOT
the most efficient. Information Theory has proven that since the
Shannon Laws were formulated back in 1947.

>Of course the FCC disagrees, and it's FCC opinion that makes the rules.

The FCC is not any sort of academic ruling body. It is simply a
regulatory agency tasked with regulating all US civil radio. The
FCC makes decisions on radio regulatory matters on the basis
of US citizens' (and some special interest groups) submitted
opinions. ALL US citizens, it should be noted.

>Do we need more proof of FCC fallibility? IOW, just because FCC believes it
>doesn't make it right, or good for the ARS. Just legal.

Do we need more proof of long-time radio amateurs' fallibility?
Just because some long-time radio amateurs have established

their own particular personal preferrences for "goodness" in US
amateur radio does not make them "right" for all others.

>>Many hams USE spanish, and other languages. There's
>>no reason or rational to require knowledge of Spanish.
>
>How many US hams use Spanish or other languages on the air, compared to how
>many use Morse on the air? The number is very small.

Irrelevant question-answer. It would be as meaningless to ask the
question in any Latin American country, about their own civil radio
regulatory agencies, as to whether they require a knowledge of
a primary language other than Spanish (Portuguese for Brazil). :-)

The "primary mode" on HF amateur bands is voice. More
communications is conveyed by voice than by on-off morse codings.

>>> Here's another point:
>>>
>>> One thing bedeviling the FCC is the continued existence of freebanders
>>> and cbers running excessive power and violating the rules. FCC would
>>> be much happier if all those folks got ham licenses, so FCC has an
>>> interest in making ham licenses easy to get. Thus the changes in both
>>> code and written test requirements over the past 20 years or so.
>>
>>I totally disagree that the FCC had any such expectation
>>or hope on that basis.
>
>Your opinion noted, Bill, but please consider the following possibility:
>
>Suppose, just suppose, my theory is correct, and FCC wants to reduce ham
>license requirements as much as possible in order to counteract the
>freebander/illegal cber problems. Do you think FCC would tell any of us about
>it? Of course not!

Speculating on speculations is a nonsense exercise.

If "illegal operators" were "bedeviling" the FCC, the FCC would have
acted long before this. Long-time radio amateurs seem to be the
ones "bedeviled" about the "hoardes of cbers running high power."
Long-time radio amateurs of 1958 were sorely vexed (some out-
right furious) that the FCC would dare to issue a license to anyone
on HF without a "legal test!" :-) The situation has continued with
new generations of pedestal-mounted "legal amateurs" rabidly
decrying these infidels of their territory on HF. Ho-hum.

The FCC is merely in the task of regulating ALL of US civil radio.
They are not tasked with promoting or demoting US amateur radio
nor are they there to say which is "good" and which is "bad" except
as defined in law. Since 1958 the FCC removed the need for written-
paper licenses on CB and increased the number of channels from 23
to 40. The FCC also created a new 72 MHz band for model R/C use

to expand the original Class C CB telecommand allocations.

As to the FCC "not telling us all" about anything, the contrary seems evident to anyone who has bothered to read their Reports and Orders or their Notices of Proposed Rulemaking on any radio service. They clearly indicate what their "reasons" are and how they come to certain decisions. If those certain decisions are not to personal preferrences, that is no cause to claim "conspiracy."

Last night again "Orange Blossom" and one
other station (name only used ?) checked
in 3.860 at a little after 8:00 PM
without the benefit of a proper FCC
issued Amateur Station callsign.
I guess it's OK 4 anyone with a "political adjenda"
to transmit without a ham licence and the NCS on
this freq will check them righ it without any contest
as to their validity to use a ham transmitter...
Stick a fork in in? ham radio's traditional quality is going bye-bye?
Note also that 3.850 USB (+/1 10kc) seems to being used by
shrimp boaters along the Miss/La Gulf Coast also for chit-chat
w/profanity from midnite onward at times too..

Of course not numbnuts. Note that my proposed qso has a precedent in RRAP, the night an improbable group of both NCTA and PCTA types got on 7.037 and had a ball. You couldn't get into it then and you still can't.

OK, you can't copy cw, fine, neither can a lotta people. So I invite you to pick the mode for a bit of a repeat of that memoable event and you still can't cut it.

Because you're a WEENIE, radio and otherwise! The prototype RRAP WEENIE!

You better hang around here 'cause it's obviously as close as you can come to ham radio.

Source record: 54785

Well, this sounds like an amateur griping, but if you check out MURS open, you'll find modded rigs being offered for sale (only 5 watts on MURS channels so far, but the direction is there). Also advice on using ham rigs on MURS and FRS. The usual "don't quote rules to me" along with the no harm done excuses. Once higher power stations start getting aboard (this shouldn't happen real soon, only once those channels start getting filled up) folks will then start running 'uppers' and 'lowers'. You'll then find them in the business only band along with (possibly, but there is a fair frequency jump) 2 meters. Stewart mentioned using 12 dBi gain antennas at both ends of a circuit along with 2 watt radios and stated that communications should be possible over 60 miles. This may well be true (how no one wanted to hear about scatter), but it would be cheaper to modify a couple of 50 watt 2 meter rigs and use a much cheaper 6 dBi vertical mounted up fairly well as opposed to using an expensive antenna, tower, and rotator. Whether this happens (quite likely) or not, the problem is that everyone is planning their own private wide-range communications system. Totally inconsistent with the traditional use of these frequencies. My guess as far as not wanting to get amateur licenses, that it isn't the amateurs nor the tests - my guess (and it is a personal opinion) is that these folks do NOT want to have to give a valid callsign as it makes them much more traceable.

We're a diverse crowd of individualists, each with strongly held ideas which often conflict with other strongly held ideas, and we bicker and fight here like a crowd of step-siblings who fight each other, sometimes I think just for the pleasure of bickering. Odds are pretty good that underneath it all we have a lot more in common than we really want to acknowledge.

We're all (well, almost all) licensed hams, and most of us have passed at least a 5WPM Morse test.

I propose a Rrap net, each Wednesday evening at 0300UTC (10 PM EST, 9 PM CST, 8 PM MST, 7 PM PST) on 28.350, a QRG available to everyone who has passed the 5WPM Morse test. If there's other traffic on that freq, we can just move up to the first clear spot.

Be there, or be square.

So only those that favor Morse code can participate in a policy net? This is very biased and unfair!

Both no coders and coders should be included.

That's right - keep spamming this newgroup with your crap (instead of "rec.radio.info" where it's supposed to go - per the "rec.radio" charter). [And they can't even get it correct - look at the character set problems above!]

Still paying yourself that salary, ITF? That's the only, real explanation of why this could cost you $1,000.00/month, while the competing service from Albany, NY ("TWIAR") can do it with $100.00/month.

Take it up with the FCC.

In any case, Technician licensees and unlicensed persons are welcome to participate as 3rd party participants. Go to QRZ.COM and do a search on your ZIP code and find an HF licensee who will host you.

When the Powers-That-Be decided to eliminate the CB license w/address, and later eliminated the station location from the amateur license records, some of us in the field enforcement business moaned amd groaned that this would make it harder to enforce compliance.

Cooler heads pointed out that we would have to DF the station for positive identification anyhow, and the use of a call sign or the presence of an address in a data base did not make the DF task any easier or more accurate.

In an enforcement action relying on the call sign alone without a DF, the licensee could easily claim the Dude Defense - "some other dude was using my call sign". Whether it would hold up or not is another story. Judges are not that stupid, and an authenticated recording presented as evidence usually cooks the violator's goose.

The main advantage of holding the license (or complying with the rules for blanket authorization as in CB, MURS, and FRS) is to avoid the substantial monetary penalties for unauthorized operation and/or the unannounced visit from the U S Marshal with a Search and Seizure Warrant if the FCC gets ticked off enough.

Sorry, Larry. From my perspective, you are quite wrong. I have just as real a ham license as yours. That you choose to think of it differently is one of Larry's World concepts. So, you can choose to think however you wish; though you have no impact or decision-making power on ham radio licensees. Your dogma about "dumbed-down" is just that: dogma. It is unsubstantiated, insupportable, and falls outside the guidelines and rules as set forth by the governmental agency that issues amateur radio licenses.

Dream on, maybe Larry's World will become a reality for you some day.

I did, and still do, have a CB radio. However, by what standards are you juding "them." If one were to label all CB users based upon the nitwits, then wouldn't it stand that all amateur radio operators should be labeled based upon the likes of those frequencies on amateur radio that are so famous, such as those in the 80M segment? Or, based upon how you act here in this newsgroup?

Uh, exactly what HF frequency would you suggest for the non-CW licensed folks? :) However, a huge effort would be to accommodate those who cannot get on HF by providing relay messages into the net from those HF stations who wish to and can hear local stations on non-CW licensed frequencies! heh heh

So? Even in schools, students with learning disabilities don't get a free
pass
on tests. They get extended test times, but they still have to pass the
same
test. We do the same thing for handicaped hams now...e.g. we can
read the test to a candidate who has vision problems.

licensee to
> do, and that are commonly done by licensees. Lots of Morse code on the HF
ham
> bands. And there's no reasonable way to test Morse skill on a written
test.

So if a ham doesn't pass a morse test, maybe we should have
the rules say that ham shouldn't be allowed to operate morse.

> 2) Morse has a symbiotic relationship with simple radio equipment. Very
useful
> for those who want to build and learn about basic radio.

The relationship may be symbiotic forsome...BUT it is in NO way
needed for anyone to actually learn radio basics.

> 3) Hams using Morse are overwhelmingly well-behaved on the air while using
the
> mode. Check the FCC enforcement actions involving licensed hams -
practically
> all of them are for voice operation.

No such proof exists for that statement. The reality is that
it is far easier for the FCC to listen and hear violations when
voice is used vs morse.

> 4) Morse is spectrum- and power-efficient, allowing hams to get the most
out of
> their HF bands without having to invest in data modes.

So? That has been true for years yet hams are free
to NOT use morse at all. Indeed, if this argument had any
merit, then rules/regs should have called for use of morse
rather than voice for most communications.

> Of course the FCC disagrees, and it's FCC opinion that makes the rules.

You nailed it on that point.

> >> FCC gave us incentive licensing, repeater rules
> >> that were stricter than those for commercial services, 27 MHz cb, and

> Do we need more proof of FCC fallibility? IOW, just because FCC believes
it
> doesn't make it right, or good for the ARS. Just legal.

If the FCC is wrong, just how/who makes that determination...and via
what mechanism. The courts are the arbiter of FCC rules/regs if
someone "appeals" FCC rulings, but that is not usually a path that
hams can take for $$$ reasons if nothing else.

> >> One thing many hams I know would like is a strap-on 100-150 W amp for

The point is that no one is "required" to engage in contacts
at all, using any language or mode.

We already have had a similar "net" one evening about 2 years ago. The participants were Cecil Moore, Jim Kelley, Brian Kelley, Dick Carroll, and me. At some time or other over the years on rrap I have disagreed violently on some point with each of these guys, but since the short chats we had that evening I find it a lot easier to understand their views (even if we still violently disagree on some points).

You can obviously opt out or even eavesdrop at your receiver and ROTFLYAO, but it will be a loss for all of us.

I have a foggy memory that ARRL VEC offered Spanish language exams in KP4.
(Or maybe it was just a proposal that got shot down....) In any case, I
don't see any prohibition against translation services in FCC rules.

Phil, it was quite a bit different back when I was a novice. My elmer, Russ, W2ZS sk, had a sched with me whilst I visited my grandparents' place at Black Lake, NY. I threw up a 40 meter dipole and checked the frequency. Then I tuned up. Funny, that stupid dipole sure didn't seem to want to load properly (I was using a Heathkit DX-40). Today, of course, I'd stop and find out why the thing didn't want to load; youthful exuberance kept me from being bothered by details. I called for perhaps 15 minutes with nothing heard. Perhaps less than two weeks later I realized why that dipole didn't load. Seems when you have the bandswitch on 20 meters, that dipole becomes a full wave antenna with a high input impedance. The high impedance and low power did not prevent the FCC from hearing it and sending me a warning notice about harmonics. I always check out anything suspicious now ;) Actually, they were pretty nice about the whole thing, but I had to change my shorts the day the notice arrived!

So in other words if Larry was net control of an "emergency" net and
you heard him running that net you would turn your back on helping
because of your conflict with him. Seems to me to be a very petty
reason for not helping out. If you can't put personalities aside long
enough to do a needed job then maybe it's best that you didn't help.

And if Larry turned it into some kind of a CW contest for "real hams"
only, he wouldn't be needed either, but somehow I don't think he would
let his opinions stand in the way of doing the job at hand.

Quite frankly, your characterization of me as a PCTA is amusing. If you want to know what I think of as the "epitome" or "pinnacle" of the ARS is, I think it is homebrewing.

I am amazed at your ability to read between lines to the point of exclusion of the content of the letter.

You seem to like to equate my posts as some sort of attack on no-coders. I can assure you it is not, but I think you are trying to intimidate me into not posting. Why would you do this> Should I not post my opinions here?

You do know that any frequency that will gove coverage to most of the
people here will not be a frequency that non-coded hams have access to?

In your case, the answer is to work with a hf-privelige licensed ham,
since you don't have a license. Then we can talk.

I guess this really is the best you can do. I'm reminded of the Far
Side comic where the boy is pushing against the entrance door to a
school building. A sign on the door says, "PULL." Another sign above
the door says, "School For The Gifted."

Isn't propagation on 10 at 10PM local time dead, even with good sunspot
cycle peak? It's 10PM as I write this in NJ (3:00 zulu) and the Sun set
about 5 hours ago.

To Larry's way of thinking, something that can't survive without a
government mandate is "dumbing down." I prefer to call it welfare support,
but we've had this argument before.

It's interesting; I've met many CBers that are more pleasant than some of the hams I've met. Even prior to the April 2000 license change, CBers were more friendly than the locals on two meters. All of which is passe, now that internet technology has this wonderful thing known as "voice chat rooms."

Interesting info! One problem I can see is that FCC (or someone) would have to certify that the Spanish exams were accurate translations of the approved English Q&A. And I don't know if non-English 605 forms exist.

At any rate, the lack of non-English exams at most VE sessions effectively requires that prospective hams know English well enough to take the test.

I'm sure some ACLU types might get excited about that, but since there are many major languages and hundreds (perhaps thousands) of dialects spoken in the world, I guess I'd think it pretty likely that you are correct. And it doesn't bother me a bit. If I go to Italy or Russia or Mongolia or Mexico or Brazil or Ghana and wish to take an Amateur Radio test, I'll expect to have to be fluent in the mother tongue of that country in order to understand the test material.

Life's a bitch, ain't it!

And If I was able to help, all you'd get out of me is good CW
operation! I wouldn't have time for any of the so-called "personality"
crapola that Kim keeps whining about.

Kim is one of these people who plays judge, jury, and executioner
on people based solely on whether or not they rubber-stamp HER
actions and opinions. Since I have a mind of my own, Kim is
naturally threatened by that, and would do anything in her power
to exclude me from participation in local amateur radio public
service solely on that basis. Since I've had the audacity to
challenge the propriety of her vanity call sign, which I consider to
be demeaning to female hams and inappropriate for a family-oriented
hobby/service such as ours, she's been on the outs with me.
So be it. It's her problem, not mine.

Krell:

Yes, we have, but seem to be unable to understand my POV. I think
that the government has a perfect right and responsibility to regulate
activities which utilize finite public resources, such as the RF spectrum.
I believe the code testing requirements (of the Pre-Restructuring Era)
were valid and essential to ensuring that Amateur Radio operators had
the knowledge and skills necessary to provide reliable backup
communications capability in all potential situations. It's a simple fact
that the Morse Code does provide a solidly reliable communications
platform which offers unique benefits to the ARS. However, it cannot
be exploited unless amateurs learn to use it with a reasonable level
of proficiency. Thus, the former code testing requirements were, IMHO,
essential to preserving the nature of the ARS' emergency communications
potential.

The only thing that was "mandated" by the government was the
"dumbing down" of the ARS -- as requested by a bunch of lazy whiners
who couldn't see the benefit of the Morse code due to not having given
themselves much of a chance to learn it at a useful proficiency level.
Unfortunately, reducing, and/or eventually eliminating, the code testing
requirements doesn't seem to have done much to give the ARS a
shot in the arm now, has it? Our growth is virtually non-existant, and
probably won't even keep up with future losses. In the meantime, we're
no better off from a standpoint of advancing the state-of-the-art in
communications technology. All the promises of the no-coders were,
as usual, empty and self-serving.

Larry,

The thing I find to be most ironic, is that the same issues occuring now are almost the same issues that I have been reading in the early 70's ham mags..... Not much has changed in 30 years I guess...

>
>So?

Point is that trying to quantify "intelligence" with a single number leads to
huge inaccuracies. Also, what appears to be easy to most people is not
easy for everyone, but the tests are unchanged because nobody has
challenged them.

>Even in schools, students with learning disabilities don't get a free
>pass on tests. They get extended test times, but they still have to pass the
>same test.

For many types of test, extending the test time IS changing the test. The SATs
and ACTs are a classic example, because they involve huge numbers of questions.
PE license exam is another one. Part of the test is time efficiency.

Given unlimited time on a test like the SAT, most people will get a higher
score than
when timed.

>We do the same thing for handicaped hams now...e.g. we can
>read the test to a candidate who has vision problems.

But what about the person who has trouble memorizing things like the band edges?

Argument still comes down to this: Much of what is in the writtens is not absolutely
necessary for the legal and competent operation of an amateur station, yet it is required of all applicants, regardless of how difficult they find the material. Back
when ham rigs had to be manually tuned and analog VFOs could not be prevented from
out of band operation, there may have been some justification for lots of memorized data.
Those were days when out-of-band operations due to technical trouble were common,
too. And that out-of-band operation often stepped on another service, too. How common is that sort of thing today

>> >> FCC isn't infallible.

>So if a ham doesn't pass a morse test, maybe we should have
>the rules say that ham shouldn't be allowed to operate morse.

Only if there are Morse-only parts of the bands.
>
>> 2) Morse has a symbiotic relationship with simple radio equipment. Very
>> useful for those who want to build and learn about basic radio.
>
>The relationship may be symbiotic forsome...BUT it is in NO way
>needed for anyone to actually learn radio basics.

Not an absolute need. But in the amateur radio community, it's a definite relationship. Case in point: Some time back on rec.radio.amateur.homebrew, there was a request for designs of HF ham transceivers that could be easily and cheaply homebrewed by raw beginners without much money or skill. How many of them do you think could build an SSB transceiver from scratch as a first project?
>
>> 3) Hams using Morse are overwhelmingly well-behaved on the air while using
>> the mode. Check the FCC enforcement actions involving licensed hams -
>> practically all of them are for voice operation.
>
>No such proof exists for that statement.

Sure it does. Just look at the enforcement letters.

> The reality is that it is far easier for the FCC to listen and hear
violations when
>voice is used vs morse.

Most FCC enforcement action is complaint-driven. Somebody writes in and
gives specific, usable information.

Here's a challenge to anyone who doubts 3): Spend an equal amount of time
over several evenings to 80 and 75 meters (Part 97 lists them as separate
bands, btw).
Or any HF hamband, adjusting the time of day for best activity and propagation.

Compare the offenses heard on 'phone vs. CW.

Of course such a test requires the ability to understand the Morse.

Note the recounting of unidentified operations ("Orange Blossom") in another
thread here in rrap.

>> 4) Morse is spectrum- and power-efficient, allowing hams to get the most
>>out of their HF bands without having to invest in data modes.
>
>So? That has been true for years yet hams are free
>to NOT use morse at all.
>Indeed, if this argument had any

The test insures that they have at least a basic ability to use it. Or at least
the test used to insure that.
>

Follow that logic to its end, and you'd have no testing at all. Since I'm not
required to operate 6 meters or SSB, why should I have to learn anything
about 6 meters or SSB just to get a license to operate 40 CW?

>> >> Here's another point:
>> >>
>> >> One thing bedeviling the FCC is the continued existence of freebanders

>Conspiracy Theory 101 :-)

Not a consiracy at all, just a policy motivation. And your answer evades the question - do you really think FCC would admit that the above was part of their motivation, if that were true? Particularly knowing the storm of trouble it would unleash?

Gulf Coast shrimpers have used 3850 kHz for years. They
do not have amateur licenses and just ignore hams who ask
them for call signs. Shrimpers also use 7235, 3945, & several
other ham freqs. I've complained on and off over the years,
written letters, etc. All to no avail.

```
10 Meter propagation shuts down long before 10:00PM.
You may be lucky if you get out 5 miles on 10 at this time.
I would suggest a 40 or 75 meter nightime freq instead to get
much wider coverage.
.

It will probably be spotty, but I selected 10M because it is the band we can likely get the most RRAP participation in, given that every license class except for Tech (without Morse) have voice spectrum there.

I listened to the NCDXF/IARU beacon system at 28.200 last night AT 0300Z, and heard the 4U1UN and W6WX nodes down to10W, and the W6WX node down to 1W. (I'm located in Minnesota).

I have heard them working on off the wall freqs all through the specturm.
Upper Side Band. Most hams can't figure out to turn to USB and move the
dial.

"We, the sensible people of the United States, in an attempt to help
everyone
get along, restore some semblance of justice, avoid any more riots,
keep our nation safe, promote positive behavior, and secure the blessings of
debt free liberty to ourselves and our great-great-great-grandchildren,
hereby
try one more time to ordain and establish some common sense guidelines for
the
terminally whiny, guilt ridden, delusional, and other liberal, bedwetters.

We hold these truths to be self-evident: That a whole lot of people are
confused
by the Bill of Rights, and are so dim that they require a Bill of No Rights.

ARTICLE I: You do not have the right to a new car, big screen TV or any
other form of wealth. More power to you if you can legally acquire them, but
no one is guaranteeing anything.

ARTICLE II: You do not have the right to never be offended. This country is
based on freedom, and that means freedom for everyone-not just you! You may
leave the room, turn the channel, express a different opinion, etc., but the
world is full of idiots, and probably always will be.

ARTICLE III: You do not have the right to be free from harm. If you stick a
screwdriver in your eye, learn to be more careful; do not expect the tool
manufacturer to make you and all your relatives independently wealthy.

ARTICLE IV: You do not have the right to free food and housing. Americans
are the most charitable people to be found, and will gladly help anyone in
need, but we are quickly growing weary of subsidizing generation after
generation of professional couch potatoes who achieve nothing more
than the creation of another generation of professional couch potatoes.

ARTICLE V: You do not have the right to free health care. That would be
nice, but from the looks of public housing, we're just not interested in
public health care.

ARTICLE VI: You do not have the right to physically harm other people. If
you kidnap, rape, intentionally maim, or kill someone, don't be surprised if
the rest of us want to see you fry in the electric chair.

ARTICLE VII: You do not have the right to the possessions of others. If you rob, cheat or coerce away the goods or services of other citizens, don't be surprised if the rest of us get together and lock you away in a place where you still won't have the right to a big screen color TV or a life of leisure.

ARTICLE VIII: You don't have the right to demand that our children risk their lives in foreign wars to soothe your aching conscience. We hate oppressive governments and won't lift a finger to stop you from going to fight if you'd like. However, we do not enjoy parenting the entire world and do not want to spend so much of our time battling each and every little tyrant with a military uniform and a funny hat.

ARTICLE IX: You don't have the right to a job. All of us sure want all of you to have one, and will gladly help you along in hard times, but we expect you to take advantage of the opportunities of education and vocational training laid before you to make yourself useful.

ARTICLE X: You do not have the right to happiness. Being an American means that you have the right to pursue happiness - which by the way, is a lot easier if you are unencumbered by an overabundance of idiotic laws created by those of you who were confused by the Bill of Rights."

Speculation on a speculation and then trying to pass it off as an important question that "must be answered" is not a criterion to demand anything.

The "motivation" of the FCC was all spelled out in the Communications Act that created the FCC. Their task is to regulate all US civil radio.

If you wish to ascribe certain emotionally-biased "motivations" to the FCC's decisions, then you are simply describing decisions that apparently upset you personally. The FCC is tasked with regulation of all US civil radio for all citizens...not a minority of a minority group in a single radio service.

Of course, if you don't like the FCC's decisions you can withdraw to some on-the-air clique (for CW-tested licensees only) or make up interesting "conspiracy" theories of how you and your friends are being persecuted. Tsk, tsk, tsk.

>we have a lot more in common than we really want to acknowledge.

The psychology behind the motivations of existing in a public venue is much more complex than you realize. No degree is required to understand that if one has been involved in computer-modem communications on BBSs or Internet newsgroups.

>We're all (well, almost all) licensed hams, and most of us have passed at
>least a 5WPM Morse test.

Why is any morse test passing required at all?

Aren't the "specifications" you've outlined based on your own personal preferences, traditional aspects, and all that?

Moving off of a newsgroup and into a licensed-amateurs-only venue seems to be just an effort to get rid of "disturbing" or unwanted commentary by those who do not share your personal opinions. Anyplace else that would be called denial...or wearing blinders or ear protectors ("hear no evil, see no evil" monkeyshines).

All civil radio regulations are for the entire citizenry and are in the public domain. Commentary in, of, about them should also be in public.

>I propose a Rrap net, each Wednesday evening at 0300UTC (10 PM EST, 9 PM
>CST, 8 PM MST, 7 PM PST) on 28.350, a QRG available to everyone who has

>want to know what I think of as the "epitome" or "pinnacle" of the ARS
>is, I think it is homebrewing.

I made a GENERAL statement that applies to ALL PCTAs.

Some PCTAs have mild opinions on the retention of the code test.
Some other PCTAs seem to have almost-rabid responses to
elimination of the code test. THOSE are the ones I addressed in
my general statement.

> I am amazed at your ability to read between lines to the point of
>exclusion of the content of the letter.

I sent no "letter." I posted a message in a public newsgroup. As
such venues go, any public message is open to any sort of
commentary by anyone...whether or not it relates directly to the
content of a previous message.

Please keep that in mind since it is the de facto method of
public messaging that began first on a section of ARPANET that
became USENET in the 70s and 80s, finally coming into public
view when the Internet was formed and went public-access in
1991.

> You seem to like to equate my posts as some sort of attack on
no-coders.
>I can assure you it is not, but I think you are trying to intimidate me
>into not posting. Why would you do this> Should I not post my opinions here?

You seem to be suffering a common malady of reading public messages on your personal computer and assuming they are just for you or about you. They aren't. All public messages have the same content on anyone's computer, do not necessarily apply to one individual.

If you feel "intimidated" that is strictly your own interpretation.

Some cannot stand strong statements of opposite viewpoints, especially when they have no valid arguable viewpoints. Those individuals (general group) should leave and find a venue that satisfies them (one has suggested a morse-tested-only on-air net schedule). Or, one can remain in a newsgroup and attack those with opposite opinions using personal epithets and pejoratives. Some (a few in here) use that ploy and that IS an attempt at intimidation.

If you feel that each and every statement on a subject opposite to your own personal opinion is an "intimidation," then I would suggest psychological therapy. Remember, this is a public-access venue and your own personal opinions are not the model for citizens regulated by a federal agency.

: Why is any morse test passing required at all?

I have no idea. Take it up with the PTCA.

: Aren't the "specifications" you've outlined based on your own
: personal preferences, traditional aspects, and all that?

No.

: Moving off of a newsgroup and into a licensed-amateurs-only
: venue seems to be just an effort to get rid of "disturbing" or
: unwanted commentary by those who do not share your
: personal opinions.

It may seem that way to you, but I have invited everyone to participate, and
have suggested a way that even unlicensed folks can participate.

: All civil radio regulations are for the entire citizenry and are in
: the public domain. Commentary in, of, about them should also
: be in public.

28.200MHz is of course a frequency which can be monitored by the entire
citizenry, even if they chose not to participate directly.

: ...or be elitist or in a certain clique, withdrawing from "bad" public
: commentary on radio regulations that apply to all citizens.

I haven't suggested any sort of "withdrawal", and all citizens are still
free to give "bad" public commentary.

Do ADA students get more time on SATs?

How is the PE test administered for someone who s blind?

> >We do the same thing for handicaped hams now...e.g. we can

They get those questions wrong?

Actually, I see NO reason to memorize band edges anyway.
That's what a frequency chart is used for...and the fact that band
edges can and do change, makes memorization pretty silly (IMHO).
If I am in doubt about an operating frequency I look it up.

> Argument still comes down to this: Much of what is in the writtens is not

At this point, your argument isn't accepted by the FCC...BUT it
can be noted that these "other" subject areas don't stand on a
separate pass/fail application of the material in the tests.

So you ARE saying if a ham that hasn't shown proficiency
of morse at even 5wpm then that ham shouldn't be allowed
to operate morse?

If yes, then how do we explain the ONLY two morse only subbands are
VHF and ANYONE even no-code techs can operate there using
morse as slow as they wish.

> >> 2) Morse has a symbiotic relationship with simple radio equipment. Very

No it isn't at all...UNLESS an individual wants to make it so for
his/her own learning process.

> Case in point: Some time back on rec.radio.amateur.homebrew,
> there was a request for designs of HF ham transceivers that could be
easily

> many of them do you think could build an SSB transceiver from scratch as a
> first project?

Bottom line...it is purely optional at the individuals request.
In fact, you don't need tobuild anything to become knowledgeable
about radio basics. Building may be helpful for people, but
it sure isn't needed.

> >> 3) Hams using Morse are overwhelmingly well-behaved on the air while

> Sure it does. Just look at the enforcement letters.

That just sez those using the mode find it less capable of
violations...it also is far less susecptable (sp) to detection
even if violations are going on.

> > The reality is that it is far easier for the FCC to listen and hear
> violations when
> >voice is used vs morse.
>
> Most FCC enforcement action is complaint-driven. Somebody writes in and

And since more operation is voice, the majority will certainly
be tilted towards voice related violations...especially for
abuses of language.

least
> the test used to insure that.

IF and only IF they want to use it. We already know that most
people don't and, having passed the test, they abondon any
further pursuit of morse.

> >> Of course the FCC disagrees, and it's FCC opinion that makes the rules.

I respect all CBers (assuming they operate legally).

When a CBer does NOT operate legally, they get no
respect from me. Freebanders deserve NO respect from anyone.

Larry, Hans gave you the opportunity and the invitation. You blew it.
Maybe he'll give you another chance sometime soon. Or you can take
Kelly up on his offer. No, no, not the offer to be nearby when you're
being shot at, but the offer to get together on the air. I'm sure you
two have a lot in common.

73, Brian

Maybe Bruce will counter-suggest one of his 275 uppers and lowers that is illegally available to everyone.

efficiency.
>>
>> Given unlimited time on a test like the SAT, most people will get a higher
>> score than when timed.
>
>Do ADA students get more time on SATs?

There are a many accomodations given to students with documented learning
disabilites and physical handicaps. Extra time is one of them, and is somewhat
common.

A few years back a prospective lawyer sued and won a case involving extra time
on the bar exam due to learning disabilities.

Note that qualifying disabilities go far beyond obvious physical ones like
blindness or various kinds of paralysis.
>
>How is the PE test administered for someone who s blind?

I don;t know. I would imagine that the test would be available in Braille, or
would be read to the applicant. Time is an issue in the PE tests, too.
>
>> >We do the same thing for handicaped hams now...e.g. we can

>edges can and do change, makes memorization pretty silly (IMHO).
>If I am in doubt about an operating frequency I look it up.

The need for band edge questions can be argued both ways. Example:
Can you guarantee that all hams will have a band edge chart available whenever
needed?

Nope - I'm saying that there should be Morse-only parts of each of the ham bands.
>
>If yes, then how do we explain the ONLY two morse only subbands are
>VHF and ANYONE even no-code techs can operate there using
>morse as slow as they wish.

How many actually do that?

The 50.0-50.1 and 144.0-144.1 segments are legacies from 40+ years ago, created as a haven for EME, MS and other weak-signal work. Oddly enough, the 2 meter slot was once 147.9-148.

For the folks involved, homebrew was the only way they were going to get on the air.

>In fact, you don't need tobuild anything to become knowledgeable
>about radio basics. Building may be helpful for people, but
>it sure isn't needed.

That's true if a person wants purely theoretical knowledge. Theoreticla knowledge doesn't require a license, either. Our licenses are for operating, not building.

And amateur radio is about practical radio as well as theoretical.
>
>> >> 3) Hams using Morse are overwhelmingly well-behaved on the air while

There is almost as much CW operation as voice on the HF amateur bands. Just take a listen some time.
>

>So only those that favor Morse code can participate in a policy net?

No, that's not what Hans proposed. 28.350 kHz is in the 'pnone/image part of the band, and is available to all US licensed hams except Technicians who have not passed a code test. "Favor" of Morse code or code tests is not required.

Hans has also proposed a way for those who do not hold the required license to participate - just find a ham with the required license who will allow you to participate using his/her station, and be the control operator for you.

There's also a very simple option: Get the required license yourself.

>This is very biased and unfair!

How so? Is it biased and unfair to require a license?

Do you want to muzzle the discussions of hams with licenses, saying they cannot discuss amateur radio policy matters on the air because YOU don't have the required license? Sure sounds like it.

>Both no coders and coders should be included.

What frequency and mode do you suggest?

The only thing I see wrong with Hans' idea is that the frequency and time do not match well for the required coverage at this part of the sunspot cycle. A 20 meter QRG somewhat earlier in the evening would cover the whole country fairly well at this time of year, based on how the bands behaved a few weekends ago.

20 meters requires at least a General license, but said license requires no more code testing than any other class. Code testing is still required by the FCC, due to the requirements of S25.5.

FYI...

Just returned from some shopping and noticed that GMRS portables are
being marketed in "Sam's Club" (similar store to BJ's, Coostco, etc.).
The sign did say FCC license required...but it didn't say it was required
to purchase. Price was $59 for a pair complete with charger units.

Interestingly, the units are "made" by Southwestern Bell.

Cheers,
Bill K2UNK

I understand that it was frowned upon to ring that bell when calling CQ.

I remember some silly games played with old teletypes in the college ham club in the 1970s. Like running a paper tape with the holes encoded to produce:
"Hi, I'm (victim of fun poking), I'm going to jerk off now.
(up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift, up shift, down shift). Ahhhhhh..... "

No, we didn't send that over the air!

Saturday afternoon on 10 meters SSB on that freq. would work fine (unless a
contest is going on). Or 28.005 CW. Chase off any freebanders :-)
4PM EST would work across the CONUS.

Mike we long ago learned to conclusion that Anderson hates ham radio
with his entire being. Why that is so we can't conclusively say, but it
is more than apparent it has something to do with his inability to cause
himself to qualify for a top ham radio license, thus he wants nothing to
do with any of it other than to use his ample idle time to continuously
denigrate all of ham radio and everyone who is involved in it, save his
little butty Brian Nurke who is about a sad a case as is Anderson.

My high school English teacher would grade your composition paper "F"
if you wrote "there" for their". Besides, how would the no-coders know
if you snuck a look at the question pools the night before the test late
at night at home alone? I got my "extra lite" a few years ago, and I
probably could have passed without studying. But like any reasonably
good student in school, I took legal advantage of the resources available and
did some studying.

Because the Fools were at a Hamfest preparing to take the test. Thats when they made the Bet, and I just walked in with them, and took it. I got 100% and the 2 Fools failed. The Extra written was a Joke. It took me 8 minutes from the time I started till the time I finished. Oh, and the No-Coders are still No-Coders and still have no Clue what there doing.

Kinda like I stated earlier here before..... newsgroups are primarly an entertainment source as well as the occasional learning source.... To me everyone here is merely a FONT or TYPESET until I actually meet them either on the air or in person. Can't speak for others here, but I do care about others here in newsgroups as well as on the air, even if mine or their politics/policies/procedures are not in agreement.

On a lighter note, since you said something about not picking up a microphone..... wouldya just listen in?? :)

73's,

>>2) Morse has a symbiotic relationship with simple radio equipment. Very
>useful
>>for those who want to build and learn about basic radio.
>
> "Symbiotic relationship?!?" Nonsense, gobbledegook babble.

The "nonsense, gobbledegok, babble" is vcoming from someone who SHOULD know better...and ALLEDGED radio electronics "engineer" (no evidence yet provided other than some dubiously plagerized quotes)

>There is NO "symbiote" living within any radio...(SNIP)

Good thing he said "symbiotic" rather than "symbiote" then, huh..???

>A radio is simply a bit of electronics hardware that operates on
> principles of known physics. Any "magic" or "biological" aspects
> of or with radio are purely subjective, emotional thoughts.

Lennie, you were making a reasonably well stated argument until you started in on THIS crap again. NO ONE stated anything about "magic" or argued the physics of radio.

The use of Morse Code, or more appropriately, the use of continuous wave modulation, IS "symbiotic" with SIMPLE radio equipment.

In recent years the proliferation of integrated devices has made it easier to also use other more "complex" modes. However the most basic AND efficient of radio transmitters remains the CW transmitter.

This is a fact, undisputed even by REAL engineers.

>"Usefulness in building and learning radio" is not a regulatory item
> or requirement in any Part of Title 47 CFR.

In those exact words..?!?! No. However, Your Antagonisticness, you are redirected once again to the REGULATORY language of the basis and purpose of the Amateur Radio Service as codified in 47CFR97.1 as it pertains to the expectation of taking the opportunity to do EXACTLY that as a licensee in the Amateur Service...Why heck, I bet even YOU might learn a thing or two about radio if you were to participate.

>Morse code mode at a rate of 5 to 20 or even to 40 WPM does not
> lend itself well to emotionally-laden words/phrases of inappropriate

> behavior.

It does, however, end to be a mode used in a more mannerly and
professional maner than those who are prone to quick gratification and easy
antagonism of rendering a profanity or insult via the spoken word.

>It carries NO inflections, tonalities, or common human
> clues available in common human visual-audible communications.

Wrong. It DOES carry inflections and can carry "tonalities" that make it
as distictive as a spoken word. Those proficient in it's use know this to be
true, and it is well documented in the histroy of radiocommunication...NOT just
Amateur communication, either...

>On-off monotonic codings are ill-suited to either insults or
> expressions of any emotion.

"Ill-suited" only if you are not proficient in the use of Morse Code
itself. One could say that the use of sign language is just as ill-suited,
however a single, rasied middle finger "says it all" as well as the spoken
phrase it is commonly accepted as representing.

>Do we need more proof of long-time radio amateurs' fallibility?...(SNIP)

Lennie, if you'd learn to stick to simple facts and technically valid
facts, you'd be more accepted...HOWEVER you find it necessary to attack Amateur
Radio operators personally then wonder why your innate wisdom is not
universally accepted.

>The "primary mode" on HF amateur bands is voice. More
> communications is conveyed by voice than by on-off morse codings.

And you have determined this to be true...HOW?

Facts? Tables? Studies? Polls? You have expressed a statement here.
Now please justify it with facts.

>Speculating on speculations is a nonsense exercise.

You seem to enjoy doing it.

>If "illegal operators" were "bedeviling" the FCC, the FCC would have
> acted long before this.

BULL! The FCC long admitted to NOT chasing these creeps due to economic
and manpower deficiencies, NOT a lack of desire to do it!

>Long-time radio amateurs seem to be the
> ones "bedeviled" about the "hoardes of cbers running high power."

Only in the sense that WE (Amateurs) are the ones who pay a price for
THIER abuses. It is legally licensed and operating Amateurs who cannot buy
amplifiers that can operate on OUR allocations without modification due to
someone else's misdeeds.

Started off strong, Lennie, got emotional then personal. Same antagonistic crap as usual.

Get original, Putz. You're too old to be THAT boring.

Steve

OR....It COULD be an attempt to utilize the very licenses that we all (or most all, anyway) possess.

>Anyplace else that would be called
> denial...or wearing blinders or ear protectors ("hear no evil,
> see no evil" monkeyshines).

You are welcome to step right on down to the nearest VE session and spend 30 or 45 minutes passing the tests so that YOU may drive over to the local HRO shoppe and add the necessary equipment to your "SWL shack" to join us.

No one will deny you the opportunity to do so.

>All civil radio regulations are for the entire citizenry and are in
> the public domain. Commentary in, of, about them should also
> be in public.

And so they shall...I can almost swear that NONE of us will be using any crypto gear to effect our communications in, Your Putziness.

>>Be there, or be square.
>
> ...or be elitist or in a certain clique, withdrawing from "bad" public
> commentary on radio regulations that apply to all citizens.

I do not recall any provision in Part 97 denying you (or anyone else in particular) access to an Amateur license, Lennie. And once you ahve it, you will be free to join ANY net you care to join, in any mode you care to use, on any subject you care to discuss...NOT that anyone will care to discuss it WITH you...

I doubt you could find a test by a VE who could get you onto the FCC database by THIS Wednesday, Herr Geezer, however I am sure you could be licensed and on-the-air by NEXT Wednesday...IF you wanted to be...

Looking forward to hearing some not-so-familiar/familiar voices on the air...Two of which WON'T be there....!

K4YZ

Christmas Eve, remote tour Korea, w/o family. The wx station was
quiet, then jingle bells started playing. It was nice. I'll never
forget the sound of jingle bells played on a teletype.

Of course, there was all the usual NOTAMS and PIREPS about a fat guy
in a red suit and eight tiny reindeer.

Mike, DICK, I see none of that in his postings. I see Len putting
forth a very rational argument for the elimination of all code
testing. I think Len would be the last person to try to keep someone

from posting their opinions. On the other hand, I see a lot of maneuvering to keep Len from participating here.

Great Story! Bruce, you need to have this one published in QST. If
you start now you might make the April issue, you know how far in
advance they lay out the magazine.

Krell, yes, everyone makes typos, but Bruice sees it as some kind of
badge of courage. The rest of us see it as the mark of a functional
illiterate.

I have seen them in Circuit City and even Walgreens. Just for
the heck of it, I ask store personnel about the license. Many
clerks will say it is not necessary to apply for a license. The papers
are there just to fulfill a legal requirement to sell the units in the
store.

That just shows what clerks do not know. More than likely, it is a managment policy in order to sell radios. I fight this battle with the managment where I work all the time.

Dan the only reason they are still Whinning ,is because they are still trying to justify there Dumb Down License. The CW test is a Joke, the written is an even a Bigger Joke, and they know they can never come up to Real Ham Status, because the FCC took that away from them. So now they are stuck with a Dumb Down CBplusser License, and they can never obtain REAL HAM STATUS.

This is why MURS was created. Too many radios weren't being licensed. I see this occurring for the UHF radios also. No one wants to bother with rules (especially the vendors). One of my co-workers bought a boat two years ago and was seeing who he could talk to from his boat radio - while the thing was sitting in his driveway!

Our WalMart is selling them like that also.
GMRS and FRS radios side-by-side.
"Plug and Play" sale - wonder how long it
will be B4 we see cheap Chinese 2 Meter HT's
sold the same way at WalMart??

Ps: check out truckstops also - cash & carry.
FRS and GMRS in blister packs - add batteries
and your on the air......

(most truckers are now using FRS radios
in additionm to CH-19)

The Rat Shacks here in Houston sell a limited selection of
marine radios. I've heard people buying them make comments
like, there's no CB crazies on them and I got one in both cars
and at home, they're good for keeping the family in contact without
having to pay cell phone bills, etc. It never occurs to them they
need a license, and the clerks just want to make a sale. I could be
wrong, but I think all this sort of thing started after the FCC closed
its monitoring stations around the country in 1996. A shame, but I
guess nobody cares anymore.

I have. They refuse to discuss the subject. They are only
interested in insulting NCTAs.

>: Aren't the "specifications" you've outlined based on your own
>: personal preferences, traditional aspects, and all that?
>
>No.

Questionable. Your commentary, intermittent as it is, is clearly
on the side of morse code as a personal preference and in the
encouragement of others to use that mode...strong enough to put
you on the PCTA side.

Removal of the code test will result in greater freedom to get into
amateur radio, enjoying the many non-morse-code aspects of that
hobby. Morse code mode or on-off keying codings are not
mandated by US amateur radio regulations for any US radio
amateur. Any US radio amateur has the option of choice for any
allocated mode or modulation.

>: Moving off of a newsgroup and into a licensed-amateurs-only

Yes, it "seems that way" to me. This newsgroup ALREADY EXISTS.

Your "invitation" is open ONLY to already-licensed amateurs due to
EM spectrum regulations in the USA. In the face of an already-
existing public venue for discussion, the "invitation" is viewed as a
rather elitist grouping of participants.

>: All civil radio regulations are for the entire citizenry and are in
>: the public domain. Commentary in, of, about them should also
>: be in public.

>
>28.200MHz is of course a frequency which can be monitored by the entire
>citizenry, even if they chose not to participate directly.

This newsgroup already exists, is public and not moderated.
Further, the messages and discussion content are locally stored
and distributed, are not intangible as are most radio
communications. You have not given details of any freedom of
expression on this proposed amateur-radio-only gathering.

>: ...or be elitist or in a certain clique, withdrawing from "bad" public
>: commentary on radio regulations that apply to all citizens.
>
>I haven't suggested any sort of "withdrawal", and all citizens are still
>free to give "bad" public commentary.

Perhaps you are subconsciously paraphrasing Senator Goldwater's
presidential campaign phrasing to be: Elitism in the defense of
old-time amateur radio is not a vice. :-)

>
>And from the earliest days, Morse code has been the "mother tongue" of
>amateur radio.

In the "earliest days" of ALL RADIO, on-off codings were the ONLY
practical means of conveying any intelligence in that medium.

The ONLY practical means with primitive radio technology.

To say that on-off morse codings are the "mother tongue" is to
say that damped sinewave generation through "spark" or rotary
generators are the "mother" of all transmitters. No one "speaks"
spark or Alexanderson alternators these days.

International Morse Code became the "mother tongue" of all on-off
keying codes by international agreement, not by any other means.
Up to that international agreement, the number of different on-off
codings in international use in all of radio, amateurs included, were
several dozen.

When radio first began (recognized as 1806), teleprinting telegraphy
was already in use and beginning to make inroads into landline
telegraphy, displacing manual telegraphy. By the time of the first
US radio regulatory agency (1912), teleprinting telegraphy was
increasing on landlines, so much so that it was a definite threat to
all manual telegraphy, both nationally and internationally. So much
so that international agreements were sought to achieve a common
standard to permit international communications. The first, the 5-
level "Baudot" code, is not considered the "mother tongue" of
teleprinting telegraphy, yet it was already carrying more "traffic" in
landline communications than manual telegraphy.

Test element 1 for a US amateur radio license having below-30-MHz
privileges has NOT been eliminated.

ITU-R Recommendation S25.5 remains the same as it was a year
ago, two years ago. WRC-03 is not until next year.

...and the PCTAs are STILL COMPLAINING about alleged
complaints of NCTAs.

"Rational arguments" are not wanted by some. Rational arguments threaten their boasts of superiority, self-perception of expertise in an avocational radio activity.

The FCC is tasked with regulation of all civil US radio and accepts input/commentary from all citizens, in or out of any particular radio service. Those who wish to preserve their own standing in a group, to rationalize that position, all wish to exclude any they perceive to be "threatening" to them...hence the bullying tactics, intimidation, personal insults, and charges of "not being one of 'us'" to attempt exclusion from discussion.

Bullies and insulters cannot (observably) argue a subject. They are fixed-tuned to low-level thinking and must attack the person of anyone with an opposite-to-theirs opinion. Ordinarily, that might be generalized as a survival tactic. By appearances in here, all it becomes is a form of sociopathy known as bullying.

Interestingly, the majority of the bully-insulter group are PCTAs. Removal of the code test would end their federal guarantee of certificated skill in a singular aspect of radio operation. In short, they would no longer have "bragging rights" to their "superiority." All the claims to "brotherhood in a community" sound farcical when they go into bully-insult-intimidation mode about the code test removal. Any change in regulations is a threat to survival through braggadoccio. See terms like "extra lite," "nickel extra" and "pre-restructuring (superiority)." All are used to demean new US radio amateurs in order to boost their own self-perceived standings.

Len Anderson

A couple thoughts Brian:

The thread isn't even about elimination of CW. It's about an initial invitation to get involved in a contest, then a Mr Vshah who apparently thinks that most aspects of ham radio are not to his interest.

Not every thread has to be about the elimination of CW. It's a boring subject to me at least. Now if we wanted to discuss the post CW world for amateurs, that might be worthwhile.

As for Mr Anderson's arguments about elimination of CW, sure, they are pretty fair arguments. But they are put together in a way that is not going to win many converts. But then, I doubt that is the purpose.

But then, IIR, he believes that manners are a sign of weakness.

: Questionable. Your commentary, intermittent as it is, is clearly
: on the side of morse code as a personal preference and in the
: encouragement of others to use that mode...strong enough to put
: you on the PCTA side.
:

I am certainly a flag waving member of the PCU(se)A, but I'm not a member of the PCT(est)A. I think a lot of others here are (K2UNK comes to mind) similarly inclined. I doubt that I'm the only person who has both a FISTS number and an NCI number, since the two are not incompatible in their goals. FISTS promotes the USE of Morse, NCI promotes the end of Morse TESTS. I find no conflict in supporting both of those aims.

:
: Removal of the code test will result in greater freedom to get into
: amateur radio, enjoying the many non-morse-code aspects of that
: hobby.
:

See my public comments to FCC on this matter. Do you find any disagreement?

:
: This newsgroup already exists, is public and not moderated.
: Further, the messages and discussion content are locally stored
: and distributed, are not intangible as are most radio
: communications. You have not given details of any freedom of
: expression on this proposed amateur-radio-only gathering.
:

There are virtually thousands and thousands of "amateur-radio-only" gatherings occurring every day, each of which has absolute freedom of expression (within the bounds of avoiding foul and obscene language). To my personal knowledge, those gatherings have discussed (among other things) Morse testing for over 40 years, long before this newsgroup was available.

As you have correctly pointed out many times, the amateur radio spectrum is very public venue and we are prohibited from disguising the meaning of our transmissions. Therefore your objection to an on-the-air gathering of hams who also meet on rrap is puzzling. We promise not to talk in secret codes (the QRG chosen is voice) to hide our nefarious ideas.

> privileges has NOT been eliminated.

ITU S25 has not been repealed. The United States has reduced, to the lowest reasonable level, the code test that still meets the spirit and letter of the law.

You remember the "law", don't you, Lennie...?!?!

>Veteran, US Army 1952-1960

I suppose you do. You claim to have been a veteran of the Armed Forces, therefore I have to assume that you remember the oath you took to uphold and defend the Constitution of the United States...The SAME Constitution which empowers Congress to make treaties with other Nations. It also requires that we honor our promises to adhere to those treaties.

Leonard H. Anderson, a known pathological liar and antagonist in this forum, would have the uninformed and unaware believe that there is some conspiracy afoot to deny "the deserving" an Amateur Radio license.

What hog wash.

You DO have some guts, Lennie...constantly bulldozing forward with your insane rhetoric and unfounded black helo theories on Amateur Radio Policy. I say guts because it must take some to constantly make so ready a fool of yourself in public.

Thanks for the laughs, Lennie!

> hobby. Morse code mode or on-off keying codings are not
> mandated by US amateur radio regulations for any US radio
> amateur. Any US radio amateur has the option of choice for any
> allocated mode or modulation

Heard this rhetoric before. Back in 1990, just before they enacted the No Code Technician. We were going to get hoardes of new licensees in the service due to the removal of the Morse Code requirement from the Technician Class license.

The elimination of the Morse Code exam from the Technician license granted access to 97% of all U.S. Amateur allocations

We also heard such rhetoric when the Novice Class license was "enhanced" to allow voice on 10 meters and allowed new VHF voice privileges. (1987...?)

Neither provided the leaps or bounds expected. Growth rate/losses have remained almost constant.

>>It may seem that way to you, but I have invited everyone to participate, and
>>have suggested a way that even unlicensed folks can participate.
>
>Yes, it "seems that way" to me. This newsgroup ALREADY EXISTS.

Your only regret is that you won't have any way to antagonize us on the air. No problem. I am sure you can record, then have transcribed, the comments from all participants, then take great lengths to respond to each in turn here.

None of your "rights" have been abridged.

Furthermore, Amateur Radio policy matters have been a subject of discussion on those very same airways since the inception of Amateur Radio, and your whining about where certain discussion should be held is hillarious.

>Your "invitation" is open ONLY to already-licensed amateurs due to
> EM spectrum regulations in the USA. In the face of an already-
> existing public venue for discussion, the "invitation" is viewed as a
> rather elitist grouping of participants.

A course of action has already been made available to you. Go to one of your "token" Amateur buddies, tell them what you want to do, and I am sure, considering your great wealth of radio knowledge, will let you sit down in front of the mic of their stations.

>This newsgroup already exists, is public and not moderated.

So what? Someone creates an on-line newsgroup therefore all other venues of discussion are now illegal or inappropriate?

> Further, the messages and discussion content are locally stored
> and distributed, are not intangible as are most radio
> communications. You have not given details of any freedom of
> expression on this proposed amateur-radio-only gathering.

What details does he need? You want a "record"...? Tape record it and have it transcribed.

You have offered very little in "rational arguement" in this forum, Lennie. You start off with "rational" sounding rhetoric, then quickly digress into black helo theories and personal attacks.

>Bullies and insulters cannot (observably) argue a subject.

...But you DO try, Lennie...

>Ordinarily, that might
> be generalized as a survival tactic. By appearances in here, all it
> becomes is a form of sociopathy known as bullying.

You should know. You have tried your best to be good at it.

>Veteran, US Army 1952-1960

I find it interesting that when myself or any several others of this forum mention their previous service, we are blasted, by you, as trying to somehow make it relevent to Amateur Radio.

You also make quick work of anyone who suggests anything of historical or nostalgic value in Amateur Radio as being "stagnant" or some other equally insulting adjective. Obviously this does NOT apply to you...???

Once again Veteran's Day greetings were passed around, yet Leonard H. Anderson did not take any time to acknowledge or participate in those words of appreciation...Yet you take the opportunity to "brag" about attending Veteran-related functions outside this forum.

Of course I wouldn't expect that from a rear area widget who attempted to embellish his own service on the honor of those who fell in battle.

It's hard to enforce GMRS because, to the best of my knowledge, there is no identification required to use them (unlike ham radio, callsign ever 10 minutes), so most people just get by with it. I don't think they're used much except illegally, sad to say.

Realistically? Realistically, it is my belief we'd never hear Larry as net control of an emergency net. So, I don't expect to ever encounter the situation you describe above. That having been said, it is not probable that I would be participating in a net wherein Larry was net control...as it seems to me he has stated himself many times that he does not even own a microphone. Since Larry would not be on a phone net, and I would not be on a CW net, we would not have to make any decisions about dealing with each other.

Moreover, if you cannot recognize my unwillingness to "work" with Larry, and that I realize that would be a detriment to a net, then I say you're making a pretty piss-poor decision to call me on that. I would much rather have persons with deeprooted dislikes for each other stay off a net than to have their participation. You're describing an emergency in quotation marks above--and I presume that to mean a typical emergency: weather, etc. However, in a true disaster, I would be hard pressed not to join and help. I don't know what the situation is like where you are, but here there is plenty, plenty of help--and those who choose to stay out of a net are hardly missed.

It would be interesting, at best, to see/hear how Larry would handle an emergency net. I'll never forget one of my first encounters with Larry here, where he demanded that in an emergency I'd *have* to turn over my equipment to him and, if I did not, he would confiscate it. Like to see that happen, too.

By the way, last I was studying, Orange County emergency response operations from the amateur community should, in my opinion, be a model for many in the country. If what people have told me is true (that RACES/ARES work extremely close and well together; that other radio services are often employed; that non-amateurs are encouraged to participate for support services, etc.), then you should boiler-plate that and get the word out.

Here's a way almost anyone who reads this can participate in an on-the-air
amateur radio policy discussion on the ham bands:

1) Set up an effective station for the amateur band and mode to be used.
2) Obtain the necessary license by passing the required tests.
3) Operate the station in 1) as required by the governmental agency who granted
the license in 2).

The fact that someone passes a test to obtain a license does not in any way
indicate agreement with the test requirements.

It started as a fallout of the "CB is for everyone" craze of
the '70s and was exacerbated by the FCC's misguided and
ineffective shift (for political reasons) from agressive
enforcement to encouraging voluntary compliance "through
education" in the '80s.

And I have to say it again - the monitoring stations are not
"closed" in the sense of "dismantled" - they were automated,
remotely controlled, and therefore are unattended although
fully functional for what they were intended for - HF DFing.

Tracking and identifying unlicensed mobile or fixed installations
of that type was never the function of the monitoring stations anyhow.

I never claimed to be unlicensed or an antagonist. I claimed I did not know Morse. Stop calling people creep and putz.

When you first proposed the idea, it did seem you were sneaking in Morse code as a requirement.
About actually USING your license. This makes sense, I would have to admit.

I agree with this statement made by lenover21@aol.com :
Removal of the code test will result in greater freedom to get into amateur radio, enjoying the many non-morse-code aspects of that hobby.

The reason license numbers did not increase with no code could be from several factors. Many people do not know about Ham Radio. Some people do not find contesting or ragchewing all that fun. Ham Radio is presented from these aspects, rather than radio direction finding, antenna setups, construction activities. Even if they are not EEs, people like activities where they interact with. Lastly, some people may find Hams strange. All of this has nothing to do with code. Eliminating code requirement WILL help the numbers.

It is Ham Radio's loss, repelling the technically inclined in favor of Morse code.

Not only is Ham a hobby, it is also a service. As a service, it matters that the license classes mean something. Also, pride in the hobby, should make the license and other certificates such as antenna modeling, emergency communications, should be very meaningful.

"Fully functional" ? Better check your sources a little
closer for accurate information. Travel funds are eating the
budget up alive trying to keep these "automated, remotely
controlled" pieces of junk operational!!!!!! And half the dam
sites, which were in the boondocks in the 1940s, are now
sitting in the middle of thriving metro areas, on prime real estate,
along with the attendant electronic interference. Pretty shitty
planning but then how can one expect federal bureaucrats to
have any long-range vision beyond their next greedy selfish
promotion. The value of the real estate these dinosaurs sit on is
what will do most of them in within the next few years, from what
my sources tell me. Uncle Sam stands to recoup what he originally
spent on the land in the 1940s, a couple hundred times over!!!!!

Yes, that's right. That isn't a good argument tho' because there probably won't be *that* many more hams coming in.

> The reason license numbers did not increase with no code could be from several

True, like many people don't know about a lot of things. This isn't a high profile type activity

> Some people do not find
> contesting or ragchewing all that fun. Ham Radio is presented from these

Let's look at your list

Contesting - I just love it. You can learn a lot from it

Ragchewing - These people talk more in one hour than I do in a whole day. Double-yuck.

Radio direction finding - A cure for insomnia in my book.

Antenna setups - Interesting, but there's probably more bravo sierra going on in this area than any other area of hamdom.

Construction activities - Now your talking! This is what I think ALL hams should be doing.

My point is there are so many activities because there are so many interests. Some of what interests you leaves me cold, and we all know how you feel about contesting. But.. It's all good, man.

> Lastly, some people may find Hams strange.

Don't look now, but Hams ARE strange. If we were "normal" people we would be watching "Survivor" or some other equally bad waste of time on television instead of working DX or other hobby activity. We would be doing "popular things" because well, they were the popular things to do! I'm quite happy not being normal, I'll bet most other hams are too.

> It is Ham Radio's loss, repelling the technically inclined in favor of Morse

He and all the other code bashers will never understand the pure
simplicity of Morse code operations on ham radio. Sure is their loss.

You would think if she was so proud of them Puppies, that she decided to use it in her Callsign, that she would at least post a picture of them. Come on TIT were all waiting, show us your TITs.

Eight minutes, huh? No studying, huh?

How could you have read the questions and done the math in eight minutes?

I don't think so.

How much did this exam actually cost you?

I see. In your haste to find problems with my post, you chose to latch upon a letter versus post definition. If you reread my *post*, I wasn't even referring to any *post* by you, I was referring to your ability to read between the lines of *my* letter, or *post* if you wish.

>> You seem to like to equate my posts as some sort of attack on
>>
> no-coders.

Umm.. you commented on my *post* If you wanted to make general statements, not connected to my post, you could do what I sometimes do, which is to delete the content of the reply before posting my own message.

>
> If you feel "intimidated" that is strictly your own interpretation.

I only asked if you wer trying to intimidate me. Now that I know you weren't, I'm happy.

These are being sold locally here at Wallyworld (Walmart) next to the FRS crap, and alot of these appear dangerously similar in appearance. This definitely has me concerned as to the marketing strategies of some of the mass merchandisers out there. Sounds like more encouragement to delicense services such as MURS, etc... And there is no sign notating license required at my local Walmart.

As far as this whole damned net proposal..... y'all just need to pick a time/freq./mode and go with it. Christ, with all the varied abilities/availabilities etc... the net will never get off the ground. Just do it, and those that CAN participate, WILL and those that CAN'T, won't. Like Nike says, "Just Do It."

I am even saying this being one of those that won't be able, but with more time being spent on discussion, it will never get off of the ground.

Dunno if necessarily agree with that.... I think the exam should stay as long as code-tested hams are still alive..... Once they pass on, then make the changes. I can see their side of the arguement of "I had to do it, so do you...." in my own current field of employment.

In the meantime... if the requirements dictate a certain action.... I will comply with that, even if I don't agree with it, to gain the privileges that go along with it.

You know, some people have a lot of nerve complaining about "welfare hams"
when they themselves sit around all day and collect disability checks,
leaching off of the taxpayers. Those same people are perfectly capable of
getting jobs, evidenced by their daily postings on newsgroups.

Bruce, I simply don't believe you.

And why snip/hide the part about a person not being able to read the
questions and do the math in 8 minutes?

I think that is a cogent part of my belief that you might have paid
more than the ordinary reimbursement of $10 for VE expenses. Or maybe
it really took a lot longer than 8 minutes, or you did in fact STUDY
for the exam.

In any case, your story as it is just doesn't wash. You're free to
modify it at any time.

Unless you want us to belive that you are some kind of genius; re:
their, there, they're. Pfft.

Can you remember which hams you took the bet money off of? Names,
calls? Which VEC, location, date? CSCE's? Can you remember what you
did with the all that money? Receipts?

Dan, exactly what message do you think Bruce is trying to get out if
we could only understand him?

It's sad that you don't see that Bruce has no message. His is just a
long line of misspelled insults. Always has been, always will be.

And yes, I/we are laughing at Bruce. Ever since he asked "If a CBer
marries a Technician, is she still his sister?" At first I thought
his question was just another slash and stab at Tech's or Tech's with
code. But after doing a QRZ search, it would appear that there was
female Technician in his area with the same last name as Bruce,
possibly a sister. You have to wonder.

Lennie's only satisfaction will come with the RO ordering the cessation of
all Amateur Radio activities and the silencing of all Amateur Radio stations.

And Lennie's in SoCAL.

>I never claimed to be unlicensed or an antagonist.

You HAVE claimed to be unlicensed and you ARE an antagonist.

>I claimed I did not know Morse.

"I am not a "HAM"....vshah101@aol.com

>Stop calling people creep and putz.

Stop being one.

>When you first proposed the idea, it did seem you were sneaking in Morse code
>as a requirement.

You are mixing attributes...get your quotes straight.

And it IS a requirement. No one may operate an Amateur Radio station as a control operator on frequencies below 30mHz. Hans clearly indicated he was hearing beacons on 28.200 mHz. Of course any licensed Amateur with any practical experience on HF KNOWS this is the subband used for propagation beacons.

>About actually USING your license. This makes sense, I would have to admit.

Well, gee whillikers...we're so proud.

>I agree with this statement made by lenover21@aol.com :
>Removal of the code test will result in greater freedom to get into
>amateur radio, enjoying the many non-morse-code aspects of that
>hobby.

It will make Amateur Radio easier for SOME people. It will not necessarily make it better.

>The reason license numbers did not increase with no code could be from
>several
>factors.

Amateur Radio appeals to certain persons for many reasons, always has...always will. It's not "everyman's hobby".

>Many people do not know about Ham Radio.

And many more do. Amateur Radio is more well know today than it was 50 years ago.

>Some people do not find contesting or ragchewing all that fun.

Then thank God that's NOT all there is to do, eh? Moonbounce, PACKET, Emergency Services, telemetery, satellites, Public Service, etc etc etc.

>Eliminating code requirement WILL help the numbers.

Those that don't know about Amateur radio today will probably NOT know about Amateur Radio when the Morse requirement is finally deleted. Furthermore, those who know about it but are wating for the Morse element to be lifted are probably already licensed as NCT's and are simply biding thier time.

>It is Ham Radio's loss, repelling the technically inclined in favor of Morse
>code.

So...ALL the "technically inclined" are refusing to get an Amateur Radio license because of a Morse Code requirement for access to 3% of all Amateur allocations...???

Nearly all "technical experimentation" is conducted in the VHF/UHF spectrum. Those who are NOT seeking Amateur licensure because of Morse Code are those who want access to HF for DXing purposes...period.

>Not only is Ham a hobby, it is also a service. As a service, it matters that
>the license classes mean something.

Almost all Public Service and ARES activities are on 2 meters, requiring no more than a Technician Class license.

Please cite the reference where the class of license is relevent. I am a former EC and I can tell you that ANYONE who is a licensed Amateur is welcome, Novice, Technician, General, Advanced or Extra.

>Also, pride in the hobby, should make the
>license and other certificates such as antenna modeling, emergency
>communications, should be very meaningful.

English is a second language to you, isn't it?

ALL of the activities you cite can be done by ANY Amateur...even the few remaining Novices that may be active. Morse Code is irrelevent to all of those activities.

Now...your NEXT argument?

Steve

732. Re: An Invitation to CW Radiosport

Welcome to the World of Lennie. If you can't make sense, make waves.

>Umm.. you commented on my *post* If you wanted to make general
>statements, not connected to my post, you could do what I sometimes do,
>which is to delete the content of the reply before posting my own message.

Lennie loves to aregue about how "anyone" can comment on any other comments being made in this forum, but as soon as you interject a comment into a thread wherein HE feels no one else belongs (ie: a "private" exchange) he'll quickly admonish the interloper. "Rules" only pertain to others...Not to Lennie.

>I only asked if you wer trying to intimidate me. Now that I know you
>weren't, I'm happy.

Lennie's only "intimidating" if you don't really read his posts. He comes across arrogantly, however most of his posts are very hollow. Same rhetoric...same accusastions

And speaking of accusations, I wonder where Lennie's proof of ARRL dishonesty are...??? Still hasn't made any inroads to providing TAHT material.

>>Or, one can remain in a newsgroup and attack
>>those with opposite opinions using personal epithets and
>> pejoratives.
>
>Not me!

Lennie likes to make these accusations of OTHERS using "personal epithets and perjoratives", but is wont to accept responsibility for his OWN use of terms like "thug", "jackboot", "Nazi", etc etc etc.

>> If you feel that each and every statement on a subject opposite
>>to your own personal opinion is an "intimidation," then I would
>>suggest psychological therapy.
>
>I certainly don't have a problem with differing opinions, and thank you
>for the recommendation.

We've been making the same recommendation to Lennie. It's hard to understand how a person with his alleged education and experience in radio can spend so much time in an Internet Newsgroup assailing and antagonizing a group of people whose principal reason for being here IS about enjoying radio.

I don't think Lennie ever really "enjoyed" radio. It was "a job". Lennie can quote reams of technical material from websites he plagerizes, but Lennie has never sat down in front of a radio and OPERATED it. He has absolutely ZERO understanding of how a person can find pleasure in the radio itself.

His loss. It's certainly not Amateur Radio's loss to NOT have him.

I consider actual operational skill in the use of Morse code to be
important enough to justify code testing for an HF-privileged license
at a speed of at least 12 WPM, preferably 12 - 13 WPM for
the equivalent of a General class ticket, and 20 WPM for Extra,
just like the olden days.

If you disagree with this, Dave, please explain.

Here in this county there are only 63 licensed hams and I've only heard
maybe
25 of them on the radio ever. And getting people to volunteer for stuff is
like
pulling teeth, UNLESS they get to run a blue light and siren and ACT
important.

>

We are working on getting the R.A.C.E.S. program started now. But
getting some of the 63 or so hams in this county interested is a big
problem.
Right now we have maybe 5 who have showed interest in it. And of those

5 two are already volunteer fire, one is in the EMA already, one is the local ham radio club president, and one fellow who is disabled and not able to do a lot of the things we need other than babysit the radios.

Manpower is in VERY short supply here!

False.

"Getting into" amateur radio (that is, obtaining an FCC license)has
not required a code test for more than 11 years. The highest class of
US amateur radio license has required only a minimal 5 wpm receiving
test for the past 2-1/2 years. Licenses are available to all legal
residents who can pass the tests.

Reducing the test requirements will result in greater EASE of
obtaining a license, not more freedom.

Notice that the person Vshah101 quotes has never obtained an amateur
license, and Vshah101 won't tell us 'his' callsign, license class, or
even 'his' name.
>
> Yes, that's right. That isn't a good argument tho' because there
> probably won't be *that* many more hams coming in.

The dropping of the code test for Tech in 1991 resulted in a surge of
new hams for a while, but it was not sustained. Growth since the April
2000 restructuring has not been much greater than before those changes
took effect.

Dropping the code test did not, and will not, improve the
publicity/public awareness situation in any way.

> > Some people do not find
> > contesting or ragchewing all that fun.

True - but many HAMS find those activities to be a lot of fun.

> >Ham Radio is presented from these
> > aspects, rather than radio direction finding, antenna setups, construction
> > activities.

Presented by whom? Where?

> > Even if they are not EEs, people like activities where they
> > interact with.

This sentence makes no sense. Interact with what?
>
> Let's look at your list
>
> Contesting - I just love it. You can learn a lot from it

Same here. Contesting is also technically related, because it quickly shows the strengths and weaknesses of various rig and antenna setups. Many of the technical advances in amateur radio came from contesters and DXers trying to improve station performance.
>
> Ragchewing - These people talk more in one hour than I do in a whole
> day. Double-yuck.

I love a good CW ragchew, where the ops know what they are doing. Interesting discussions using a unique mode of communication.
>
> Radio direction finding - A cure for insomnia in my book.

I would like to try radio-orientering, which combines cross-country running with RDF.
>

> going on in this area than any other area of hamdom.

You got THAT right!
>
> Construction activities - Now your talking! This is what I think ALL
> hams should be doing.

I agree, but it's not in the cards for most hams due to lack of interest, skill, and basic economics.

Some of us do build quite a bit, though. Complete amateur radio stations, as amateurs, with amateur resources.
>
> My point is there are so many activities because there are so many
> interests. Some of what interests you leaves me cold, and we all know

> I'm quite happy not being normal, I'll bet most other hams are too.

Do not confuse "normal" with "average" or "strange" with "unusual".
They are not the same thing. Hams are often unusual, and not average,
but most of the ones I know are quite normal people.
>
> > It is Ham Radio's loss, repelling the technically inclined in favor of Morse
> > code.
>
> I am just about 100 percent technically inclined, and I can assure you
> the two are not opposed

Let's see, I've got BSEE and MSEE, been a ham since age 13, build or
restore practically all my ham gear (including things like the tables)
and I love to use Morse code.

Does any of this absolutely prove the need for code tests? Of course
not. Nor do the oft-repeated counterarguments disprove it. Except for
the most basic testing of rules and regs, license test requirements
are purely a matter of opinion, nothing more.

The two are not opposed at all - for most people.

But consider this, Mike:

Except for a few people who learned Morse elsewhere, most would-be
hams don;t have any prior code skill. The code test acts as a sort of
Great Equalizer, because almost everyone starts out as a clueless
newbie with the mode. Morse cannot be learned by simply reading a
book, visiting some websites or picking up a little bit here and
there. You cannot cut-and-paste your way to a new skill, or rely on
your past achievements or claims to get around it.

It's a skill that is easily measured and cannot be faked. And it puts
a Final Authority wannabe on the same footing as a Young Squirt. It is
precisely this equalizing effect that makes some folks hate it so
much.

I read this several times -- I understand the words, but I don't understand what you're trying to say.

One thing I know for damned sure -- I'm against anything that has an equalizing effect! Equality breeds mediocrity. Your attention is invited to Vonnegut's "Harrison Bergeron", perhaps the most frightening story ever written.

Just that almost all prospective hams today start out at the same point wrt code skill. The Ph.D in EE has no head start on the middle schooler. They both have to start at the same place, with the same goal.

>One thing I know for damned sure -- I'm against anything that has an

That story is about equality of result being given priority over all else. Not what I'm talking about at all.

But a great story nonetheless. And, yes, very scary.

btw, your list of nonrights was right on target. I've got a "Bill of Responsibilities" that is pretty similar. Perhaps I should post it. Sample: "Your right to free speech is matched by a responsibility to tell the truth and not intentionally spread lies, rumors or propaganda."

Source record: 54886

There seems to be some dispute over the possibility of passing the Extra written in eight minutes.

The odd thing is that it is disputed by someone who has not passed said test.

I was curious about the eight minute claim, so I surfed over to AA9PW's exam practice site and took a practice Extra exam online.

To make it more of a sporting course I did not use a calculator, slide rule or pencil/pen/paper. Did what little math was required in my head.

With absolutely no preparation, I scored 94% in an elapsed time of seven minutes. And learned a few things about the rules for earth stations and RACES.

So it can be done.

It would be more meaningful to measure that logarithmically, not linearly.
A few megahertz slice of microwave allocation is generally less meaningful
than a hundred kilohertz of 20 meters. Propagation is the difference.
Also remember that things at 2300 MHz act the same as at 2310MHz,
but things at 4MHz are significantly different than at 14 MHz, though both
are separate by 10MHz. He higher frequency bands allow wider bandwidth
signals, but you are limited to line of sight above a gigahertz or so, without
the aid of a satellite. At HF, you can go around the world.
By that method, our allocations below 30 MHz are worth 0.1843, those
above 30M but below 300GHz worth 0.2502. So you need to pass
a code test to access 42% of our allocations.

Of course you can, and anyone else can also. I did not use a Calculator or anything for the Math either, actually it would have probably slowed me down. I do have to say you were faster than me, maybe if you had used the other minute you also would have scored 100%.
As I have stated before the Written is a Joke, and once the CW Test is gone the written should follow, it really serves no purpose.

Nice try, Robert. I can still turn the knob a lot more times at VHF/UHF
before rolling across signals than I can HF.

I still call it 97/3. Your mileage obviously varies, was humorous, but
not a very accurate representation.

>We're not radio spectrum vigilantes...

Guess you wouldn't call the fire department if you saw a neighbor's house on fire?

Nor would you call the police if you saw your neighbor's wife or daughter being raped?

Would you call 9-1-1 if you saw a driver swerving across the road in a school zone?

Robert, that "it's not my business" attitude is why crime is allowed to proliferate in almost every major city in the United States.

Today those GMRS radios may not be a problem to "us", but will be in the furure. Also, they ARE already becomming a problem to LEGALLY licensed GMRS users

So...At what point do YOU "nip it in the bud"...??? Or are you one of those guys who wait for "them" to do something about it...?!?!?

My Army serial number was RA16408336. Check it out at NARA anytime (National Archives and Records Administration). I was on active duty from 13 Mar 52 to 16 Feb 56, thereafter in inactive reserve until receiving an Honorable Discharge from military service in April 1960.

My longest unit assignment was with the Far East Command Signal Service Battalion, 8235th Army Unit, based in Tokyo, Japan, that battalion serving Far East Command HQ's needs in signal services. My ending rank was Sergeant (E-5, now signifying Staff Sergeant) and MOS was (under numbering system then used) 281.6, micro-wave radio relay operations and maintenance supervisor. Prior to microwave radio relay work I had a temporary MOS of Fixed Station Transmitter Operations and Supervision...transmitters site of Army station ADA had 43 HF transmitters ranging in power outputs of 1 to 40 KW.

Absolutely NONE of the above is "embellished" in any way and may be referenced for accuracy with US government documents and publications. For further reference, keep reading the Stars and Stripes military newspaper, Pacific edition, for more information scheduled some time in December, 2002.

Eugene Rosenbaum, N2JTV, served in the same Company, same Battalion, as I did and during my assignment time. He can verify the above about ADA and false allegations of "embellishments."

On 1 Jul 50, a C-54 carrying 19 members of the 8235th and 5 flight crew crashed in Korea. All aboard were killed. Men and equipment of the 8235th had been ordered to Korea to reinforce communications there in the opening weeks of the Korean War. Reference: Associated Press wire service. The billet for Hq, A, and C Companies of the 8235th, Hardy Barracks, was renamed that in honor of one of those killed, Corporal Elmer Hardy. Reference: Korean War Project website and Pacific Stars and Stripes military newspaper.

In fewer words: No one can discuss the subject of GETTING IN
amateur radio without ALREADY BEING IN. That's not free speech
or free assembly, just exclusivity and limited participation.

This newsgroup already exists, is public access, unmoderated. No
time or frequency limit exists for communications, discussion, or
participation.

>
>I agree with this statement made by lenover21@aol.com :
>Removal of the code test will result in greater freedom to get into
>amateur radio, enjoying the many non-morse-code aspects of that
>hobby.

In the general line of thought of others, as presented in messages here, they view amateur radio as a "lifestyle," an alternate reality where they can claim status, rank, and privilege through a certain license class and the "authority" to identify themselves with federally-certificated call letters. Morse code proficiency is viewed by them to be the penultimate in amateur skill achievement; why else would they mention/promote/imply the "goodness" of morse code skills? NO other radio service in the USA ranks morse code skill as the most necessary...if that radio service ever considered morse code at all (most did/do not).

>The reason license numbers did not increase with no code could be from several
>factors. Many people do not know about Ham Radio. Some people do not find
>contesting or ragchewing all that fun. Ham Radio is presented from these
>aspects, rather than radio direction finding, antenna setups, construction
>activities. Even if they are not EEs, people like activities where they
>interact with. Lastly, some people may find Hams strange. All of this has
>nothing to do with code. Eliminating code requirement WILL help the numbers.

A few, such as myself, do not see any reason for retention of the standards and practices of the 1930s to be continued into this new millenium. Morse code skill is one of those old standards and practices. Morse code is still required as a separate pass-fail test element for below-30-MHz privileges even if the FCC does not mandate code use over and above any other mode/modulation.

>It is Ham Radio's loss, repelling the technically inclined in favor of Morse
>code.

Those who prize titles, rank, status and had passed morse code tests in the past will not give up their indicator of "superiority." They want, perhaps need, the title, rank, etc., to maintain their self-image. Such seems of paramount importance to them and removal of an indicator of "superiority" for others means they cannot use a federally-certified title, callsign, or ranking to hold against others. Those have absolutely no regard for others who might enter amateur radio later...they must "reign" now.

>Not only is Ham a hobby, it is also a service. As a service, it matters that
>the license classes mean something. Also, pride in the hobby, should make the
>license and other certificates such as antenna modeling, emergency
>communications, should be very meaningful.

The word "service" throughout Title 47 CFR, all Parts, is a regulatory term denoting a type and kind of radio activity.

License classes had evolved, by political lobbying activities, into a six-class, rank-status-privilege federal certificate program by the time of 1998 and NPRM 98-143. As a result there was a definite class-distinction environment already developed in the US amateur radio community. The FCC was aware of that, many others involved in radio had seen it. To some degree the ARRL supported it since most of the political lobbying for the changes in amateur regulations had come from the ARRL. The ARRL's input seems to have supported the long-time membership who also favored morse code use; to them it was unthinkable to change entry standards that existed when the old-timers first entered amateur radio.

"Pride in a hobby" need not be codified into law. The FCC is tasked only in regulating US civil radio. The FCC is not tasked to support amateur radio over and above any other radio service, nor is it an academic institution "grading" proficiency by issuing "certificates of achievement." The FCC uses licensing as one tool (of many) in the regulatory task.

"Pride in a hobby" or any other activity, for that matter, is a subjective condition. Each person has individual and unique feelings about their activity. "Pride" can be bolstered and even directed by membership organizations. It does not have to be supported by law to exist...and that is where many seem to be confused, mistaking their own efforts to meet the law as it was in their youth to what others have to meet now or in the future. No one person's "pride" is a model for all others to follow.

An amateur radio license, any class, is simply a permission to operate in allocated US amateur radio bands under conditions regulated in Part 97, Title 47 CFR, granted by the FCC. It is no more than that, not a "degree," not an academic achievement, nothing but a permission to operate. A license has never been anything else but a permission, a grant, even with the three US radio regulating agencies existing before the FCC was created by the Communications Act of 1934.

Many others have USED an amateur radio license for a "greater"
purpose, far exaggerating its importance. That is their problem,
not the government's problem or anyone else's.

Southern California. If you need my mailing address, it is in all
bylines of articles I wrote in Ham Radio Magazine in the 1980s.
That's still my mailing address.

> Perhaps another ham here can help.
>
> I don't know if you have any suggestions on a different way we can all
>get together, but if you do, let's hear them.

I thought that was clearly obvious. THIS newsgroup already exists,
is public-access to anyone with a computer, modem, and an ISP
account. No amateur radio license required, no code test
required.

It would appear your vexation is simply a well-disguised need for
exclusivity...as if the only persons who can discuss GETTING IN
amateur radio are those ALREADY licensed. If so, please
contact the FCC and ask for an NPRM to have that exclusivity
installed in Part 97, Title 47 CFR.

>who also meet on rrap is puzzling. We promise not to talk in secret codes
>(the QRG chosen is voice) to hide our nefarious ideas.

You are correct in that an amateur radio network is open to
public view. You are incorrect in such definitions of extending
to free speech through full participation...in order to participate
in this net one has to already be IN amateur radio.

"Third party (meaning unlicensed in amateur radio)" comments
will seldom be acceptible to a nearly-all already-licensed group,
will they? Few in here accept such.

Morse code testing primarily affects those NOT in amateur
radio. Restricting participation in a forum of those ALREADY
IN amateur radio is simply elitist or exclusionary. An Internet
newsgroup is already established for public access. There is
little common sense in "requiring" another forum which is not
nearly so public.

>subject to me at least. Now if we wanted to discuss the post CW world
>for amateurs, that might be worthwhile.

Those who find certain topics "boring" should simply skip over
those topics.

This particular newsgroup was created to discuss the code test
issue.

> As for Mr Anderson's arguments about elimination of CW, sure, they are
>pretty fair arguments. But they are put together in a way that is not
>going to win many converts. But then, I doubt that is the purpose.

Mr. Anderson is not in the public relations field. Is Mr. Coslo in
that field? :-)

As to things "put together in a way not to win many converts," I
suggest a perusal of the past year's comments from Mr. Robeson,
Mr. Carroll, Mr. Heil, plus a few from Mr. Brakob. Those are FAR
more in the "not to win any converts" (to their side) than any of
mine. See continuing tag phrases of "putz," "creep" and so forth.

> But then, IIR, he believes that manners are a sign of weakness.

No. CAPITULATION to the viewpoints of others IS a sign of
weakness.

Debate on issues, any issue, can be done "mannerly" but it is a
mistake or a deliberate misdirection of alleged intent to claim that

strong non-support of your personal viewpoints is "ill-mannered."

Strong debate is simply strong debate. Some cannot take such
things...and those people should leave lest they upset themselves.

Nope, nothing to get wound up about, Hans. I understand Jim well. I'm definitely not stupid, and yet for a variety of reasons, Morse code was a real problem for me. It put me on equal ground with those who may have had troubles with the written exam, which wasn't hard at all. (for me)

> time or frequency limit exists for communications, discussion, or
> participation.

So do the spectrum allocations and reception techniques used in Amateur
Radio.

Anyone may listen to the conversations. Even you, Your Putziness.

Anyone who cares to participate may do so without fear of restriction or
exclusion. Just take the test like millions of Americans have done in the last
80 years.

Invitations have been extended to those who do not posses a license to
join in. Lennie, you frequently try to "make hay" oof the fact taht you have
"good friends" who are licensed. So...Ask them.

Or are you afraid that one of us might suggest to them that they review
this forum and see how you REALLY behave...???

Otherwise....

booo hooo hooo

>I thought that was clearly obvious. THIS newsgroup already exists,
> is public-access to anyone with a computer, modem, and an ISP
> account. No amateur radio license required, no code test
> required.

However it DOES require the possession of a computer ($500+ for a computer of adequate service), modem (another $25-50) and a subscription to an ISP to get here. (Another $9.95 to $20+ and more, depending on dial-up, DSL or satellite)

Therefore it is not nearly as "unrestricted" as you'd have it believed.

Therefore, since there MIGHT be an underpriviledged person with an interest in "getting into" Amateur Radio that cannot otherwise participate in this forum, I suggest that ALL discussions regarding "getting into" Amateur Radio be restricted TO Amateur Radio.

A quick trip to Wal-Mart reveals several "portable" radios with HF coverage, one of which has CW/SSB capability for under $110.

Stations participating in the "How To Get Into Amateur Radio" roundtable will, alternatively, announce the ARRL's address and their 800 numbers, thereby making it "free", to less that 40 cents in postage for any motivated respondant.

No reference to Lennie the Loser necessary.

>If so, please

>> I am sure they'd second guess the company they were keeping if they
>knew
>>how you've tried to "embellish" your military career in this forum.
>
> My Army serial number was....(SNIP)

Your Army number, status as voluntary enlistee, dates of active or reserve service or rank on final disposition have NOTHING to do with your attempts to embellish the character of your service by associating yourself with Soldiers who died in battle.

They also have NOTHING to do with Amateur Radio POLICY. Your tenure as a radio clerk at ADA has NOTHING to do with Amateur Radio POLICY.

>My longest unit assignment was...(SNIP)

Absolutely irrelevent to the subject of this forum...Amateur Radio POLICY.

>Absolutely NONE of the above is "embellished" in any way and...(SNIP)

...and has nothing to do with previous attempts by you, in this forum, to associate yourself with those who fell in battle.

>Eugene Rosenbaum, N2JTV...(SNIP)

Yes, yes, yes, Lennie...one of your "token" Amateur Radio buddies.

>He can verify the above about ADA and false allegations of "embellishments"

The embellishments occured in this forum...NOT in Korea. It occured with your cowardly attempts to "impress" the veterans in this forum by hoping no one caught the time line disparity between the events of active combat in Korea and when you actually arrived in-theater.

>On 1 Jul 50, a C-54 carrying 19 members of the 8235th and 5 flight
>crew crashed in Korea. All aboard were killed....(SNIP)

A tragedy, to be sure, but again, ABSOLUTELY IRRELEVENT to any Amateur Radio POLICY discussion in this forum, and ABSOLUTELY IRRELEVENT as it pertains to YOUR service.

Your broaching of the events is nothing more than an attempt by you to embellish your military service. You were a rear area radio clerk...nothing else.

YOU WERE NOT THERE when those Soldiers died.

>Shove it, sweetums.

Right up your lying kazoo, Lennie...With enthusiasm.

And you're STILL a putz.

It's obvious that they're bitter, old men who don't care about their
behavior, or how others see them. Yet, they expect people to care about what
they have to say. The word "credibility" is not in their vocabulary.

> license class and the "authority" to identify themselves with
> federally-certificated call letters.

Federally ISSUED call letters, Lennie. Care for one of your own? You can have it, you know...

Or better yet, why not send $10 (or is it more...?) to "CRB Research" as seen in "Popular Communicaitons" and other radiocommunications related magazines, and they will neatly emboss your name and "Registered Monitor Station" "callsign"..then YOU can have your "call" too, Lennie...

You might even sneak it by DMV and get it on your car tags...Although I am sure you could have it put on almost any other of California's plethora of "vanity" tags.

>A few, such as myself, do not see any reason for retention of the
> standards and practices of the 1930s to be continued into this new
> millenium.

Already "argued" and put to bed by all EXCEPT Lennie. The FCC has already said it's piece on the matter, and when no longer bound by treaties to which the United States is signatory, will revisit the issue.

Until then it's all Lennie has left in life...that last great windmill to tilt at before his day is done.

>They want, perhaps need, the title, rank, etc., to maintain their
>self-image.

This from a guy who feels it necessary to append his 1950's era Army service number to his "signature" in an Amateur Radio related forum.

>The word "service" throughout Title 47 CFR, all Parts, is a regulatory
> term denoting a type and kind of radio activity.

And the FCC has specified in 47CFR97.1 what SERVICE it expects to reap from the Amateur Service.

>Many others have USED an amateur radio license for a "greater"
> purpose, far exaggerating its importance. That is their problem,
> not the government's problem or anyone else's

The greater purpose is hardly "exaggerat(ed)". It's well chronicled and archived. Sorry this ruins yor rants, Your Lyingness.

Putz.

Is being in public relations a prerequisite for manners? No, I'm not specifically in the Public relations field. But I've been the president of a youth sports group, Vice president of an astronomy group, Captain of my Ice hockey team, and an active member of my local amateur radio club. My point? I can get things done without being rude and abrasive. Most of these folk don't suggest I get psychological help either.

Strong non-support, I can handle. Your mode of operation is not merely strong non support though. It is antagonistic to a pretty fair degree. It's okay though, if you really want to take that style. I have had to deal with a few of those type (mainly in the sports league). It's sad, because they never could figure out why they received no support for their cause.

> Strong debate is simply strong debate. Some cannot take such

From: lenover21@aol.com
>>In the general line of thought of others, as presented in messages
>> here, they view amateur radio as a "lifestyle,"...SNIP

Ham Radio is a "lifestyle", in my opinion also. There is a commonality that goes beyond amateur radio. One is use of the word "Ham", another is hatred of CB (Ham retailers provide crystals in a continuous range, except the 27MHz value is missing!). There are many more examples of "Ham" radio culture.

. >> ...an alternate reality
>> where they can claim status, rank, and privilege through a certain
>> license class and the "authority" to identify themselves with
>> federally-certificated call letters.
These are call call signs. You make them sound evil ("alternate reality"). Its what Hams make of it that it becomes an alternate reality..

>Or better yet, why not send $10 (or is it more...?) to "CRB Research" as
>seen in "Popular Communicaitons" and other radiocommunications related
>magazines, and they will neatly emboss your name and "Registered Monitor
>Station" "callsign".
Only an obcessed Ham would do that.

>You might even sneak it by DMV and get it on your car tags...Although I am
>sure you could have it put on almost any other of California's plethora of
>"vanity" tags.
Only an obcessed Ham would do that. I have seen call signs on licence plates.

>The FCC has already
>said it's piece on the matter, and when no longer bound by treaties to which
>the United States is signatory, will revisit the issue.
You know thats not true.Hams will fight for Morse Code long after the FCC lifts it.

>>They want, perhaps need, the title, rank, etc., to maintain their
>>self-image.
Actually they want to mislead by tying the rankings to Morse code.

>>Many others have USED an amateur radio license for a "greater"
>> purpose, far exaggerating its importance.
What is the "greater" purpose. To have more radio toys to play with?

>As I have stated before the Written is a Joke, and once the CW Test is gone
>the written should follow, it really serves no purpose.

I don't feel CW should be mandatory. Certainly the technical license classes should not be tied to learning CW.

Anyone can pass any license class in a day or two of memorizing the license pool questions. The subject material is very good and relevant - IF one learns the material.

The test and license preparation classes should be changed to learn the material, not just memorize the answers.

>do you...." in my own current field of employment.

Ryan:

The "I had to do it, so do you" argument is a construct of the NCTA --
it has never been the position of the PCTA, myself in particular. I have
consistently supported code testing on the basis of the need to preserve
the capability to exploit the many benefits and advantages of the Morse/
CW mode among amateur radio operators. However, the "I had to do
it, so do you" argument is based on the much denied, but real truth of
their own motivation -- laziness, and a desire for an easy way "in" to
the ARS and high-power, HF phone privileges.

>In the meantime... if the requirements dictate a certain action.... I will
>comply with that, even if I don't agree with it, to gain the privileges that
>go along with it.

If only everyone else held this attitude, the ARS could have been
spared it's ugliest, most controversial debate -- and we'd still have
reasonable and purposeful licensing requirements.

>of rec.radio.amateur.antenna.

Etc.

In fact, if we follow that reasoning to its logical conclusion, we see that it's elitist and exclusionary for hams to talk about any subject at all on the air, because not everyone has an amateur license.

And even if all license requirements are dropped, it will still be elitist and exclusionary against those who don't have ham radio equipment, or antennas, or who cannot be on the air when a discussion is scheduled.

Horrors!

>them to be graded ;)

I don't know how long it took me back in 1970, when I took the Extra at the age of 16. Summer between sophomore and junior years of high school, hot muggy subway ride, yada yada yada.

Back then you could not do it all at once - you needed at least two years' experience as a General, Conditional or Advanced before they'd even let you near the Extra.

I didn't use a slide rule back then because I didn't have one, and the math was simple enough not to need it. One of the tricks of solving multiguess questions is that it's sometimes easier to work backwards from the answer than to derive the answer "forwards". Another trick is knowing certain basic formulas, like

LC = 25,330/F^2

(L in uH, C in uuF, F in MHz)

eliminates the need to do square roots in order to figure out most resonance problems.

Surf on over to AA9PW's site and see how you do.

But heck, seven minutes is a long time compared to the code test, which only took 5 minutes....

Did anyone get on the air? Heard nothing here in NNJ. Called CQ a few
times too. Nothing. Not suprising, as propagation on 10 at 10PM is
usually poor. I have seen band openings on 10 after 10PM, but that is
rare.

Short band toward the east. Worked one guy in Madison, WI (about 350 miles)
who wanted to know what a "wrap" was! Conditions toward the west were
better, but not great. I could just barely hear the W6WX ncdxf beacon.
Antenna is TH7 at 65 feet.

Let's try Saturday at 1700 UTC (12Noon EST, 11AM CST, etc.), same QRG.

I understand your view on testing, Larry, and I don't disagree with it
though we know that those days are never coming back. I wrote of your
position--and you may correct me if I understood it incorrectly--that
you are not a "phone man" except for the occasional use of 2m FM.

You've discussed GETTING IN without ALREADY BEING IN. You've discussed,
dismissed and shown rudeness to anyone not sharing your view of amateur
radio utopia. That, by God, is free speech. Convincing others to share
your views has not been your long suit.

> This newsgroup already exists, is public access, unmoderated. No
> time or frequency limit exists for communications, discussion, or

You'll forgive radio amateurs if they wish to discuss policy on the
amateur bands, wont' you, Len? I know of nothing which states that you
must be included. You could have been a participant in amateur radio
for decades but for inertia.

What precludes licensed radio amateurs from getting on the air and discussing policy without consulting or including you? After all, we can always leave you a message here or just look up your address in an old copy of the now-defunt Ham Radio magazine if something should come up where your expert guidance is necessary.

You see, Mike, Lennie LOVES to bash Amateurs over a perceived lack of desire to evolve, yet Lennie is the first one to steadfastly try and hold the conversations STRICTLY to the Morse Code issue.

It irks the Dickens out of him that Hams have OTHER issues they want to discuss.

>>As to things "put together in a way not to win many converts," I

I have already "won" my share of "converts" having successfully taught numerous Amateur Radio licensing classes and proctored many more VE tests. Lennie has yet to produce the name of ONE person he's helped become licensed, himself included.

As for calling Lennie "names", what have I called him that he's not manifested in his behaviour?

No, it's not a "position," its the underlying theme for every word
that comes out of DICK's mout and yours.

I have
> consistently supported code testing on the basis of the need to preserve

> reasonable and purposeful licensing requirements.

If only the ARS had been spared you, Larry. Just as you didn't follow
your father in his career, we'll not necessarily follow Hiram in his
semi-professional amateur career.

Jim, don't be silly. I passed the Extra exam. I've even told you
that right here on rrap. I can only imagine why you wouldn't remember
something like that? Except it doesn't open you argument well, or its
just another PCTA double standard.

Advanced Bruce claims to have done it in 8 minutes, no studying, and
100% score. All on a whim. And took $250 away from two "CB
Plussers."

> So it can be done.

You didn't score 100%.

> 73 de Jim, N2EY

Jim, your postings on rrap do not imply that you are a functional
illiterate, unless you've had your spouse post for you all these
years.

Bruce on the other hand, could not have read the questions in 8
minutes, let alone do the math and answer them.

Kellie, precisely? Is that what you want? You want precision?

The excluding mechanism is called "Moderate."

The group has talked of going moderated and excluding non-amateurs.

Is that precise enough for you? Would THAT exclude Len?

You can't remember what you say from one day to the next, only as long
as you get your jabs in at me.

Bruce, comments on your spelling ARE in context, as you constantly refer to other amateurs as dumbed down "CB Plussers" and how the written exams are a joke.

Then, you claim to have read all the questions on an Extra exam, did the math, circle the right answer, and score 100%. All in 8 minutes, on a whim, without ever studying, and take $250 away from a couple of stupid "CB Plussers."

Yes, we would be dumb if we believed that.

Maybe in your own mind you are testing the rest of us. If we believed your "story" you could then exclaim that we really are dumb.

Went in a CB shop Monday. Lots of 100+ watt rigs for sale many
of them on display tuned to frequencies in the 10M band. No
surprise except for the arrogance. Took a bunch of digital
pictures to forward to the FCC field office. I don't suppose
it will do any good but I did my part.

Thanks for the kind words, Dave. But my group (Jug Southgate's Bunch) didn't do
nearly so well as you and your buddy. But we did OK for a couple of
battery-powered 5 watt rigs, a homebrew dipole and trap vertical. Learned a
lot, too. See QST for June, 1994, for a story about one of our Field Days some
years ago.

Try the online practice exams and see how ya do. almost as much fun as a
contest!

Oh, no argument there, Steve. It's just a matter of personal style. My tendencies are to keep it real civil. And I honed it keeping "sports parents" in line. (not an easy task - many sports parents make some people here look like Mother Theresa) 8^)

Careful, Steve! English is a second language to most of us here in West Virginia too. Short quiz:

Q What do you call a person who speaks three languages?

A Trilingual

Q What do you call a person who speaks two languages?

A Bilingual

Q What do you call a person who speaks only one language?

A An American

>
Let's look at this logically, shall we?

First off, the test in question is the current Extra written test, Element 4.
50 multiple choice questions, you need 37 correct to pass.

WA8ULX claims to have taken it in 8 minutes, gotten 100% and collected some bet
money. FCC database says he is an Extra, and his license was last modified 30
June 2000.

I was able to get a 94% grade on a practice test in seven minutes, so it IS
possible for someone with some radio knowledge to pass Element 4 in a short
time period.

I wasn't at WA8ULX's VE session back in 2000, but there is nothing impossible
or contradictory in his claim. His frequent spelling and grammatical mistakes
in postings, and his rather raw way of expressing himself here have little
bearing on his ability to pass the Extra written. The FCC tests for amateur
radio licenses do not test expressive language, spelling or grammar skills.

N0IMD claims to have "passed the Extra test", but the FCC database says he
holds a General class license, last modified 23 January 2002. So if he has

indeed passed Element 4, it has not been processed.

There is no contradiction in WA8ULX's claims, but there IS an apparent contradiction in N0IMD's claims. Why should a reasonable, unbiased person reject the claims of WA8ULX and accept the claim of N0IMD, given the FCC database and other information?

If N0IMD is referring to old Element 4B, that is not the test under discussion in this thread. And there is no direct external evidence that N0IMD ever passed that element.

If anyone is "being silly", it's not me. If N0IMD has actually passed the test under discussion (Element 4), the FCC database should reflect it.

Before April 15, 2000, "the Extra test" included both a 20 wpm code test (or waiver), and old Element 4B.

So here's a straight question:

Has N0IMD passed Element 4 at a VE session?

Yes or no?

What
> law do you think was being broken? Reality Check indeed.............

Once again (and I cannot grasp why this is SO hard to understand), any radio
sold in the USA
actually has 2 (that's T W O) kinds of approval for sale; 1) FCC approval
to be sold stating that
the equipment in question meets FCC specifications for use in the intended
service. It applies to
commercially manufactured radios. 2) FCC certification for use in any
service other than Amateur.
Now, what that means is that, even though a radio MAY be intended for sale
by a manufacturer in
the Amateur Service, it STILL must be approved by FCC according to certain
criteria set up by FCC's own labs. Any OTHER radio marketed to OTHER
services must be FCC-approved, and
as a proof of said sale authority, have a sticker so stating that (para)
"This device meets all FCC re-
quirements for spectral purity according to Part XXX, Title 47, US
Code........................." Those
Galaxy, Connex, Magnum so-called "10 Meter" trash has NO such authority, no
such sticker, and
appear on a list of equipment (which I will once again post here in the
faint hope that you might grasp the reasons why said equipment cannot be
legally sold in the US) that has been determined by FCC's test labs NOT to
meet one or more of their test criteria. Without that approval, FCC can
most certainly raid, seize, and fine outlets that sell such equipment. Like
you, tools, some of those outlets themselves believe they have a "right" to
import and sell such junk, but they don't. It
is only a matter of time before the sh** hits the fan. ....and I
can't wait! Hehe!

BTW, today I was listening to 28.085 and it sounded just LIKE CB 19 complete
with echos, squeaks, and some driver saying F*** every other word describing
his dispatcher while sounding like he was talking down a drain pipe. Back
soon with the complete list.

Since the other thread has gone through the usual rrap muation, I didn't want to see the topic go away.

Sooo, we probably really do want to move the frequency down some. Last night, I could hear some really weak signals, that's about it.

I'm good for just about any hf frequency, dare I even suggest... 75 meters? 40 would be fine also. Saturday daytime isn't too good for me, so 20 meters would be marginal.

Any thoughts?

- Mike KB3EIA -

> What
> > law do you think was being broken? Reality Check indeed.....

This is the "law" that is broken by the sale of uncertified/approved
equipment.

It comes direct from FCC's web site.

ILLEGAL CB TRANSCEIVER LIST The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well. As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Council has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999). Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. • 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have

determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. ? 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. ?? 95.603(c); 2.803. Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a) states: "..([CB] Transmitters with frequency capability for the Amateur Radio Services . will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and thereby deter use by CB operators of frequencies allocated for amateur radio use. In addition, the Commission's equipment authorization experts have determined that these devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. ? 95.639. In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future. LIST OF TRANSCEIVERS ILLEGAL TO IMPORT OR MARKET GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800 MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX NORTH STAR - models: NS-3000 and NS-9000 PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln PRO STAR - model: 240 RANGER - models: AR-3500 and RCI-2950 TEK - model: HR-3950 UNIDEN - models: HR-2510 and HR-2600 SUPER STAR - model: 121 For further information concerning the listed transceivers or similar models, contact Ray LaForge or Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, MD 21046, (301) 362-3041 or (301) 362-3043 respectively, or E-mail: rlaforge@fcc.gov

As far as the written test is concerned, the content of the questions is left up to the VEC Question Pool Committee. The VEC are made up entirely of already-licensed amateurs.

Just the same, the FCC is not an academic institution and does not presume to "certify technical competence" in radio through any written test. The FCC uses licensing and license testing as one tool of regulating civil radio use in the USA in regards to US radio operators.

Since the FCC does not mandate OOK CW over any other mode/modulation by any licensed radio amateur, any class, there is little logic in a national requirement for an International Morse Code separate test. The only reason the test exists at all is ITU-R Recommendation S25.5.

It is up to individual private organizations to set up teaching courses in radio and electronics for radio amateurs. Of course, a private non-academic organization cannot grant pretty certificates to hang on a wall to show off to others or fancy after-the-name initials or callsigns used in place of titles of nobility. :-)

The Class Distinction between "coders" and "no-coders" is firmly
established in US amateur radio. The snide, sarcastic, and insulting
commentary against "no-coders" will continue until the code key is
removed from the last, cold "coder's" fist.

> Is being in public relations a prerequisite for manners? No, I'm not

>of my Ice hockey team, and an active member of my local amateur radio
>club. My point? I can get things done without being rude and abrasive.
>Most of these folk don't suggest I get psychological help either.

Well, perhaps they should? An obsession with titles, rank, and
privilege is not normal behavior. Or is it?

So, in your quest for "good manners," what are you disguising?
Is it a need to parrot the morals-manners as eschewed in monthly
issues of QST? Is it a firm, undying Belief in the inherent "goodness"
of morse code for radio amateurs? Is it a necessity to continue the
standards and practices of radio of a half century ago far into the
future while the rest of the radio world progresses continually?

I see no critique of the rather obvious ill-mannered abrasiveness of
others in this newsgroup-chatroom. Such is done on a regular basis
by licensed radio amateurs. Does the amateur license permit a

double standard of behavior in a public communications venue?
Apparently it does yet such is not in the radio rules.

> I think I've commented on my disagreement with them in calling you
>names.

...and what has such "comment" accomplished? They continue,
unremitting. :-)

Yet, you seek a long "discussion" with me on charges of "ill-mannered
behavior" without pointing out specifics. What you seem to be doing
is simply an attempt to silence an unlicensed-in-the-amateur-service
citizens because their viewpoints are contrary to yours.

> Strong non-support, I can handle. Your mode of operation is not merely
>strong non support though.

I do not - absolutely - support a morse code test for any amateur radio
license.

>It is antagonistic to a pretty fair degree.

To those who have an almost religious fervor on keeping the
standards and practices of over a half century ago in a hobby
activity I am absolutely convinced that I appear "antagonistic."

To those who wish to "rule" on opinions by their own personal
desires-standards, I am absolutely convinced that I appear
"antagonistic."

Individuals of those two stated groups have replied in OVERLY
ANTAGONISTIC commentary through personal insults, false
statements, etc. Those are condoned. Interesting. Double-
standard, etc.

>It's okay though, if you really want to take that style.

You would prefer that all be "Mr. Nice" and agree with your
viewpoints, yes?

>I have had to deal with a few of those type (mainly in the sports league).

Had you been IN a military service, you would have learned that
"being nice" does not coincide with any military mission, either.
For that matter, team sports (a civil surrogate for warfare) is not
conducive to "being nice."

> It's sad,
>because they never could figure out why they received no support for
>their cause.

Nice try. :-)

It's too bad that so many long-time "coders" continue to demand that
amateur radio standards and practices remain frozen in the state

they were in when they were first licensed in their youth. They insist
that "their way" is the only one and are outraged that younger people
do not see the future with their "clarity of vision" (that actually suffers
a great deal of mental astigmatism). Not only that, they feel the
"right" to insult all those that do not see things their way. Sad, yes.

>> Strong debate is simply strong debate. Some cannot take such
>> things...and those people should leave lest they upset themselves.
>
> Aww, suggesting I "leave" now?

Your choice. It's always been an option.

Feel free to accept things as they are now forever and ever if you wish.
Feel free to support the status quo and everyone thinking-believing
alike. There is comfort in such sameness...and in taking moral-
ethical edicts from a certain membership organization on what to like
and what not to like. All marching to the same drumbeat is very
uniform, safe, secure.

Free speech on an EXISTING INTERNET NEWSGROUP, yes.

Such free speech has been met by some, like yourself, trying to
control content through ill-mannered sarcasm and general
bullying whenever opinions are contrary to your personal views.

>> This newsgroup already exists, is public access, unmoderated. No
>> time or frequency limit exists for communications, discussion, or
>> participation.
>

>You'll forgive radio amateurs if they wish to discuss policy on the
>amateur bands, wont' you, Len?

No problem if those policy matters affect ONLY those who are
already licensed.

FCC regulations apply to ALL CITIZENS whether they are licensed
or unlicensed in a particular radio service. FCC has been like that
ever since 1934.

The FCC is not like the State Department.

>I know of nothing which states that you must be included.

I know of nothing which states Dave Heil must be Ruler or
Chief Spokesman for US amateur radio, either. Why do you
assume that role?

>You could have been a participant in amateur radio
>for decades but for inertia.

Now, now, you displayed bad manners again. Mr. Coslo will
not be pleased.

I chose a career involving professional radio, mostly in a civilian
life with private corporations...not as a functionary in some third-
world US embassy.

Please continue to act out the stereotypical "ugly American."
That won't endear you to ARRL public relations, but I'm sure it
makes you happy.

>>
>> Dan/W4NTI
>
>...and what does the FCC have to say about the matter? Do you have an answer
>to that, or do you just have more personal delusions about what the license
>requirements really are?

It looks like Dan is caught trying to rationalize what he wrote in a fit
of the angries as well as defending his long tenure in amateurism.

In many of the 2600+ Comments on NPRM 98-143, "tenure" and "long
experience in ham radio" were considered Very Significant to the
licensed Commenters. Apparently such consider amateur radio to be
a guild, craft, or union where rank-status-privilege is qualified by tenure
and seniority. Judging by the statements in the final Restructuring
R&O, the FCC was basing its decisions on the present and the future
instead of holding onto the standards and practices of a half century
ago.

No problem. Send me round-trip air fare and a check to cover
food and lodging (one day) in PA from Los Angeles and I will
use that microphone. :-)

>These are call call signs. You make them sound evil ("alternate reality").
>Its what Hams make of it that it becomes an alternate reality..

Very true. The federal merit badge is used as an academic title after a signed name. It's part of the human fascination with rank, titles, status to proclaim their greater wonderfulness over others. :-)

>>Or better yet, why not send $10 (or is it more...?) to "CRB Research" as
>>seen in "Popular Communicaitons" and other radiocommunications related
>>magazines, and they will neatly emboss your name and "Registered Monitor
>>Station" "callsign".

>Only an obcessed Ham would do that.

A lot more have fallen for that and it doesn't have to be a "ham."

That's just an organization trying to make extra money hiring a company (also wanting to make money) to do that service. It falls into the fantasy and fascination with titles.

>>You might even sneak it by DMV and get it on your car tags...Although I am
>>sure you could have it put on almost any other of California's plethora of
>>"vanity" tags.

>Only an obcessed Ham would do that. I have seen call signs on licence plates.

I don't see anything wrong with call signs on a vehicle license plate...unless the driver wants to communicate with the horn beeping out morse code nastygrams. :-)

>>The FCC has already
>>said it's piece on the matter, and when no longer bound by treaties to which
>>the United States is signatory, will revisit the issue.

>You know thats not true.Hams will fight for Morse Code long after the FCC
>lifts it.

The real, tangible Class Distinction of "coders" versus "no-coders"
has been firmly established in US amateur radio. It's all a part of
the rank/status/title thing of those who made it using morse showing
they are "superior" to those who don't care for morse code.

>>>They want, perhaps need, the title, rank, etc., to maintain their
>>>self-image.

>Actually they want to mislead by tying the rankings to Morse code.

Yes. It is an accomplishment...but also a virtual mountain made
out of a large molehill. Rather than shovel real dirt about radio
theory and get dirty in the learning process, they wave their morse
shovels around and demand others shoveling snit like they did.

>>>Many others have USED an amateur radio license for a "greater"
>>> purpose, far exaggerating its importance.

>What is the "greater" purpose. To have more radio toys to play with?

Self-importance...or a fantasy that time stood still a half century
ago so that the standards and practices of radio of back then is
still the thing. It isn't. Ego won't let them say otherwise.

Several, in fact. There's a whole "boatanchor ring" organized.

Those newsgroups and nets don't use radio as a primary medium,
do they? :-)

>....there already is an internet newsgroup for DX -- so it is simply elitist

No need. I'm the one who makes his punch and keeps it sharp.
:-)

THIS chatroom already exists and could be used for policy
discussions on amateur radio regulations. Too bad it isn't. It
seems to consist of a lot of repressed testosterone tainted
terrible temper tantrums exhibited by those who are outraged
that no one follows their Sacred Words of (ancient) Wisdom.

>
> Any thoughts?
>
The main reason for using 10 'phone is to include Tech Pluses and Novices, and to use a mode most hams are skilled in. Propagation being what it is. 10 would almost have to be a daytime operation.

For evening use, 40 would be best, except for the megawatt SWBC signals.

20 meters, early in the evening, is probably the best option. But it still excludes Novices and Tech Pluses. And those without licenses, rigs, antennas, free time, etc.

Historically, what worked the best was 40 CW. EPA to 6 land and everywhere in between.

Mike,

It's only frustrating if you take it seriously. Or keep responding to it.

There are folks here who are quite capable of having a well-mannered, cilvil discussion. Like Bill Sohl, K2UNK. He and I disagree about almost everyhting wrt amateur radio testing - particularly code testing. So do many others. Yet it's all done in a well-mannered fashion. One can respect him and still disagree.

Ask yourself this:

If you were traveling around the country, and had some free time, who on this NG would you make an effort to meet in person? And who would you make an effort to avoid meeting in person?

Yes this is not a amateur band. It is intitled rec.radio.amateur.policy.
Thus it is about amateur radio policy.

I don't give a rip what the FCC says about the matter. The point is Im
right. And you know it.

And proof once again that Lennie's "I am not against code use, just code testing" rhetoric is exactly that...rhetoric.

>Well, perhaps they should? An obsession with titles, rank, and
> privilege is not normal behavior. Or is it?

from the same guy who winces at being called a "technician", or who regularly appends his 1950's era Army rank and service number to his signature line. Whooya! Lennie's on a roll tonight, folks.

>>I think I've commented on my disagreement with them in calling you
>>names.
>
>...and what has such "comment" accomplished? They continue,
> unremitting.

Quit being a putz and I will quit calling you a putz. Stop lying and I will stop calling you a liar. Stop making accusations of dishonesty where no dishonesty exisits and MAYBE you'll be treated like "one of the guys".

> What you seem to be doing
> is simply an attempt to silence an unlicensed-in-the-amateur-service
> citizens because their viewpoints are contrary to yours.

"I want to see an end to code testing" is an opinion.

"The ARRL is dishonest" is a blatant lie, one of numerous lie's promulgated by you. That is NOT a "viewpoint".

>To those who have an almost religious fervor on keeping the
> standards and practices of over a half century ago in a hobby
> activity I am absolutely convinced that I appear "antagonistic."

With two exceptions, every Extra Class licensee in this forum has supported the phase out of Morse Code testing in one manner or another.

Lennie does not acknowledge this as it would put an end to his "rationale" for being here.

Your antagonism is directly related to your use of insensitive and caustic adjectives used to describe anyone who does not support YOUR opinions (which from your behaviour is just about everyone).

You'd actually have no way of knowing if your claim is valid or not. I certainly do not discriminate in any way toward those hams who have not passed a morse test. I chat with a number of them on local repeaters several evenings each week. The issue of code rarely comes up unless one of them happens to comment on a discussion of contacts made on HF. Usually the comment takes the form of "one of these days..." or "I'm going to take my code test...".

> > Is being in public relations a prerequisite for manners? No, I'm not

Even relative newcomers to the newsgroup find you antagonistic.

> To those who wish to "rule" on opinions by their own personal
> desires-standards, I am absolutely convinced that I appear
> "antagonistic."

You mean that I should give up my ideas and go with the view of someone
not involved in amateur radio?

> Individuals of those two stated groups have replied in OVERLY
> ANTAGONISTIC commentary through personal insults, false
> statements, etc. Those are condoned. Interesting. Double-
> standard, etc.

What do you call your OVERLY ANTAGONISTIC insults, false statements,
cute Nazi names and diminuitives? Under what standard do they fall?

> You would prefer that all be "Mr. Nice" and agree with your
> viewpoints, yes?

That's what you want the rest of us to do. Is this a one-way street?

> >I have had to deal with a few of those type (mainly in the sports league).

At ease, Len. This isn't a military operation. You're off duty now.

> It's too bad that so many long-time "coders" continue to demand that

That's why NPRs are released for public comment before they are implemented.
The best argument wins. If you knew anything about how rules are
implemented, you'd understand how stupid your statement is.

> I know of nothing which states Dave Heil must be Ruler or
> Chief Spokesman for US amateur radio, either. Why do you
> assume that role?

I can speak of policy matters, my new rig or gardening on the ham bands
using the mode of my choice and there is absolutely nothing you can do
about it. Any licensed ham can do so. You aren't licensed? Tough!

> >You could have been a participant in amateur radio

> world US embassy.

At least Dave Heil's name is KNOWN to others, Lennie. What did Lennie Anderson do in HIS life to gain acknowledgement? Penned a few dubiously original articles in a now defunct Amateur Radio magazine?

>Please continue to act out the stereotypical "ugly American."
> That won't endear you to ARRL public relations, but I'm sure it
> makes you happy.

I bet it's far less aggrevious to ARRL than being called dishonest by a creep who won't pony-up the "evidence" of such dishonesty.

"Jerry Oxendine" <joxendi@bellsouth.net> wrote in message
news:c0SA9.16347$wO4.6939@news.bellsouth.net...
:
: This is the "law" that is broken by the sale of uncertified/approved
: equipment.
:
: It comes direct from FCC's web site.
:
:
: ----------
--
: ----
:
:
:
:
:
: ILLEGAL CB TRANSCEIVER LIST The FCC's Office of Engineer and Technology
: (OET) has evaluated the devices listed below and has concluded that these
: devices are not only amateur transceivers but can easily be altered for
use
: as Citizens Band (CB) transceivers as well. As such, OET has further
: concluded that these devices cannot legally be imported or marketed within
: the United States for the reasons discussed below. Further, the FCC
General
: Council has issued a decision in a specific case involving one
manufacturer
: and has concluded that dual use CB and amateur radios of the kind at issue
: may not be approved under the Commission's rules and are in violation of
: several rules including the RF power level limits of 47 CFR 95.639.
(letter
: from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service,
: dated May 17, 1999). Transceivers used in the Amateur Radio Service below
30
: MHz do not require FCC authorization prior to being imported into or
: marketed within the United States, but transceivers for other services,
: including the CB Radio Service (CB), do require Commission approval. The
: transceivers listed herein and other similar models operate in the amateur
: "10-meter band" and are often referred to as "10-meter" radios or "export"

: radios. The amateur 10-meter band uses frequencies that are very close to
: the channels set aside for use in the CB service. Some of the transceivers
: that manufacturers call "10-meter" radios either operate on CB frequencies
: as manufactured and imported or are designed such that internal circuits
can
: readily be activated by a user, a service technician or a dealer to
operate
: on CB frequencies. According to Section 95.603(c) of the Commission's
rules,
: a CB transmitter is a transmitter that operates or is intended to operate
at
: a station authorized for the CB service. 47C.F.R. &#65533; 95.603(c). The
: Commission's equipment authorization experts in the FCC Laboratory have
: determined that the transceivers listed herein and other similar models at
: issue here are intended for use on the CB frequencies as well as those in
: the amateur service because they have built-in capability to operate on CB
: frequencies. This capability can be readily activated by moving or
removing
: a jumper plug, cutting or splicing a wire, plugging in a connector, or
other
: simple means. Thus, all the transceivers listed herein and similar models
: fall within the definition of a CB transmitter. See 47C.F.R. &#65533; 95.603(c).
A
: CB transmitter must be certificated by the FCC prior to marketing or
: importation. 47 C.F.R. &#65533;&#65533; 95.603(c); 2.803. Moreover, the dual use CB and
: amateur radios of the kind at issue here may not be certified under the
: Commission's rules. Section 95.655(a) states: "..([CB] Transmitters with
: frequency capability for the Amateur Radio Services . will not be
: certificated.)" See also Amendment of Part 95, Subpart E, Technical
: Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL
488084
: (August 17, 1988). This clarification was added to explicitly foreclose
the
: possibility of certification of dual use CB and amateur radios, see id,
and
: thereby deter use by CB operators of frequencies allocated for amateur
radio
: use. In addition, the Commission's equipment authorization experts have
: determined that these devices violate or appear to violate a number of the
: rules governing CB devices. For example, they may use emission types not
: permitted, or emit RF power at a level in excess of the levels permitted
in
: the CB radio service. See 47 C.F.R. &#65533; 95.639. In view of the foregoing,
the
: following "10-meter" transceivers are not acceptable for importation or

>
> Any thoughts?

Yeah, I have some "thoughts". This drill was very successful a couple years ago. The freq was 7.037. The mode was CW. That particular RRAP net spanned the entire continent east to west and north to south. For my own part I did it with a 100w underdash TS-50 mobile rig and a lame end-fed random wire strung thru some trees. Took three-four posts in RRAP to set the net sked up and it went down like clockwork. Versus multiple threads then thud nothing.

The model is there, it worked becuase the choices of freq & mode were based on commonly known & accepted ham radio folk-level physics going back to the Lord of the Reddios Hiram Percy's days on the bands fer cripes sake.

To wit: 40m is the only even half-reliable choice for transcontinental comms any evening in the U.S. CW was chosen as the mode for even more obvious reasons. There was no way in hell I could have copied AC6XG's weak signal if he had been running SSB in the garbage up the band. He was Q5 all the way with CW.

Yeah, sure, I unnerstand . . A 40 CW RRAP net "would not be all inclusive".

But it worked see and those pore things who would be "excluded" from inclusion in a repeat of the successul model done it to themselves.

If there was ever a glaring example of why free lunches and "all inclusive think" doesn't work this current idiotic thrash is IT.

>position--and you may correct me if I understood it incorrectly--that
>you are not a "phone man" except for the occasional use of 2m FM.
>
>Dave K8MN

Dave:

I am not personally opposed to phone operation, just to the fact that most hams pursue it as their only mode of operation, and consider the act of speaking into a microphone as an adequate, if not exceptional, demonstration of their communications skills. For that, I personally give zero credit. It has been proved time and again that any idiot can pick up a microphone and talk into it, and most idiots do. I believe that being a fully-functional ham, capable of providing emergency communications under the most austere conditions, out of necessity requires operational proficiency in CW. If you ain't got it, you ain't got it -- it's as simple as that. Any ham who can only communicate by talking is going to run out of communications capability under a lot of real-world emergency conditions, whereas a CW-proficient ham will be able to keep on going. Digital mode capability is good, and I pursue digital mode technology myself as my primary emergency capability -- but without a solid CW backup ability, I wouldn't consider myself adequately prepared.

I don't use phone on HF for two reasons: I was totally put off the concept by a run-in with a Ten - Ten Number Nazi while I was living in Colorado in 1991, and since moving to Delaware, I've been an apartment dweller, and low-power CW and digital modes just work better for me under my austere operating conditions. I am not against HF Phone as a mode, just what goes on there. Contests generally don't expose me to the worst of HF phone operation's problems, so I do use it for them and will be

participating in the November Sweepstakes Phone contest this weekend with my club, The Dover ARC, W3DOV. I hope we get a Clean Sweep!

So, the short answer is, no, I'm not a "phone man" per se. I am primarily a CW and digital mode operator, though lately I'd have to put digital in first place. However, I believe any ham who does not possess CW proficiency at a useful level (above 13 WPM) to have zeroed himself out as far as his true emergency communications capability is concerned, and, as a result, need not be taken seriously as a ham.

Oh, Jeeze...silly me. It was in Florida that I was speaking. When I posted this the other evening, I was going back over some old, old stuff when I was all gung ho on getting some really effective EmComm going in this area. Have tried three huge efforts and all three have failed--for specifically the reasons you mention. People are long on ideas and saying "attaboy, go for it" but very, very short on putting up or shutting up.

I gave up a few months ago...although I am going to begin working with the ARRL EC Courses again.

You're either very mistaken or full of lies on that one, Dan. I have never said anything about me being in the military because I've never been in the military. I was raised a military brat--but never joined.

> justify your existance on the bands.
>

What a crock. I mean, seriously, you can *think* or *demand* all you want
that some licensed amateur must "justify" their presence. But, you're
wrong, Dan, big time. I get on the air any time I want, any where I'm
authorized and I talk.

>

Dan, it sounds to me like we're quite happy with things the way they are,
and that you and those like you are the ones bitching and moaning. I've
never complained once about my being an licensed radio amateur, and I never
complained about the process.

And, uh, just FYI since you don't seem to get it: the FCC implemented the
current and every other licensing process.

No. :-) It's fairly obvious that this venue isn't for discussions,
it's largely about a bunch of regulars trying to hold onto their
old-time standards and practices values to insure they have
something to feel "superior" to others. Hence, the "chatroom"
label.

Don't take testosterone supplements and use your computer.

That isn't true for the personnel in the Office of Electronics and
Technology at the FCC. The Commissioners are appointees
but they do have some knowledge of radio or they wouldn't have
been appointed in the first place.

A problem you may be having is that the FCC doesn't boost or
favor amateurs. It isn't an adjunct to the ARRL. The FCC has to
regulate ALL US civil radio and there are many, many different
radio services to be regulated in the USA.

Misuse of GMRS radios is more equivalent to someone doing 60 on
an interstate posted for 55 on a day with good weather. It's more
like being a tattletale in grammar school than telling the police about
an emergency involving life and property danger.

Troll Post.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

To those of us who regard the regulated use of GMRS as something of
value, the offense is more equivalent to holding up a convenience
store at gunpoint than it is to throwing a piece of kleenex on the
sidewalk.

What are YOU doing to protect the value of your license and the
privileges granted thereunder, whatever the service?

I've been a member of ARRL for about 6 months now. The Morse issue isn't
very important to me.

Good manners are important for everyone everywhere.

> I see no critique of the rather obvious ill-mannered abrasiveness of
> others in this newsgroup-chatroom. Such is done on a regular basis
> by licensed radio amateurs. Does the amateur license permit a

Here you come closest to having a point. You are right that I don't come
down on others for their treatment of you, at least every time there is
some name calling. I'm letting you fight your own battles there. But if
asked, I'll let anyone know I don't agree with that. Just as I told
Steve, I don't agree, but it is a matter of style.

> Yet, you seek a long "discussion" with me on charges of "ill-mannered
> behavior" without pointing out specifics.

If you comment on my posts, you will recieve responses from me. If Steve were to comment on my posts, disagreeing with me, he would recieve replies. It's kind of how this newsgroup thingy works. :^)

> What you seem to be doing
> is simply an attempt to silence an unlicensed-in-the-amateur-service
> citizens because their viewpoints are contrary to yours.

What exactly is my viewpoint?

> You would prefer that all be "Mr. Nice" and agree with your
> viewpoints, yes?

Nope, I prefer people to play nice, but to *have* to share my viewpoint would be a bad move. I can be wrong. I would like to be right. If a person has a different view than me, I want to know why. If I can be convinced, I'll change my mind. Simple and direct.

>>> Strong debate is simply strong debate. Some cannot take such
>>> things...and those people should leave lest they upset themselves.

If this were real debate.....

There were no more than three questions involving any sort of semi-serious
math. Most could be solved by inspection of the four answers provided. Ignoring
them still left 47 other questions, and you need 37 to pass. Pure random
guessing would be right 25% of the time, too.

Go to one of the online practice sites and try one, Dan. You'll surprise
yourself.

>
>Name one situation in the last five years where cw was the only
>mode available in a real world emergency condition.
>
Here are three:

On December 31, 1997, the crew of the freighter MV Oak was rescued after an SOS call on 500 kHz. This was on the last day of that all ships had to carry CW/Morse equipment. 26 were rescued. It's not ham radio, and today such a rescue would be effected by other radio systems. But it was less than 5 years ago.

During the ice storms here in the Northeast a few winters back (1998-99?), power and communications were disrupted across much of Quebec, Ontario and upper New York state. Hams used CW/Morse extensively when SSB would not get through due to poor propagation, limited power and makeshift antennas.

K0HB has posted that during the Red River flood a few springs back, hams used Morse/CW when SSB would not get through.

Would PSK31 or other data modes have worked in the above cases? Maybe - but they were not available when needed.

Does any of this absolutely prove that ALL hams MUST be codetested? Of course not. But the fact remains that Morse/CW has been used in recent emergency situations when other available modes could not do the job.

See my reply to Steve.

Why/How could an FCC license get lost by the Buro? I don't get it.

JJ, If you really wanted to know this you could have already researched it in Google and got more than you asked for. Since you have not, and clearly do not wish to do so, it is more than clear that you are just using this standard wave-of-the-hand dismissal of code as a viable and potentially ONLY means of communications.

It was only a week or so ago that Hans, K0HB, who wants to do away with all code testing, noted in a post here on rrap that CW was used in the flood emergencies a couple years ago in the Dakotas when poor HF propagation and noise conditions made SSB unusable. If you had been paying attention you'd already know of this post, and now you must find it yourself if you want your question answered.

Also, on the very last day of Maritime CW activity on 500 khz -about 5 years ago- a ship in distress near England used CW to call for help. That's in the archives also. So your refusal to acknowledge the facts -which are available to you as well as the rest of us- tells us a lot about you. And it ain't pretty.

>Time will tell.

It's already telling, Bill. 151.82 and 151.88mHz (MURS) are aleady active with 18 wheeler traffic. Again, I live a considerable distance from the Interstate, and I think we can rest-assured that they are NOT using "legal" MURS gear.

FRS channels are not that acitve in this area yet, but much of what I hear is profanity and child's play. Why did wee throw 14 valuable UHF channels away for toys?

GMRS frequencies are becoming more active with the sale of GMRS HT's at Wal-Mart, but I never hear callsigns...Of course with the traffic I hear, I don't think they'd want anyone to kow who they are. The local PD is also using them for "talk-around".

> time period.

That's 9.6 seconds per question, reading the question, doing the math,
reading the answers, and selecting the right answer EVERY time. On a
Lark, without studying.

Bruce is Rain Man. Wonder how he does with the ponies?

> I wasn't at WA8ULX's VE session back in 2000, but there is nothing impossible

> holds a General class license, last modified 23 January 2002. So if he has
> indeed passed Element 4, it has not been processed.

Correct. I passed the General, the Advanced, and the Extra in the
early 90's. Without an accompanying Farnsworth/Morse CSCE, the
upgrade is not processed.

But I've gone over this with you before.

> There is no contradiction in WA8ULX's claims,

Except that Bruce in an apparent functional illiterate.

but there IS an apparent
> contradiction in N0IMD's claims. Why should a reasonable, unbiased person

> database and other information?
>
> If N0IMD is referring to old Element 4B, that is not the test under discussion
> in this thread. And there is no direct external evidence that N0IMD ever passed
> that element.

Yes, element 4b. So should DICK, while resting on his laurels, when
refering to the Extra exam that he passed, do I get to tell him its
not the Extra exam of today and therefore is not valid to the
discussion?

> If anyone is "being silly", it's not me. If N0IMD has actually passed the test
> under discussion (Element 4), the FCC database should reflect it.

You're being silly by claiming that the advanced and the extra, today
combined, are not equivalent to today's extra.

Yes or No?

And Bruce is being silly by non-stop badmouthing people who have
entered the ARS under different licensing requirement than he, to then
get himself to Extra and still badmouth the newcomers.

Yes or No?

> Before April 15, 2000, "the Extra test" included both a 20 wpm code test (or
> waiver), and old Element 4B.

The 20wpm is administered as a separate exam. At least I was able to
take the written separately. I passed the Advanced and the Extra
written elements.

> So here's a straight question:
>
> Has N0IMD passed Element 4 at a VE session?
>
> Yes or no?

No, not the latest version of Extra. Has DICK?

Lets see. 50 questions in 8 minutes (480 seconds) comes to 9.6
seconds per question. Jim did it in 7 minutes (420 seconds) which is
8.4 seconds per question. Missed three.

You're right! He should have slowed down and gotten 100%. No point
in rushing an exam when there is no payoff in either an upgrade or a
pot of "CB-Plusser" money.

You dont have to believe it, doesnt matter to me, but others here have taken the same test on line and have beaten my time. So I guess eveyone here is lying except you. I think the real problem is you cant pass it, so you are trying to come up with another reason why testing is un fair to you.
It took your great NCI leader over a year to pass it, and as he had said many times it was the CW that was his down fall, yea right, so whats your excusse now?

>an emergency involving life and property danger.

Apathy is apathy, Robert, regardless of wether we are discussing speeding
or violating FCC R & R's.

I grew up throught the first CB boondoggle, and it appears the current
crop of Commissioners is ripe to do it again.

Along with manufacturers anxious to sell products regardless of wether
they will be used appropriatley, there are those who compound the problem with
their "it ain't my problem" attitudes.

At first the CB problem was just the occasional user exceeding thier 5
minute limit or using the wrong channel for diffrent licensee contacts. DXing
and avoiding the use of legally issued callsigns followed with Cycle 18 and the
proliferation of linears.

Now it's an international problem. It's worst from 26 to 28mHz, but there
are now rampant abuses throughout the spectrum. "Legal" users throughout the
world are either denied access or must tolerate severe QRM almost 24/7.

Had this been nipped in the bud, that band might still be available for
productive LMR use. Assignment to a minimally regulated radio service was
stupid from the start...Not enforcing the regulations that WERE in force at the
time was worse.

If we drop the hammer from the git-go with enforcement actions (and make
the widest dissemination of those actions) it is the best possilbe thing that
could happen if the "new" services are to really flourish.

Failing to enforce the law means we all suffer eventually. Failing to
report infractions that we are aware of (and have reasonably accurate evidence
of) means that we cut our own throats eventually.

Case in point (and close to home): Federal prohibitions on linear
amplifiers that can operate between 24-35mHz...That was not imposed becasue of
anything we (Amateurs) did...it was to curb their illegal use by CBers.

Stick your head in the sand if you care to, Robert, but how long until the
"wide band" radios we enjoy now become a thing of the past due to "freebanding"

abuses?

Don't think they'll do it? Congress is great for knee jerk reactions. Remember Newt Gingrich and the tape recorded cellphone call? That ONE misuse of a scanner led to the implementation of the Electronic Communicaiotns Privacy Act, and the reason we can't buy a "full coverage" scanner.

Just who in the heck do you think believes THIS crap, Brian...?!?!

HAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! !

>But I've gone over this with you before.

And you were wrong if you asserted that you had to send a CSCE for a test
you previously passed and already had a license issued for.

>You're being silly by claiming that the advanced and the extra, today
>combined, are not equivalent to today's extra.
>
>Yes or No?

No, they are not. New licensee's are NOT requied to pass Element 4A
anymore.

If you already had a General you already ahd "evidence" of having passed
the code test.

Sheesh.

Thats another MAJOR CHANGE that shows how the exam proceedures have been downgraded.

When you took the test at the FCC office you had ONE CHANCE. If you failed you took it again. THE WHOLE THING. The next time you traveled to the FCC office.

No such thing as code credit or partial exam credit.

Incentive licensing to the max.

Problem . . .
```

Most Yaesu transceivers can be easily modified (often with a simple change effected through the menuing system, as is the case with the FT-920) to transmit on CB frequencies (and, in most cases, on other unauthorized bands as well). This is, of course, true of most (if not all) brands of Transceivers.

By the definition cited above _all_ such transceivers would be treated as illegal for marketing in the United States. Is there a rationale (in the law itself) for including only transceivers limited to 10m operations (which, of course, many _legitimate_ amateur transceivers are designed for) or is this an arbitrary application of a regulation that, technically, should include all transceivers capable of such modification?

I'm _not_ supporting the use of 10m rigs for CB use, obviously. But I do question the legitimacy of limiting the sales of radios that _are_ designed for amateur use (and are often far less expensive than comparable "approved" 10m rigs) on a basis that by any logic can and should be applied to _all_ transceivers capable of similar modifications.

Can anyone clarify this one?

Taking exams and passing exams are two very different things. In the
early '90s, passing the Extra meant passing a 20 wpm morse test. Did
you do that too? If not, you didn't "pass the Extra".

> >the written should follow, it really serves no purpose.
>
> I don't feel CW should be mandatory.

CW isn't mandatory. US hams aren't required to use it on the air at
all. And it's been possible to "get into" US amateur radio (get an FCC
license) without a code test for the past 11-1/2 years.

> Certainly the technical license classes
> should not be tied to learning CW.

What do you mean by "technical license classes"?
>
> Anyone can pass any license class in a day or two of memorizing the license
> pool questions.

I'm sure there are people who would have a very hard time memorizing
the license pool questions in a day or two.

> The subject material is very good and relevant - IF one learns
> the material.

Agreed.

But the technical aspects of the test are not mandatory, just as CW is
not mandatory. US hams are not required to build anything, nor to
experiment, nor to actually use most of what's on the written test.
Yet passing the written test is mandatory for all classes of license.

If someone says there should be no code test because code use is not
required, then by the same logic the technical aspects of the written
test should be removed because their use is not required.

As to relevancy, almost any survey of hams will show that more hams
use CW/Morse (on HF/MF anyway) than build their own radios. So it
logically follows that CW/Morse skill is "more relevant" to HF/MF
amateur radio than technical skill and knowledge. Of course, there's
no reason that a ham can't have it both ways - technical skill and
operating skill are not contradictory.

> The test and license preparation classes should be changed to learn the
> material, not just memorize the answers.

Have you ever taken such a class? I haven't - my license test preparation was all self-study. The classes I know of try to teach the material, not the test. But with public question pools, their success is limited.

Tell us how the written tests can be changed so that simple memorization won't work.

I am not even sure that multi-band transceivers COULD be completely stopped from being modi-
fied lest it hinder the multi-band operation itself. I don't know. It is clear, however, to me that the
single-band, 10 Meter rigs on the list are there for one reason; that being to try (not successfully) to
limit dual-use transceivers and to stop their being used by illegals on the ham bands. One thing that
may be a legal plus if the "list" were challenged is that most of these radios have "band" switches.
If a radio is a so-called "10 Meter" radio, then it implies ONE band. If so, it has no need for "band" switches and, therefore, does not meet criteria for a single-band, 10 Meter radio. And we
all know what those radios are REALLY for (wink, wink), right?

Sorry, Steve, that event was well after the ECPA was enacted and the
FCC in turn was required to ban "general coverage: 800 Mhz scanners.
These were instigated by the cellphone protection and privacy lobbies.

The only fallout of that Gingrich affair was the prosecution of the
media (radio ?) for releasing the intercept, and the court found
them not guilty under the Ellsberg/Mew York Times third-party-release
theory.

By his alleged logic he has been an Extra for all this time. Strange
though, seems there's a small matter of a piece of paper called a
license, granting PERMISSION.
Doncha love how he changes the rules to fit his whim?

Yup. In fact, you had to pass the appropriate code tests (receiving AND sending) before they'd even let you try the written.

>
>No such thing as code credit or partial exam credit.

Exactly. And no "pay another fee, have another go" either. You could not retest until 30 days had elapsed.

And don't forget about needing two years' experience to even try the Extra.

>Incentive licensing to the max.

Those rules existed before the changes of 1968.

>
> Just who in the heck do you think believes THIS crap, Brian...?!?!
>
> HAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! !

Steve,

Before April 15, 2000, a person could take and pass all the writtens, yet still have a Tech license. Passing 5 wpm would only get a Tech Plus. So it's quite possible that N0IMD had a Tech Plus back then, and CSCEs for 3B, 4A, and 4B. Getting an upgrade from those CSCEs would have required 13 or 20 wpm code, OR a waiver for same.
>
>>But I've gone over this with you before.

I think you misunderstand, Steve.

>>You're being silly by claiming that the advanced and the extra, today
>>combined, are not equivalent to today's extra.
>>
>>Yes or No?
>
> No, they are not. New licensee's are NOT requied to pass Element 4A
>anymore.

That's right. The Q&A pools from old Elements 4A and 4B were combined and revised to make up new Element 4. Some questions were eliminated in the process.

Old 4A was 50 questions, old 4B was 40 questions. New 4 is 50 questions. Which is "more rigorous" or "harder to pass"? That's an opinion question. Some think having to do 2 tests totalling 90 q's is easier, others think it's harder.

> If you already had a General you already ahd "evidence" of having passed
>the code test.
>
> Sheesh.

But N0IMD was a Tech Plus before restructuring.

Whether he passed the old elements is beside the point, because the discussion is about current Element 4. There is no evidence that N0IMD has passed that test, or even tried it, yet he denies the possibility that someone else has done it in eight minutes.

Seems that N0IMD confuses the ability to pass an amateur radio exam with the ability to write posts here that are grammatically correct and well punctuated. Oddly enough, the claims of KB9RQZ (remember him?) were never so scrutinized by N0IMD.

Fascinating.

> He would have had credit for 13WPM for the Advanced.

Steve, thanks for the vote of confidence. No, I would have been a
General had I passed the 13wpm exam in 1987. I've never progressed
beyond 9wpm.

> Bottom line is..."Where's the beef...?" It's oviously NOT in his wallet!

Yeh, that's true. I keep it nearby, though.

You're right, of course. I stand corrected. Hiowever it WAS the ECPA's
provisions under which the scanners were banned. My bust.

Therein lies the confusion, then...

Then he never "passed" the Extra. If he took the written
"pre-restrcutruing", "passing the Extra" required passing of all written
elements AND the requisite Code test.

He obviously never did that.

>Seems that N0IMD confuses the ability to pass an amateur radio exam with the

Steve, they do have a "No Fly" day in China. Everyone in China has to
kill flies. Anyway, do you know what the PCTA say when anyone tries
to bring up any other field that requires licensing?

Meanwhile, I sure wished I had it written down when my commander
granted permission for me to operate from Somalia. Live and learn.

Now you'll excuse me while I go take $250 from a couple of
"CB-Plussers" by taking the Extra exam without error in UNDER 7
minutes, all on a lark and having never studied.

Sorry Bruce, I don't have the money to do that. I'm selling my sick
leave to buys some stuff for the kids Christmas.

Now If I were a genius like you, I could just lift money from "CB
Plussers" on a whim.

Hams used Morse/CW last night. What was the emergency? If Hans
message had not gotten through, how catastrophic would the results
have been? What outcome did the CW message impact?

Dick, he didn't change your mindset enough to operate CW when a fellow
amateur asked you to, re: radiosport.

The Russians and most of the old Eastern Block have not abandoned CW. And Im not just talking about ham radio. And from what I hear are going to vote NO to dropping it to 5wpm.

You have not proved this to be viable, either for OOK CW codings in-use or for testing.

The FCC is not chartered as an old-time communications mode preservation agency. The FCC does not mandate OOK CW codings over and above any other mode/modulation for any US radio amateur on any allocated band.

There has been NO, repeat NO, evidence of any "need" to preserve any mode/modulation. None. All you have presented is your own personal opinion.

>However, the "I had to do
>it, so do you" argument is based on the much denied, but real truth of

>reasonable and purposeful licensing requirements.

No, you would have an unchanging regulation structure permitting nothing new in amateur radio in at least the last half century. No new modes, no new bands, everything proceding as it always had been (since 1934) and having no relationship to the changing state of the radio art in the rest of the radio world.

>your face that looks like an ass is pretty.

Returned insults aside, consider the date of the alleged "saving by
morse code" story. The last day of December...also known as
New Year's Eve.

Newspapers and wire services have long had a practice of inventing
(as in making up, writing fiction) "fillers" to pad out news copy. This
has been done by generation after generation of new journalists
while stuck on bad-hours work shifts. Most of these stories are
obvious fiction, short, happening in a faraway place, innocuous
having little worth to anyone except as humor. Once in a while the
filler writers get carried away. That "MV Oak" story may be one of
those.

If anyone can find the registry of this Motor Vessel Oak, please
post it or a reference to where such evidence may be found.

Someone may reply to the above, shouting in anger that the ARRL
or some amateur publication published it (so it must be true!). The
fact that some information is published on real paper with real ink
or at some prestigious venue is no guarantee of truthfulness. The
(considered distinguished) Washington Post, the same paper that
carried the Watergate break-in story, had (much later) published
several weeks of a series about a young immigrant's struggle to
survive in a new land. Several other publications praised this work
and it was up for a Pulitzer Prize. Problem was that it was fake,
a fabrication, even to photographs accompanying the story. The
Pulitzer was withdrawn and the journalist fired from the Post.

Back to the mighty Oak story. Consider that it was supposed to
happen on the last day of maritime morse code (for emergency)
communications which was also New Year's Eve, traditionally a

date for imbibing alcohol. Consider also no evidence of registry of such a vessel. Consider also that it was spread by those who strongly favored morse code use...and testing. Coincidences? It is highly improbable that all those things would have happened as indicated on the date given.

The international maritime world adopted the GMDSS system to replace the old radio operator morse keying distress calls on 500 KHz for several years before this alleged MV Oak incident. The origins are well documented. On the Internet, simply search for SOLAS (Safety Of Life At Sea) or GMDSS (Global Marine Distress and Safety System) and read the references and statements, noting dates.

PCTAs have long repeated the same myth that GMDSS "will not work" according to just one source, a retired mariner who appears to have never used the new system. That myth completely over-looked the many years of research and testing and field trials of the eventual GMDSS...done by mariners and those in the maritime business. "It must be Morse done by an experienced morseman" is the battle-cry of the mythtakes. Nonsense, it is simple denial.

And it is a highly suspect story, given the date and "last day of 500
KHz emergency use" and some difficulty in verifying any registry of
this alleged "MV Oak." See my comment to JJ.

>During the ice storms here in the Northeast a few winters back (1998-99?),
>power and communications were disrupted across much of Quebec, Ontario and
>upper New York state. Hams used CW/Morse extensively when SSB would not get
>through due to poor propagation, limited power and makeshift antennas.

Creating editing makes that appear that hams were the savior of
all in Quebec, Ontario provinces of Canada and New York state.
Somehow, Canadians and Americans managed to survive by their
own infrastructure of communications.

>K0HB has posted that during the Red River flood a few springs back, hams used
>Morse/CW when SSB would not get through.

CNN, CBS, NBC, and ABC all covered the Red River flooding by
journalists on the scene, most using video-audio linking by satellite
with the rest of the nation. On some of the video, NG humvees
carrying radio equipment were in the background, such radios not
equipped for "CW." Some of the on-the-scene interviews were done

by telephone to nearby locations.

>Would PSK31 or other data modes have worked in the above cases? Maybe - but
>they were not available when needed.

Not quite true. "Other modes" were simply not mentioned. Since
the claimants were not on-site in any case, all one has is the word
of those who promote morse code use. :-)

>Does any of this absolutely prove that ALL hams MUST be codetested? Of course
>not. But the fact remains that Morse/CW has been used in recent emergency
>situations when other available modes could not do the job.

No. The only "fact" remaining is that some CLAIMS exist by only a
few individuals...and those individuals are avid promoters of morse
code use.

You haven't answered any question.

First of all, are you "obsessed with titles, rank, and privilege?"

Second, were you elected into US amateur radio service or did you
seek it personally?

>> So, in your quest for "good manners," what are you disguising?
>> Is it a need to parrot the morals-manners as eschewed in monthly
>> issues of QST? Is it a firm, undying Belief in the inherent "goodness"

I'm aware of the manner/tradition of computer-modem newsgroups
since USENET in the 1980s. Been there, done that...

>> What you seem to be doing
>> is simply an attempt to silence an unlicensed-in-the-amateur-service
>> citizens because their viewpoints are contrary to yours.
>
> What exactly is my viewpoint?

Unknown. You SEEM to be slightly spoiling for some dispute
under a somewhat transparent "reason" by discussing "manners."

>> You would prefer that all be "Mr. Nice" and agree with your
>> viewpoints, yes?
>
> Nope, I prefer people to play nice, but to *have* to share my viewpoint

>would be a bad move. I can be wrong. I would like to be right. If a
>person has a different view than me, I want to know why. If I can be
>convinced, I'll change my mind. Simple and direct.

If you want to play "20 Questions," please seek another venue.

>>>> Strong debate is simply strong debate. Some cannot take such
>>>> things...and those people should leave lest they upset themselves.
>
> If this were real debate.....

Real debate requires formulating a base on real items, not
myths, and countering statements of others the same way.

Real debate doesn't gratuitously insult the opponent in place of a counter-argument. Real debate isn't about intimidating the opponent with implied physical force, personal insults, or telling them to be quiet or go away. Real debate isn't about claiming that personal desires and certification are a model for others to follow as a baseline.

Real debate is tough. It means keeping one's cool and on the subject, not the opponent's personal appearance, manner, facial expressions, or tone of voice. It isn't for weenies or those who want to play barbarian, taking the other side solely by force of arms.

This newsgroup has evolved into a Chatroom with the PCTA regulars trying to control (not moderate) it by intimidating others. In another venue it would be called heckling or bullying.

Da, comrade!

The "Russians" (USSR) pulled out of Afghanistan after failing
to subdue the Taliban. The USA pulled into Afghanistan and
essentially liberated the country from Taliban rule. If the USSR
used "CW" in radio there...and the US military didn't, what
conclusion do you want to come to? "Better Red than dead?!?"

Actually your two questions were: Well perhaps they should? Referring to
your suggestion that I seek psychological help, and the second was some
presumed obsession with rank, title, etc.

I answered the first. These people sought me out, not the reverse.

As for an obsession with title, rank, and privelege, For the most part, I
could care less. I do like the extra priveleges of the Extra license,
and the privelege of using my drivers license.

And what was all this cw traffic, just some hams sending reports
back and forth to themselves? Are you saying there were no other
means of communications? No other agencies could communicate? All
telephone lines were inoperative to all points? The only way the
world heard of this emergency was via ham radio cw?

> >
> > K0HB has posted that during the Red River flood a few springs back, hams used
> > Morse/CW when SSB would not get through.

And again, were they passing emergency traffic? How much? Are you
saying that no other agencies, highway patrol, sheriff's dept.,
police departments could communicate? It was either ham radio cw
or nothing?

> >

And they won't even if it is dropped as a requirement. It is just
that knowing cw isn't the savior of the world, nor does it make
one a better ham than some other. Dick and Larry are proof of
that.

I don't think we did - I would have seen your call when I redid the logs. Next
year!

--

A thought on participation in ARRL contests vs. Diamond clubs and QST line
scores:

One of the criteria for including or excluding stuff from QST is popularity. If
contest participation drops, they will see it as a drop in popularity of the
contest and confirmation of their decision to remove the scores, rather than as
a protest. End result is shooting oneself in the foot, as it were.

No speed is specified by S25.5. 5 wpm is adequate to meet the treaty, even
though anyone with a working knowledge of Morse knows that 5 wpm represents the
barest minimum of skill.

Even if all of the former Eastern Bloc/Helsinki convention countries support
retention of S25.5, it is extremely doubtful that they will have enough votes
to carry the day and preserve S25.5. Even if they do, all that will happen in
the USA is retention of Element 1.

> that.

You're too much of a fool to understand that it's no more than one more mode - the most basic easily implemented mode of all. Refusing to learn to use it makes a ham equal to those who did only in your feeble mind.

>
>And what was all this cw traffic, just some hams sending reports
>back and forth to themselves?

It was whatever communications was being handled by the amateur HF SSB nets,
but which could not get through on SSB.

>Are you saying there were no other
>means of communications? No other agencies could communicate?

In some cases, yes. Electric power, commercial communications and transportation were disrupted for many days. Repair efforts were hampered by the lack of transportation. The ice storm conditions were widespread, not localized in a few small areas. Winter auroral conditions sometimes made SSB unintelligible even when signal strength was adequate.

>All
>telephone lines were inoperative to all points?

Why must they have been inoperative "to all points"? Wouldn't loss of telephone communication to some points needing communication constitute an emergency?

>The only way the
>world heard of this emergency was via ham radio cw?

What you're really saying is that the ice storm wasn't an emergency at all, and that amateur radio wasn't needed. Were you there?

>> > K0HB has posted that during the Red River flood a few springs back, hams

>> > not. But the fact remains that Morse/CW has been used in recent emergency
>> > situations when other available modes could not do the job.

Please note the above paragraph. I am not claiming that the use of CW/Morse in emergencies by hams is some sort of proof that ALL hams MUST be CW/Morse tested. If CW/Morse skill in emergencies was that important, it would not only need to be tested upon license grant, but also retested at intervals to insure that all hams retained the skill. That's obviously not going to happen.

>> Dang, Jim, ya did his research for him.

No, I answered a simple, straightforward request:

"Name one situation in the last five years where cw was the only mode available in a real world emergency condition."

with at least three examples. There's at least one more - see KT4ST's accounts here of a hurricane (Floyd?) back in 1999.

>> But I bet you didn't change his mindset.
>
>If you mean that cw is going to save the world, you're right.

JJ's responses really seem to be that amateur radio isn't going to "save the world" .

>Then why interject yourself into a running thread and argue for one
> side versus the other?

WHOA YOUR OBNOXIOUSNESS!

We have had about one-too-many of Lennie the Creep's lambastings about
RRAP being a "public" forum and how anyone can comment on anyone else's posts
made therein.

Sorry you don't like your own rules, Your Scuminess.

>Then why do you target one individual and ignore others?

Maybe because there's not a two-facedness exhibited by the other
side...such as the one you blatantly display in this very post.

>I'll ask again, why do you interject yourself into a running thread and
> ignore other, obvious disputes and name-calling?

I'll reiterate...Maybe because it's one side doesn't display a
two-facedness like the one YOU display...Such as antagonizing someone over
jumping into a running thread, all-the-while having archived posts of
lambasting others for suggesting YOU not do it...?!?!

>I'm aware of the manner/tradition of computer-modem newsgroups
> since USENET in the 1980s. Been there, done that..

...but not very well, it appears.

>If you want to play "20 Questions," please seek another venue

Mike, Lennie loves to "suggest" that "engineers" would add a great asset
to Amateur Radio, yet when asked direct questions, even of purely technical
matters, Lennie scowls about how no one dare to impose upon him that which he
would do to others.

>Real debate doesn't gratuitously insult the opponent in place
> of a counter-argument.

Then why do you do it?

>Real debate isn't about intimidating the
> opponent with implied physical force, personal insults, or telling
> them to be quiet or go away.

WHOA AGAIN, YOUR PUTZINESS!

Let's back up a few lines...

Mike said...: >>Nope, I prefer people to play nice, but to *have* to
share my viewpoint
>>would be a bad move. I can be wrong. I would like to be right. If a
>>person has a different view than me, I want to know why. If I can be
>>convinced, I'll change my mind. Simple and direct.

To which YOU replied: >If you want to play "20 Questions," please seek
another venue.

There we have it again in black and white...TWO FACED TWIT!

Geeze, you make this too easy!

>Real debate is tough. It means keeping one's cool and on the
> subject, not the opponent's personal appearance, manner,
> facial expressions, or tone of voice. It isn't for weenies or those
> who want to play barbarian, taking the other side solely by force
> of arms.

You mean like calling people jackbooted thugs, elitists, nazis, etc,
Lennie? You mean like "veterans" who call others "Dill Sahgent" and
"muh-reene", all-the-while trying to associate themselves with KIA's who died
two and a half years before you were even in the service?

>This newsgroup has evolved into a Chatroom with the PCTA
> regulars trying to control (not moderate) it by intimidating others.

And of course Lennie NEVER tries to intimidate or control the
NG...yeeeeeeah...Riiiiiiight.

>In another venue it would be called heckling or bullying.

What other venue would THAT be, Lennie? According to Google you haven't
posted in ANY other NG under any of your screen names in at least four years.

Actually, what YOU do in THIS newsgroup is heckle and bully. You're not
very good at it, and you sem to like humiliating yourself, but that's OK...It's
actually fun to watch.

Putz.

It would seem that popularity would be a yardstick for inclusion or
exclusion but recent board decisions contradict that statement. Contest
participation is up yet line scores are out. DXCC participation is up

but recent "How's DX?" colunms are small.

I agree with Hans that member activities belong in QST. The removal of "Section News" irritates me. Being on the receiving end of two-faced babble from my Roanoke Division Director and of dismissive condesent from the ARRL President fanned the flames. The Diamond Club is elitist pap which is at odds for the ARRL's raison d'etre. My ARRL contest non-participation will last as long as I think the protest serves any value. My withholding of donations to any ARRL program will likely last as long as Mary Hobart does. If the League is really that hard up for money, perhaps they could begin charging ten bucks each for Old Timers Club or Rag Chewers Club certificates. Oops!--Too late. They're already doing that. Maybe they could fire Mary and her assistant.

I was visiting Ontario the next summer, and aside from the news reports
during the disaster, the locals I met related that the power outages
were huge and unbelievably (their words) widespread. They said that the
only thing that kept it from being worse was that it was unusually warm.
Otherwise there would have been many people frozen to death.

<more snippage>

>
> JJ's responses really seem to be that amateur radio isn't going to "save the
> world" .

I think we have a case of CW haters simply reiterating their hate for CW.
When asked for instances of CW being used in an emergency, rather than
"thanks for the info" we get a belittlement of the circumstances. That
is not very kind toward the people stuck within those circumstances.

Oh, I get it. Because some people drink on New Year's Eve, the story
can't be true! That's quite a deduction on your part, Len.

> Consider also no evidence of registry
> of such a vessel.

Who, besides you, says that there is no evidence of registry?

> Consider also that it was spread by those who
> strongly favored morse code use...and testing.

Newspapers? Wire services?

> Coincidences?

I'd be more inclined to believe that several newspaper and radio/TV
accounts of a story are more reliable than the speculations of an
uninvolved individual on the USA's west coast.

> It is highly improbable that all those things would have happened
> as indicated on the date given.

What makes it highly improbable, Len? On what date(s) would the events
have been likely?

> The international maritime world adopted the GMDSS system to
> replace the old radio operator morse keying distress calls on
> 500 KHz for several years before this alleged MV Oak incident.
> The origins are well documented. On the Internet, simply search
> for SOLAS (Safety Of Life At Sea) or GMDSS (Global Marine

> statements, noting dates.

What does this have to do with the event which you suspect as a
fabrication? Why should we believe any of the things published on the
internet since your charges make it likely that they too could be
fabrications?

> PCTAs have long repeated the same myth that GMDSS "will not
> work" according to just one source, a retired mariner who appears
> to have never used the new system. That myth completely over-
> looked the many years of research and testing and field trials of
> the eventual GMDSS...done by mariners and those in the maritime
> business.

Hans Boeltzig ,OH2EA, retired in the late 1990's after decades as a
maritime communications officer. On his former ship's first run with
the new equipment and a new Filipino comm officer, the ship wasn't heard
from for days. Drop Hans a line if you desire confirmation.

> "It must be Morse done by an experienced morseman"
> is the battle-cry of the mythtakes. Nonsense, it is simple denial.

Where is your proof of the battle cry claim? Who made the claim? When
was the claim made? On what dates was this claim made? Where is
documentation of such a claim to be found? If published on real paper

with real ink, how can we be certain that it is not a fabrication? If published using only electrons and viewed on a computer monitor, how can we be certain that it is not a fabrication? Will such have a bearing on participation in CW Radiosport?

>> Newspapers and wire services have long had a practice of inventing
>> (as in making up, writing fiction) "fillers" to pad out news copy.

>What are you using as proof of this latest black helicopter scenario?

Awwwww.....come ON Dave! Don't ya know...??? The ARRL has spent billions in blackhat money to infiltrate the world's news agencies and flood them with deceptive pro-code news items. They even purposely sabotaged a thrid-world freighter with no GMDSS gear on board so they had to revert to "ancient" LF distress gear. Cost them extra to have the "hit" fall on New Years Eve...Union wages, ya know.

BUT...! They sold the movie rights to Steven Spielberg, and with some ghost writing by Steven King, it ought to be in Theaters by THIS New Years Eve...!!! Ought to outdraw that Potter kid 5-to-1 !

>Once in a while the
>> filler writers get carried away. That "MV Oak" story may be one of

Oh yeah...I forgot!

They have bought the rights to Gordon Lightfoot's "Ballad of the Edmund Fitzgerald". They plan to re-write the lyrics to tell of the tragic sinking of the MV Oak in order to perpetuate Morse Code testing in the Amateur Radio Service.

On a freighter of steel
that was bent at the keel
was a story of sleight and deception
sank by a spook crew
sent by "you know who"
to allow Morse Code reception....

This could be fun! Wonder if I can get a share of the royalties...?!?!

Lennie:

That is one of the most absurd statements I've ever seen on this newsgroup. Once again, you expound the age-old fallacy that those of us who support code testing requirements are some kind of Luddites who don't want anything new to be implemented in the ARS. Nothing could be further from the truth, and my own operation is proof that I don't personally think that way. Get a grip, man.

I am not a cw hater, the only thing I would hate is to see it go
way. I just can't subscribe to the theory put forth here by some
who think hams using cw are going to save the world and if a ham
doesn't use or care for cw then that somehow lowers his status.

Don't flatter yourself Roll, I was a ham operator long before no
code was ever thought of. I have been licensed since 1961, how
long have you? Since 1981 you say? Hey Roll, I got 20 years on you
as a licensed ham, you're just a wet behind the ear newbie, a much
inferior ham than I am.
Now go talk to the cbers, you could probably learn a lot.

You know nothing about CW because
> you have had no practical experience in using it at a useful proficiency

> two things -- laziness and whining.

As a novice I could only use cw on HF, I sat in front of an FCC
examiner for my General and Advanced license and I can still copy
and send CW, so don't try to inflate your big ego by attempting to
degrade my abilities. It just chaps your butt to think that CW is
just not as important to ham radio as you would like.

Larry thinks that since he had to do it all hams should. Face it
Larry, CW is a minor part of ham radio today and it isn't going to
change. Deal with it newbie.

Is that so hard to believe, or is it that you just don't *want* to believe it?
That's the problem with you no-coders. You know nothing about CW because
you have had no practical experience in using it at a useful proficiency
level, therefore you tend to disbelieve it's potential. It all boils down to
two things -- laziness and whining.

>> >
>> > Would PSK31 or other data modes have worked in the above cases? Maybe -
>but
>> > they were not available when needed.

And if they had been available, they more than likely would have been utilized
by hams who also had good CW skills as a backup. For some strange reason,
CW-proficient hams seem to dominate the landscape in ham radio digital mode
usage.

>> > Does any of this absolutely prove that ALL hams MUST be codetested? Of

...just what we really need!! Copies of POLICE ID
type badges being sold to goofy hams so they can
use them to impersonate Law Enforcement Officers.

(..and *PLEASE* don't tell me that some hams among
us will not purchase these things for the SOLE PURPOSE
of impersonating a Police Officer to intimidate civilians.
In case you didn't know it, impersonating Law Enforcement
is a Felony in most States)

Real nice.

I hope that some fatass ham with a ballcap on
his head who thinks he's "big shit" flashes one
of those "ham badges" and then get's their sorry
ass tossed in jail.

Putting it another way:

(1) Contest popularity is increasing, not decreasing.
(2) QST has little or nothing to do with the popularity of contesting.
(3) If contests are not reported in QST conetsters will go elsewhere
for what they're interested in and QST loses.

I'm still waiting for Hare to tell me how much it costs the ARRL per
page of QST to publish contest results.

Too early for the left coasters, oughta be 10 - 10:30pm EST.

> on Wednesdays? Alternate QRG
> 3537 in case MUF is too low.

Some specific Wednesday nite. The MUF hasn't been below 7Mhz for years
except as a result of a few solar events, 40 will work, 80 is too much
of a stretch, not that many 80m antennas around and the left coasters
don't do well here before our midnite on 80m. The alternative to 40m
should be 20m.

Larrie,

Your truth is out there...

You champion morse code testing because you passed it. It gave you rank, status, privilege in an avocation involving radio. You keep on connecting your own personal desires as the model for all radio amateurs of the future to follow...and then denigrate those who oppose your viewpoints.

You fit the "Luddite" label in everything but destroying machinery.

>Nothing could be further from the truth, and my own
>operation is proof that I don't personally think that way.

QED. What you do is "champion" yet offer no proof other than claims in this newsgroup.

At the same time you continue to post myths and half-truths denigrating "no-coders" who were supposed to be in US amateur radio "in hordes, advancing the state of the art (of ham radio)."

What has Larrie Roll done to advance the state of the amateur radio art? Continue to exist?!?

>Get a grip, man.

No need. I have a full set of luggage.

Don't let the bus door hit your ass on the way out...

>
>You mean "I couldn't care less".

Coslo cares a great deal...otherwise he wouldn't be building that
big mountain out of all the posting.

It's a fairly common tactic in computer-modem communications.
Those who have overly-personal attachment to a set of ideas,
mores, ethics, etc., wish to have all think as they do or be as
important as they think they are. They will willingly fight anyone
who threatens their self-perception on a personal level without
considering the actual subject matter.

As such, everything they find that is contrary to their personal
beliefs is open season for personal attacks on the person having
contrary ideas...the subject matter be damned.

Coslo tried to misdirect on claiming "the subject title is CW
radiosport" and then connecting that with personal activities
involving his local activities. That connection is invalid but he
claims outrage (albeit mild) and attempts to charge "wrong-
doing" because of "not following the subject thread." :-)

"CW" is a familiar term in amateur radio for on-off keyed morse
codings. "CW" is a required pass-fail test element for a US
amateur radio license having below-30-MHz privileges. To
legally engage in "CW Radiosport" one has to pass an amateur
radio license test involving manual morse code testing. There
is no requirement whatsoever to pass some local test on being
"sought out for officership" in a local organization.

Beep, beep.

There are those, such as Larry, that will forever cling to hazing ritual of
code testing. Instead of helping amateur radio grow, all they can do is
complain and reminisce about the good 'ol days.

You seem to have an overly personal attachment to the idea of doing away with the requirement for a morse test in the amateur radio service in which you are not a participant. You think that all others should believe as you do. You come out scratching and clawing on a personal level against those who threaten your self-perception.

> As such, everything they find that is contrary to their personal

It's what I said. It's as true now as when I passed the exams.

Oh, I agree 100%. Lets limit US involvement in amateur radio to 150,000 persons.

So Bruces rises to the top on the backs of people he despises. No
wonder you think your license is worthless. Get a "Sharpie" and write
"VOID" across the front of your license and send it to Riley. And
give the $250 dollars back to those "CB-Plussers." They probably have
families to feed.

You're the one who wimped out. You waited for NCI to finish their
work so you could finally be like Larry.

I took as much of test as you did, and took it years earlier.

> waiver for same.

And before that, a person could be a Novice, pass the General writtens
(the FCC split that exam just prior to my testing, got a CSCE for the
second part that expired after one year) and be called a Technician,
then about 1994 get renamed as a Technician Plus. Then take the
General (again), the Advanced, and the Extra, and in one year those
CSCEs expire and no license is granted.

We've covered this ground before.

I don't deny it. QRZ wouldn't lie, would it?

I said I don't believe it.

The conditions were:

1. without studying
2. on a bet ($250)
3. two "CB-Plussers"
4. in eight minutes
5. with no errors
6. by a functional illiterate

> Seems that N0IMD confuses the ability to pass an amateur radio exam

They're passed every day. No confusion here.

with the
> ability to write posts here that are grammatically correct and well
> punctuated.

Thank you. But I do make mistakes.

> Oddly enough, the claims of KB9RQZ (remember him?) were never so
> scrutinized by N0IMD.

Who admitted to having dyslexia and other brain disorders. Who didn't claim to have passed the Extra exam on a lark, without studying, on a bet, for $250, from two CB-Plussers, in 8 minutes, without error. Who didn't mispell every other word when telling other people how dumb they were.

And I had commented on ocassion that I had no idea what he was trying to say.

> Fascinating.

Indeed. He was more believable than Bruce.

So now you are the Champion of Bruce!

You libs always need a cause, no matter how dispicable.

Did you see his announcement where he was going to visit Kim, then changed his story when someone described his planned visit as "stalking?"

What the hey, what should we expect from the creepiest of creeps? At
least
pedophiles hang out in areas where they have an actual interest in what
transpires.
Maybe the Putz has just become misplaced or suffered an involuntary
transfer.

Once again, you expound the age-old fallacy that
> those of us who support code testing requirements are some kind
> of Luddites who don't want anything new to be implemented in
> the ARS. Nothing could be further from the truth

It's the most ubiquitous and the classic of the code-haters many
lamebrained and easily refuted mantras. Same one as the idiot JJ has
been using here lately.

That is not what you stated. Your previous claim to have "passed the
Extra exam" was erroneous. You passed part of it.

Dave K8MN

It's been possible to get any class of US ham license with 5 wpm since 1990.
All the restructuring did on that account was eliminate the need for a medical
waiver.

More qualified that what? It just makes you more qualified in the
use of CW and outdated mode and nothing else.
And you're too dense (no if about it) to understand that just
because you consider yourself so proficient in cw does not make
you any better than any other ham, not even a no coder.

Come back in a few years when you have some real experience and
something of real value to say, newbie.

JJ:

No need to be surprised. I'm owed at least a decade's worth of
proof I've requested from other posters before I'll jump through any
hoops for anyone else. However, I'm not holding my breath
waiting for it, and neither should you.

I don't know if you're just being ignorant, or what, Waddles. I really like my callsign. Lots of people like my callsign. Yes, I did pick it and yes I like it. What, exactly, is your point--if you, for once, have one?

Oh, and if you're drooling so desperately for tits...ya might want to get a job, earn a little money and run on down to the club; you're bound to find someone who's desperate enough to take you there. Alcohol does wonders for perception.

Men with no intelligence and weaknesses often find strength in raping women. Are *you* one of those kinds of men, Waddles? Just in case you have some kind of sick notion that bothering me look at my tits is going to intimidate me, you should be forewarned that, to me, you're nothing but a limp mouse in the clutches of a tiny pussycat... In other words: your desire to see my tits translates to your weakness for any kind of intellect.

And poor JJ is too brainlocked to understand what that and no-test
tests have done to ham radio. There is no longer anything extra about
an Extra class license.

The real weakness in Larry's argument is not that he can't or won't prove
any real-world emergency situation that substantiates his claims about CW.
It's in the fact that he actually believes what he says about CW.

>Maybe. Let his operation play out before another shot is taken.

Not me. Here's the deal:

I'm going to try to be on 7037 CW, plus-minus QRM at 9 PM EST (that's 0200 UTC) every Wednesday from now on. Alternate QRGs are 14037 and 3537, in that order. This is an informal roundtable/discussion operation. All are invited to participate. Subject is whatever you want to discuss, consistent with FCC rules and good amateur practice.

If you don't have the required license, or station, or skills, get them or do a third-party thing at the station of someone who does have 'em.

If it bothers someone that hams are talking about ham radio issues using ham radio as a medium rather than the internet, too bad. They have the same opportunity to particpate as I - in fact, they have more opportunity, because it's easier, quicker and cheaper to get on 7037 CW now than in the past. When a complainer starts paying for my time, my computer, my phone line and my AOL membership, maybe I'll consider that they might have a legitimate beef.

I don't guarantee that I will always show up, just that I'll do my best to be there.

>or just hams using cw to send report back and forth to themselves?

I don't know - I wasn't there. Accounts by those who were there say that at
least some of the communications were for agencies liike the Red Cross and
state emergency agencies.

Besides, what does it matter? The challenge was for 'someone in an emergency
situation using CW when no other mode was available'. Examples were give, You
can easily research the accounts posted here on rrap by using google - that is,
if you really want the info.

The experiences of others are different. Nobody is claiming that CW/Morse is
used in all emergencies, or even most emergencies. But there ARE examples of
recent emergency situations where CW/Morse was the only mode available that
would do the job.
>
>> >
>> >> > Would PSK31 or other data modes have worked in the above cases? Maybe

The above is a very important point. I'm not claiming that other modes would
not have worked - only that, of the AVAILABLE modes at the time, CW/Morse was
the only one that worked in a few cases.

>You seem to have an overly personal attachment to the idea of doing away
>with the requirement for a morse test in the amateur radio service in
>which you are not a participant.

A morse code test is still required to BE a participant in amateur
radio below 30 MHz. One cannot be a participant without passing
that separate pass-fail test element. That requirement is a matter
of codified law which was passed long ago. Codified law can be
changed. There is a large movement among both licensed and
unlicensed hobbyists to change regulations to eliminate the code
test. According to Herr Robust's arrogant demands, one cannot
BE anything worthwhile without passing HIS requirements. Why?

>You think that all others should believe as you do.

Incorrect phrasing. I do not think that all should believe as YOU
do, that all amateur radio requirements should remain at the level
at which YOU demand tested expertise.

Are you now the arbiter on what is "good and proper" in amateur
radio?!? YOU don't control the radio regulations, do you? Yet
you demand that certain regulations remain solely on the grounds
of your demands.

Removal of the code test will be nothing more than the removal of
a superfluous and unneccessary government test by the same
government agency that does NOT mandate any morse code use
over and above any other allocated mode/modulation, any band,
by any radio amateur.

>You come out scratching and clawing on a personal
>level against those who threaten your self-perception.

"Scratching and clawing?!?" :-) :-) :-)

What in the world are you imagining?

I've pointed out that the government does not require any mode over and above any other mode on any allocated band yet the International Morse Code test is the ONLY mode manually tested. I've pointed out that the only government agency in the US granting amateur radio licenses has ALREADY stated that it does not think that any morse code test has any relevance to them for licensing radio amateurs. I've pointed out that several international organizations are promoting a rewrite of (at least) ITU-R Recommendation S25.5 to eliminate the morse code test for any amateur radio license. I've pointed out that the US adminstration's preliminary views for WRC-03 include not only rewriting S25.5 but nearly all of the Recommendations in S25, which do not include any mention of amateur radio code testing for licenses. I've pointed out that other radio services in the US have either reduced their morse code operator skill requirements to zero or (for the majority) never considered that as a mode in those radio services.

None of that was any sort of "self-perception." The only possible perception is that morse code is simply an outmoded method of communication that is either not used in other radio services or not considered useful in granting any radio operator licenses in the USA.

The only "scratching and clawing" seems to come from the old-timers in amateur radio who favor the mode for several personal reasons: It gives them rank/status/privilege to hold themselves as "superior" to others in radio...yet it carries absolutely NO radio technical skill accomplishment credentials; they have become Believers in the standards and practices of a half century or more ago and (subconsciously) want all others in the future to preserve that ad infinitum; they need the rationales of "elitism" as told to them by a national membership organization who has been espousing the old-time modes since its inception.

Removal of the code test for future radio amateurs will NOT affect these PCTA morsemen in amateur radio licensing. They will not be locked out of any amateur radio pursuits or privileges. They will not have their licenses taken away because the morse code test has ended. Only their "feelings" will be hurt if the code test is eliminated.

So...these PCTA want radio regulations to preserve their "feelings?" Codify law to favor these old-timers and forget about the future and all the amateurs who may want to enter later? Of course. They want it all as they made it, nothing else. They demand it. They scratch, claw, insult, and demean anyone who resents their self-perceived "expertise" and delusions of grandeur in a hobby activity. They are Morsemen...the few, the overly-proud.

>So? Free speech is free speech regardless of venue. Do you believe
>yourself to have a god-given right to express yourself on the amateur
>bands without having passed a license exam?

You have it exactly backwards, Dave.

Mr. Anderson does not want to express himself on the amateur bands at all. If he did, he'd have gotten a license and set up a station long ago.

The USA has had amateur licenses with no code test for 11-1/2 years now, and for the past 2-1/2 years the maximum code test has been 5 wpm. Yet Mr. Anderson's Extra is still in its box.

>> Such free speech has been met by some, like yourself, trying to

>>
>> No problem if those policy matters affect ONLY those who are
>> already licensed.

Well, there you have it. Mr. Anderson thinks that licensed amateurs should not discuss amateur radio policy matters on the air unless such policy matters affect only already-licensed hams. In other words, full-scale censorship of what we can talk about on the air, far beyond the realm of the FCC rules.
>
>> FCC regulations apply to ALL CITIZENS whether they are licensed

FCC regulations apply to noncitizens in the USA as well as citizens. They apply to those who are too young to vote, too.

>A morse code test is still required to BE a participant in amateur
> radio below 30 MHz.

Only because of international treaty requirements.

>One cannot be a participant without passing
> that separate pass-fail test element.

The law...it's the law...Treaties negotiatied and approved by the
Congress...No one in THIS forum.

>That requirement is a matter
> of codified law which was passed long ago. Codified law can be
> changed.

That law has been changed three times since 1987 and is pending the change
of international treaty for it's final deletion. Only your obsession makes it
a whipping boy here, Lennie.

>There is a large movement among both licensed and
> unlicensed hobbyists to change regulations to eliminate the code
> test.

Even NCI has admitted that there's not much more left to do and has
decided on a new agenda and called for a slate of new officers to determine the
future of THAT organization.

>According to Herr Robust's arrogant demands, one cannot
> BE anything worthwhile without passing HIS requirements. Why?

There's no one here named "Herr Robust", and no one here has made any such
demands.

>>You think that all others should believe as you do.
>
> Incorrect phrasing.

No, it's right on the money. You make a point of being angrily
antagonistic towards anyone who even remotely suggests ANY course of action
other than that which YOU have suggested....To the point of profanity and slur.

>Are you now the arbiter on what is "good and proper" in amateur
> radio?!? YOU don't control the radio regulations, do you? Yet

> you demand that certain regulations remain solely on the grounds
> of your demands.

Why shouldn't he be? At least he has some experience in Amateur Radio matters. And in any case, the very same question could be redirected at YOU with the same ferocity. You seem to think that you have some mantle of invincibility because you are NOT licensed.

>Removal of the code test will be nothing more than the removal of
> a superfluous and unneccessary government test by the same
> government agency that does NOT mandate any morse code use
> over and above any other allocated mode/modulation, any band,
> by any radio amateur.

Opinion only. The actual practicality of Morse Code will never be fully appreciated by those who never allowed themselves the freedom to accept it.

>>You come out scratching and clawing on a personal
>>level against those who threaten your self-perception.
>
> "Scratching and clawing?!?"

Yep. Perfect analogy!

>What in the world are you imagining?

Too bad you can't read your bile objectively. It's really embarrasssing to think that you have the education and professional experience that you alledge, then see you behave the way you do.

>None of that was any sort of "self-perception." The only possible
> perception is that morse code is simply an outmoded method of
> communication that is either not used in other radio services or
> not considered useful in granting any radio operator licenses in
> the USA.

That Morse Code is not used by any other service is irrelevant. And it's "outmoded ONLY in YOUR opinion. Judging by actual on-the-air use, it's not that outmoded!

>Removal of the code test for future radio amateurs will NOT affect
> these PCTA morsemen in amateur radio licensing.

Not to obtain a license, perhaps, but it WILL affect Amateur Radio of which we ARE vested partiicipant...UNLIKE you!

>So...these PCTA want radio regulations to preserve their "feelings?"

Nope...to maintain the functionality of Amateur Radio.

>They are Morsemen...the few, the overly-proud.

Not overly proud...just licensed.

G'nite Lennie, ya PUTZ!

Jim:

Less than ten thousand new hams -- total -- in over 2.5 years of Restructuring???

But...but...but...wwwwe were pppppromised -- promised, I tell you -- that if only the mean-spirited, politically-incorrect, ozone-hole-expanding, ethnically-cleansing, spotted-owl-killing, rainforest-depleting, anti-woman, anti-choice, anti-everything-thats-good code testing requirements were reduced and eliminated, we'd get a mass influx of enlightened, technically-involved, computer-literate, politically-correct, diverse, trans-gendered, bi-sexual, female, young, socially-conscious new hams wearing hand-woven fabrics, Birkenstock sandals, pony tails, and little round eyeglasses. They would then tear down our antiquated, analog, CW-dominated ham radio infrastructure and replace it with a high-speed digital communications system that would give us the equivalent of a free, over-the-air World Wide Web with voice, data, image, and sound access via tiny, shirt-pocket sized devices which they homebrewed in the back of their VW microbusses with the floral pattern paint design and the large peace sign on the front.

What happened?

>can become an extra just like them with only a 5 wpm code test.

JJ:

It's true that you can become an Extra with just a 5 WPM code
test, but you can't become an Extra "just like us." All you can
become is a dumbed-down, give-away, Nickle Extra who doesn't
have the operational knowledge and skill Dick and I had as Novices.
I would think that if anyone's butts were chapped, it would be
those of you and your Post-Restructuring Extra-class hangers-on,
who can only hold up a piece a paper and claim "equality" with
your Pre-Restructuring superiors. Alas, you are doomed to live
in a world of guilt-by-association. You are not my equal. I am
your superior. You are a pathetic, withered, miserable excuse
for a ham radio operator who will never achieve the maximum
potential possible under the Pre-Restructuring licensing system.
I look down upon you from my lofty perch, and weep with pity!

73 de Larry, K3LT

Sniff, sniff -- what's that fishy smell? Ooooops -- better replace my
lofty perch!

Regardless, Len, to use your own words: You have an overly personal
attachment to the idea of doing away with morse testing. If "overly
personal" works in one direction, it works just as well in the other. I
haven't made any demands at all, arrogant or otherwise. To the "Herr
Robust" term, is this more of your taking the high ground and not using
personal insult and denigration? You are so laughably transparent!

> >You think that all others should believe as you do.
>
> Incorrect phrasing. I do not think that all should believe as YOU
> do, that all amateur radio requirements should remain at the level

I'm not demanding "expertise" and, in fact, no expertise at all is
required--only basic familiarity.

> Are you now the arbiter on what is "good and proper" in amateur
> radio?!? YOU don't control the radio regulations, do you? Yet

> you demand that certain regulations remain solely on the grounds
> of your demands.

Wait a minute, Len. You have decided that amateur radio should adopt
your views. Are you now the arbiter on what is "good and proper" in
amateur radio?
YOU don't control the radio regulations, do? Yet you demand that
certain regulations be changed solely on the grounds of your demands.

> Removal of the code test will be nothing more than the removal of

> morse code operator skill requirements to zero or (for the majority)
> never considered that as a mode in those radio services.

Your surely have pointed out those things. You've also pointed out that
there should be a minimum age requirement for radio amateurs. You've
also glossed over the fact that morse is widely used within amateur
radio so it matters little what other radio services do with regard to
morse testing.

> None of that was any sort of "self-perception." The only possible
> perception is that morse code is simply an outmoded method of
> communication that is either not used in other radio services or
> not considered useful in granting any radio operator licenses in

> the USA.

Other radio services have little bearing on what takes place in the amateur service. Morse code is used daily by thousands worldwide in the amateur service. Something in wide use is hardly outmoded. Your use of that term indicates a lack of awareness on your part.

> The only "scratching and clawing" seems to come from the old-

> who has been espousing the old-time modes since its inception.

I've asked you on several occasions to back up your wild claims of what you believe licensed radio amateurs who support code testing believe. All the drivel above must reflect a need on your part, to rationalize your envy of those who do what you can't do.

>
> Removal of the code test for future radio amateurs will NOT affect

> is eliminated.

Absurd. Those who are active on the bands must deal with newcomers entering amateur radio regularly. Any change introduced to amateur radio effects all those who are regular participants. Are you a regular participant?

> So...these PCTA want radio regulations to preserve their "feelings?"

Straw man alert! No one has ever made such a claim.

> Codify law to favor these old-timers and forget about the future and
> all the amateurs who may want to enter later? Of course. They
> want it all as they made it, nothing else.

Straw man number two! The regs have been changed. Newcomers can't possibly do it as I have done it.

> They demand it.

Straw man number three!

> They scratch, claw, insult, and demean anyone who resents their
> self-perceived "expertise" and delusions of grandeur in a hobby
> activity. They are Morsemen...the few, the overly-proud.

Scratching and clawing? What on earth can you be imagining? I've asked you before: Why is insulting and demeaning okay for you but not for others? I've also asked you what constitutes "overly-proud". Have you had time to jin together some coherent answers?

We frequently discussed U.S. amateur radio policy with some of the Finns
who are not U.S. citizens but who old U.S. amateur licenses through the
VE group which K3FK and I were involved with in Helsinki in the
mid-1990s. That was back in the days when I first encountered Leonard
H. here. He had no amateur license then either and it never once dawned
on me to consult him about discussing policy at any place or time which
I chose to do so. I'm thinking of getting on the air this very evening
and discussing amateur radio policy with already licensed hams just to
spite Len.

There is that "I am a much superior ham because I passed the 20 wpm Morse test" attitude again. Anyone who gets the Extra under the 5 wpm requirements is just as good and Extra as you and dickieboy, no even better because they probably don't have this superior attitude and ego problem you have. You just can't stand to think of other hams getting the Extra ticket without have to take the 20 wpm test like you did. It means that your Extra ticket doesn't hold any special meaning over anyone else's and that chaps your butt. I bet there are a lot of those "dumbed-down, give-away, Nickel Extra's" out there that have improved there cw skills and could beat you at it hands down.

Poor JJ, not really very bright, are you? Who said anything about
"better"?
Just more qualified as a communicator. If you think CW is outmoded that
means you
don't really pay much attention to what goes on within HF ham radio.
Your loss.

Larry, that would have happened if restructuring had happened back
in the 60's instead of incentive licensing. Now it's 21st-century
Republicanism. If you are strong enough politically and economically,
then you seize the RF bandwidth you need to save the children and to
hell with socialist government radio licenses.

Thanks, but it is how I feel about alot of things. In the fire service, there is a ton of stuff that I will probably never use, for instance.... in our current coverage area there are no high-rise structures, or structures above 3 floors. I still was tested on the knowledge of that even if I never get on a department where there are high-rise type structures. It is similar to the morse code in my own personal opinion.... I had to qualify for it, but don't use it.

You got into ham radio for your reasons, and others got into for their reasons. As well as I too. As long as you are not breaking the law/rules, enjoy the hobby to the fullest, and to hell with those that work against you.

Thats the way I see it....

Many things are not as they appear. For instance, taking an Extra
exam on a whim, w/o studying, scoring 100%, in 8 minutes, and taking
$250 from a couple of CB Plussers.

You're the King of Appearance.

Interesting the comments by others on taking the present Amateur Extra exam in 8 minutes.

It has come to me that Leonard H. Anderson, (lenover21@aol.com, lenof21@aol.com, nocwtest@aol.com, averyfine@aol.com, and others...probably "meghz", "earlybyrd" and vshah@aol.com.), a person alleged to have accomplished a "professional" radio career, once boasted that he would take the "Extra Lite out of the box".

Well...it's now been approximately 1,314,000 minutes since the inception of the "Extra Lite", and Lennie has yet to keep his boast. Go figure. What did we expect from a pathological liar?

And if one considers there's been NO Morse Code test required for access to 97% of Amateur allocations for over 11 years, Lennie has wasted over 12,614,400 minutes getting a license.

Whew...What a waste.

I have been active in contesting for many years. I have been a participant in the Sweepstakes contest since the early sixties.

In this contest part of the exchange is the sending of the 'check' this is the year first licensed.

In the phone contest in particular I noticed a LARGE INCREASE in relativley new licensees. I.E. 00, 01, 99 etc. I also heard several YL voices out there and a couple of kids even. Everyone having a great time.

Things are looking up for ham radio after all.

Just my opinion.

Young people are drawn to competitions, and radiosport contesting can be
called a huge global electronic splatball game. It may be the most
important tool we have to bring newcomers into the hobby.

Each year on SS Phone weekend we bill our club station (W0EF) as "The
University of Contesting" and it is always a great draw for younger/newer
hams in the club. In 2 or 4 hour shifts, depending on demand, we team up a
newbie with an experienced contester as a mentor in the 'second chair'.
Within 15 minutes it's pretty hard to tell which is which!

Wouldn't work. Larry has long ago laid the foundation for segregating
the ARS, and the wall has broken beer bottles embedded in the top. I
pity the poor person who tries to cross over.

Even Bruce wouldn't dare. The only way he can hold his head tall, is
by claiming the exam is a farce and that without studying he took $250
from CB Plussers....

Nope. A net gain of almost 10,000 total. The number of new hams is
much greater because the totals are reduced by expirations.

They're busy trying to work DXCC on SSB. ;-)

There's something odd here, though. I've been called a "liberal" or even just a "lib" for daring to support code testing, incentive licensing, meaningful written tests and operating skills - even though I can't recall ever naming a political party affiliation or candidate preference here.

OTOH, it's clear that nobody familiar with your views would call you a "liberal" except as a joke - or insult.

Yet our views on keeping or abolishing code testing, incentive licensing, meaningful written tests and operating skills are virtually identical.

So is code testing a "liberal" concept or a "conservative" one? How about the concept of eliminating code testing?

Come to think of it, how would you prove a score of 100%?
Yes, you'd have the successful completion paperwork, but that
only indicates that you passed. I don't think the VEs would
be allowed to show other people the actual completed and
scored test, for privacy issues.

It didn't take me that long to do the extra written, but I took my
time to avoid dumb errors. So the claim of 100% in 8
minutes doesn't seem that far fetched, but how do you prove it?

Ham Radio Magazine stopped publication in 1990 when its parent,
Communications Technology, Inc., was sold to CQ Communications.
That is not "almost 20 years ago."

The entire 22-year article collection of Ham Radio Magazine is
available on a three-CD-ROM set ($150) from either CQ or ARRL.

As to "dubiousness" of articles, anyone is able to verify that on
inspection of article contents and references. The editors in
chief were all licensed US radio amateurs...Jim Fisk, Alf Wilson,
Rich Rosen, Terry Northrup.

In article <3DD865A1.4E0DA361@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Regardless, Len, to use your own words: You have an overly personal
>attachment to the idea of doing away with morse testing.

Incorrect. I've pointed out what others, both "participants" and
"non-participants" (in amateur radio) have stated, how the
present radio regulations and international recommendations
are in regards to morse code testing for an amateur radio
license having below-30-MHz privileges.

While updating and streamlining law seems "overly personal"
to you, question yourself on why you wish to keep outmoded,
outdated regulations and deprive future amateurs from such
restrictions. You seem overly concerned with keeping all radio
amateur regulations at the state at which you achieved your
amateur license. Why? [rhetorical...it is glaringly obvious to
other readers...]

>If "overly personal" works in one direction, it works just as well in
>the other.

Wrong. Persistence in trying to update and simplify some
minor regulations which affect others, not yourself, is not
obsessive. It is just updating and simplification, a normal
situation in US law.

Your own amateur license status is in no way affected by any
removal of a code test. You will still have the same operating
privileges...by all the precedent of past "grandfather" rulings.

The attempt to keep outdated and outmoded regulations and
a complex class structure in an avocational activity simply to
suit personal desires at the expense of others is considered
obsessive...and totalitarian in nature to some.

>Wait a minute, Len. You have decided that amateur radio should adopt
>your views.

No. I've been pointing out changes in amateur radio regulations
to remove outdated and outmoded requirements which affect
others, principally the "non-participants" not yet licensed.

YOU have decided to attempt, by whatever means, to suppress
changes in US amateur radio regulations that contradict your
personal desires, ideas, and concepts. Such is evident by your

postings here, targeting individuals whose opinions are contrary
to yours...demanding that they cease commenting on the "basis"
of being "non-participants."

Unless there has been some revision of Communications Acts
since 1934, the US government does NOT restrict comment,
talk, discussion solely by licensed "participants." Yet you
insist that "participation" through licensing is "required."

>Are you now the arbiter on what is "good and proper" in
>amateur radio?

No, but then neither are you. You are not in the Federal
Communications Commission, are not an authorized official
appointed by them, nor do you have any special position
over and above any other free citizen on the United States.

You greatly misdirect the issue. Removal of the morse code
test for a US amateur radio license having below-30-MHz
privileges will NOT affect your personal amateur radio license.
The morse code test affects ONLY those not yet licensed in
amateur radio or who do not yet have below-30-MHz privileges.
Getting into amateur radio is NOT the same as "participation."

>YOU don't control the radio regulations, do?

I've never claimed to be a US radio regulator...as you seem to
claim insofar as amateur radio is concerned.

>Yet you demand that
>certain regulations be changed solely on the grounds of your demands.

I do not "demand." I point out regulations as they are, the
state of the entire radio art, the other groups and individuals
who argue their case for removal and changes of outdated,
outmoded regulations in an avocational radio activity.

YOU demand "participation" through licensing in order to
simply discuss and argue amateur regulation changes. Such
a demand does not have any legal standing.

>A test does not become superfluous and unnecessary based on your say so.

True on a single individual's "say so." Heil overlooks the fact
that removal of the morse code test for amateur radio licensing
is NOT that of a single individual or even a single group. The
United States Adminstration position on ITU-R Recommendation
S25 is to change it at WRC-03 and remove the morse code test.
That same view is held by the International Amateur Radio Union.
No Code International is a separate organization, composed of
both "participants" and "non-participants" in amateur radio who
are seeking the removal of the morse code test. Several other
nations' administrations are seeking the elimination of the morse
code test at WRC-03.

In the entire world of radio, morse code mode communications
has either been declining rapidly or was never considered when
a radio service was created. Morse code mode is used primarily
in amateur radio and even there its use is secondary and on HF
amateur bands.

There is absolutely nothing in the Communications Act of 1934
or subsequent revisions that establishes morse code mode as
something that should be kept inviolate as both a license test
requirement and as a mode in use to be preserved forever. That
mode is as subject to change/removal as any other mode.

US amateur radio is NOT a living museum of the past radio art
nor is there any moral, ethical, or legal reason to keep morse
code testing for licensing other than an ITU-R Recommendation.
That Recommendation (S25) is an item of discussion in the
preliminary WRC (now under way) and for WRC-03 next year.

>
>> >You come out scratching and clawing on a personal

>>
>> "Scratching and clawing?!?" :-) :-) :-)
>>
>> What in the world are you imagining?
>
>...a lonely and embittered old fellow with too much time on his hands.

Lonely? Hardly. Bitter? No again. Resolute? Yes. Arguing
reasons to change radio regulations, absolutely yes. Persistent?
Yes. Too much time on my hands? No, not enough to satisfy
all my interests even though I've had a career in radio-electronics,
was working HF communications before Heil, was active in more
different radio services than Heil in communicating, designing, and
building radio equipment.

>Your surely have pointed out those things. You've also pointed out that
>there should be a minimum age requirement for radio amateurs.

Why is that a "sin?" :-) Do you wish to be "proud" of a license
test that can be passed by six-year-olds? Do you want
CHILDREN as "responsible control operators" in amateur radio?
:-)
I've dropped that comment to the FCC in 1999 and haven't
mentioned it since except to defend the original statement
when already-licensed long-timers want to level charges
about it.

>You've
>also glossed over the fact that morse is widely used within amateur
>radio so it matters little what other radio services do with regard to
>morse testing.

No. I've accepted an ARRL poll set of statistics indicating that
on-off morse code keying is the second most-used mode and
not emphasized that this poll concerned only HF band use.

The major reason for morse code testing for licensing in 1912
was that on-off keying coding was the ONLY practical mode of
communications then and all radio services used that mode.
It made sense then and for the first radio regulating agency's
task of mitigating radio interference. In the following 90 years
of regulated radio, other radio services have either dropped
morse code use or never considered it as a mode when a radio
service was created.

Amateur radio must share the EM spectrum with all other radio
services. If those other radio services do not use morse code,
there is no reason for morse code licensing in order to mitigate
interference. The FCC stated in 1990 that it does not consider
morse code proficiency as sufficient for its needs to regulate
amateur radio by means of licensing. The FCC reiterated
that statement in 1999 in the R&O implementing US amateur
radio regulation restructuring.

>Other radio services have little bearing on what takes place in the
>amateur service.

Incorrect. Allocated mateur radio bands are not all exclusive for
amateur use. The only reason for government licensing testing of
morse code proficiency was to aid their task of mitigating
interference...by a then-common communications mode used by
all other radio services. If all other radio services do not use
morse code, there is no reason for testing as part of licensing.

>Morse code is used daily by thousands worldwide in the
>amateur service. Something in wide use is hardly outmoded.

OTHER modes are MORE widely used by more thousands,
worldwide. Other modes have NEVER been tested as part of
amateur radio licensing in the USA. The FCC does not mandate
morse code use over and above any other allocated mode, any
allocated band, any class of US amateur radio license.

>Your use of that term indicates a lack of awareness on your part.

Incorrect again. Being a "participant" in amateur radio does
not yield you any "expertise" in knowing more than others who
have worked in the larger field of radio.

>I've asked you on several occasions to back up your wild claims of what
>you believe licensed radio amateurs who support code testing believe.

...and I keep replying by pointing out the obvious PCTA's comments
in here. They appear to believe in retention of the same testing as
they had to pass (a long time ago) for all who come after them.
They want to preserve a mode which they, personally, passed, some

having learned greater proficiency in that mode. In other words, they judge others on their personal model. The FCC does not regulate radio based on anyone's personal model. The FCC is tasked to regulate US civil radio for ALL citizens.

>All the drivel above must reflect a need on your part, to rationalize
>your envy of those who do what you can't do.

"Envy?" I have no "envy" on becoming a self-centered bigot demanding others to obey their wishes.

Heil forgets that I started in HF radio communications before he did, have worked in many different radio services in the commercial sector AND in US government communications. Further, I've learned much more about radio physics, being able to design and build as well as operate. I have no "envy" of some minority amateurs after a professional career in radio-electronics covering a wider portion of the EM spectrum than is allocated to US amateurs..

>Absurd. Those who are active on the bands must deal with newcomers
>entering amateur radio regularly. Any change introduced to amateur
>radio effects all those who are regular participants.

The FCC is not tasked with satisfying just the "regular participants." The FCC is tasked with regulating US civil radio for ALL citizens.

If socialized medicine ever advances in the USA, I'm sure some medical-psychiatric help can be obtained to soothe the injured feelings of "regular participants" in US amateur radio. :-)

>> So...these PCTA want radio regulations to preserve their "feelings?"
>
>Straw man alert! No one has ever made such a claim.

Strawman allegation Burn Down! Heil just did with a tale of having to coexist regularly with beginners. :-)

>> Codify law to favor these old-timers and forget about the future and
>> all the amateurs who may want to enter later? Of course. They
>> want it all as they made it, nothing else.
>
>Straw man number two! The regs have been changed. Newcomers can't
>possibly do it as I have done it.

...and the bitterness of burning straw persists... :-)

Poor baby.

>others? I've also asked you what constitutes "overly-proud". Have you
>had time to jin together some coherent answers?

The British colloquialism is "gen," not "jin." :-)

Yes, I've GENerated a number of coherent statements preceding this. So have others on the NCTA side. The PCTAs still resort to the

personal denigration when attempting to argue their case. Status
quo in this newsgroup-cum-chatroom-for-regulars. :-)

>You seem to have an overly personal attachment to the idea of doing away
>with the requirement for a morse test in the amateur radio service in
>which you are not a participant.

Being a "participant" in any radio service is not required by any
law or regulation since the passage of the Communications Act
of 1934. Being a "participant" does not qualify one more or less
than any other citizen.

No one in the FCC is required to be a "participant" in any radio
service they regulate in the USA.

ANY "non-participant" of ANY radio service is permitted to
comment freely and openly to the FCC about that or any other
radio service. If you look closely at the law you will find that
is legally true.

"Participation" in a radio service does not yield automatic
"authority" over others in regards to the law on radio
regulations.

>You think that all others should believe as you do.

I believe in the basic freedoms guaranteed to US citizens by
the US Constitution. I believe that US law should be kept
reasonably free from totalitarian rule by insiders for their own
personal benefit. I believe in free speech and free assembly,
not in private enclaves where only "ruling parties" may run
things at the expense of others.

I do NOT believe in letting certain power-seekers and loud-
mouths and bullies push others around as if they "owned"
authority because they decided they were "chief."

Obviously Heil does not believe in the things I do...

>You come out scratching and clawing on a personal
>level against those who threaten your self-perception.

I will come out with virtual thermonuclear warfare against those who assume authority without being granted such authority. That is FAR more than "scratching and clawing" as you inelegantly phrased it.

I am not the one obsessed with trying to shove others around just because others have differing opinions. You DO that verbally, targeting ONLY those whose opinions differ from yours.

>Dennis Ferguson

Agreed that it is on a private website listing as once having been in the Great Lakes...one of many.

A problem is that this is a non-official website and there is no indication of WHEN this MV Oak was there. If it was there after 1997 then the original "last day of maritime CW" story would be bogus. The authentication of the listing rests with the person doing the listing. It is not a government site.

I'll just point out the coincidences of when that "last day" incident is supposed to have occurred:

1. Happened on New Year's Eve.
2. Happened on day before switching to GMDSS.
3. Reported by those who worked "CW" for a living.

That's an incredible set of circumstances. I'm not saying it didn't happen, just showing a case to suspect it from too many convenient circumstances.

Hi Hans,

I'm none too fond of contesting, but when I heard a friend calling contest
on 10m...I obliged w/the contact. I remember giving him the year I was first
licensed along with the number of contacts made during this "sweepstake."
(Yes, I was patient and waited my turn.) Take care, Hans. :-)

> 3. Reported by those who worked "CW" for a living.

None of which is relevent to the occurence of the MV Oak encountering an emergency which necessitated it's calling for assistance...in this ase on 500kHz via Morse Code.

Here's three coincidences of my own observation:

The MV Oak was registered in a 3rd world nation not known for it's lavish safety budget.

The MV Oak is known to exist and to sail the route it was on.

Ships at sea tend to experience disasters on the sea and occassionally need to call for help.

>That's an incredible set of circumstances. I'm not saying it
> didn't happen, just showing a case to suspect it from too
> many convenient circumstances.

Your only reason for "suspect(ing)" this is that it foils your numerous rants, Oh Putzy One.

Sheesh.

>
> The code test is still there. Why is it still there?

Congress...They have stated that the United States won't unilaterally,
except in cases of War, fail to adhere to treaties that it is signatory to.

What part of "LAW" do you not agree with?

AND, Your Putziness, the code test was still scheduled to "be there" when
you made your boast that you would get that "Extra Lite" out of the box. Ergo,
the presence of lack of the code test is irrelevent.

>>Well, there you have it. Mr. Anderson thinks...(SNIP)

>Mr. N2EY has it wrong, AGAIN...(SNIP)

Noted that Lennie can be addressed as "Mr. Anderson", and has never been
addressed as anything except by his given names by Jim Miccolis, yet cannot
extend the same courtesy to him.

Typical.

>Why go to an essentially private
> venue for "discussion" when THIS newsgroup already exists,
> unmoderated, open to anyone who has access to the Internet (no
> license required)?

Amateur Radio allocations are anything EXCEPT private. Previous case law
has given that Amateur allocations are "public domain" and do not enjoy the
protection of the law as it pertains to "privacy".

Amateur Radio allocations, including the one's suggested here, are easily
intercepted by any person with inexpensive, readily available receivers.
Indeed, the average citizen can listen to Amateur Radio communications far more
inexpensively than they could arrive at THIS forum....For that matter they
could PARTICIPATE in an on-the-air activity far more inexpensively than they
could arrive at this forum.

>Yes, six-year-old children can become licensed. Nine-year-old
> children can become extras. Be proud of a service where full

> licensing can be passed by children. It will make you feel very
> grown-up and important!

It does make me feel grown-up and important when a child can move beyond SpongeBob and Scooby-doo and move into something a bit more challenging.

Not that YOU would know ANYTHING about that challenge, Lennie. I see you are still prominently absent from the FCC database.

Putz

Nothing you have to offer is even remotely akin to "warfare", Lennie.
You are defenseless against those with the experience to speak knowledgeably on this topic. Your only "argument" is that otehr radio services do not use Morse Code. That is not an "arguement"...It's an excuse.

>I am not the one obsessed with trying to shove others
> around just because others have differing opinions. You
> DO that verbally, targeting ONLY those whose opinions

"Minor regulations" do not need changing.

AL radio regulations that pertain to or bear weight upon Part 97
licensee's affects ALL licensee's, present or future.

>Your own amateur license status is in no way affected by any
> removal of a code test.

However the Amateur Service as a whole is affected, ergo it IS our
business and it DOES affect us.

>The attempt to keep outdated and outmoded regulations and
> a complex class structure in an avocational activity simply to
> suit personal desires at the expense of others is considered
> obsessive...and totalitarian in nature to some.

"Totalitarian" only to those who look for reasons to blame their failures
on someone...ANYone...for those failures. Such as yourself, for example...

>>Wait a minute, Len. You have decided that amateur radio should adopt
>>your views.
>
> No. I've been pointing out changes in amateur radio regulations
> to remove outdated and outmoded requirements which affect
> others, principally the "non-participants" not yet licensed.

Oh? How could Amateur Radio adopt those "changes in amateur radio
regulations) WITHOUT adopting YOUR views, Lennie?

>YOU have decided to attempt, by whatever means, to suppress
> changes in US amateur radio regulations that contradict your
> personal desires, ideas, and concepts

Whew...You mean like YOU have by open communication with the FCC in
response to public inquiries, Lennie? Ooooooohhhh...EVIL Dave! EVIL!

>In the entire world of radio, morse code mode communications
> has either been declining rapidly or was never considered when
> a radio service was created.

Not relevent to Amateur Radio, Lennie.

>Morse code mode is used primarily
> in amateur radio and even there its use is secondary and on HF
> amateur bands.

Oh? You know this from WHAT scientific polling process? From WHAT
practical experience?

>US amateur radio is NOT a living museum of the past radio art
> nor is there any moral, ethical, or legal reason to keep morse
> code testing for licensing other than an ITU-R Recommendation.
> That Recommendation (S25) is an item of discussion in the
> preliminary WRC (now under way) and for WRC-03 next year.

WHEW! Lennie actually acknowledges that there are "reasons" for the
present existence of Morse Code testing. And PROPERLY cites the relevent
paragraph....NOW if we could get Lennie to ADMIT that the FCC has made
significant changes to accomodate the letter AND spirit of the United States'
compliance with treaties it signs.

Naaaaah. I ask too much!

Don't forget Farnsworth. Not even CB Bruce could pass the Farnsworth exam.

Here's another site that shows a very attractive picture of the Oak in
the Welland Canal in 1999:

http://www.wellandcanal.ca/salties/o/oak/oak.htm

This one isn't official either, but is independent unofficial confirmation
of about the only thing that the ship's registry would tell you, i.e. the
ship exists.

> If it was there
> after 1997 then the original "last day of maritime CW" story
> would be bogus.

Why would that be? I don't recall any report saying the ship was
lost, only that it asked for assistance. This one says the ship
was towed to Liverpool:

http://www.geocities.com/~sandusky99/98jan9.htm

Note that this one mentions that they also received a modern
EPIRB broadcast, and quotes someone from the British Coast Guard
saying that they hadn't had a Morse distress call in years, so I'm
having difficulty seeing why this would have been made up to fool
anyone about the current importance of Morse to maritime safety. What
would be the point?

I think it's very interesting that someone would say that an opposing point of view comes from the "twisted caverns" of someone's mind. But, you've done that forever and forever you will.

Final: it is my opinion that your belief of CW (to the fanatic level you take it) is quite weak. That's all there is to it, Larry.

No. I've been wondering why you said you'd "be in my area," then said you were going to TN. I couldn't figure out why one would go through Texas to get to TN...if TN is all they were going to.

Well, that is, until I realized who it is that's doing the traveling...by the way, have you left yet?

No pointing out by you was necessary. The regs are are clear to
participants and non-participant alike. Besides, as you very well know,
that isn't all you've done by any stretch.

> While updating and streamlining law seems "overly personal"

> other readers...]

Straw man alert! a) You do not determine what regs are outdated and
outmoded.
b) The regs are not now, nor have they been for a long, long time as
they were when I obtained licensing.

> >If "overly personal" works in one direction, it works just as well in

How is my persistence any different than your persistence, Len? Your
statements are simply ridiculous.

> Your own amateur license status is in no way affected by any
> removal of a code test. You will still have the same operating
> privileges...by all the precedent of past "grandfather" rulings.

Yet I'll be in contact with those who obtain their licenses sans morse testing. An unavoidable shift in skills and attitude will take place. I have every right to concern over these issues.

> The attempt to keep outdated and outmoded regulations and
> a complex class structure in an avocational activity simply to
> suit personal desires at the expense of others is considered
> obsessive...and totalitarian in nature to some.

What outdated and outmoded regulations, Leonard--the ones which you decide ar such? Since you are a non-participant, I'd say you've overly-personalized and obsessed over amateur radio regulations which have no bearing on you whatever.

>
> >Wait a minute, Len. You have decided that amateur radio should adopt
> >your views.
>
> No. I've been pointing out changes in amateur radio regulations
> to remove outdated and outmoded requirements which affect
> others, principally the "non-participants" not yet licensed.

I've been pointing out how silly some of your ideas seem to me. I love the part about a minimum age for licensees. Any change in an avocation effects all who partcipate. Those changes don't have anything to do with non-participants.

> YOU have decided to attempt, by whatever means, to suppress
> changes in US amateur radio regulations that contradict your
> personal desires, ideas, and concepts. Such is evident by your
> postings here, targeting individuals whose opinions are contrary
> to yours...demanding that they cease commenting on the "basis"
> of being "non-participants."

and YOU have decided to attempt, by whatever means to change U.S. Amateur radio regs despite the fact that you are not a licensee (nor have you even attempted to become a licensee). This is all very evident by your postings and your targeting of individuals whose opinions are contrary to you yours. You've even invited one poster to leave because you didn't believe he was strong enough to bear up under heavy debate tactics.

> Unless there has been some revision of Communications Acts
> since 1934, the US government does NOT restrict comment,
> talk, discussion solely by licensed "participants." Yet you
> insist that "participation" through licensing is "required."

Your comments have been made. I've pointed out that no one is likely to adopt the views of a non-participant on how amateur radio should be.

> >Are you now the arbiter on what is "good and proper" in
> >amateur radio?
>
> No, but then neither are you. You are not in the Federal

> Communications Commission, are not an authorized official
> appointed by them, nor do you have any special position

Yep. That was my point. You asked if I was the arbiter and I reflected your stuff back to you. You are not in the FCC, are not an authorized official appointed by them, nor do you have any special position over and above any other citizen. Why should I fold up my opinions and support yours?

> You greatly misdirect the issue. Removal of the morse code
> test for a US amateur radio license having below-30-MHz
> privileges will NOT affect your personal amateur radio license.

Incorrect.

> The morse code test affects ONLY those not yet licensed in
> amateur radio or who do not yet have below-30-MHz privileges.
> Getting into amateur radio is NOT the same as "participation."

One cannot be a participant without first "getting in".

> >YOU don't control the radio regulations, do?
>
> I've never claimed to be a US radio regulator...as you seem to
> claim insofar as amateur radio is concerned.

Why should anyone then accept your views over mine? After all, I have nearly forty years experience as a radio amateur. You have, well...none.

> >Yet you demand that
> >certain regulations be changed solely on the grounds of your demands.
>
> I do not "demand." I point out regulations as they are, the
> state of the entire radio art, the other groups and individuals
> who argue their case for removal and changes of outdated,
> outmoded regulations in an avocational radio activity.

Right. In your world, only others "demand". You "point out". You can declare regulation as "outmoded/outdated" with a wave of your magic wand.

> YOU demand "participation" through licensing in order to
> simply discuss and argue amateur regulation changes. Such
> a demand does not have any legal standing.

Oh no, Len. I don't demand. I simply point out.

> >A test does not become superfluous and unnecessary based on your say so.

> in amateur radio and even there its use is secondary and on HF
> amateur bands.

Wowsers! Good thing this group is not a general radio group and that it
concerns itself only with amateur radio. You know anything about morse
use at VHF/UHF by hams? I didn't think so.

> There is absolutely nothing in the Communications Act of 1934
> or subsequent revisions that establishes morse code mode as
> something that should be kept inviolate as both a license test
> requirement and as a mode in use to be preserved forever. That
> mode is as subject to change/removal as any other mode.

I've seen nothing mandating removal of morse testing in the act cited.

> US amateur radio is NOT a living museum of the past radio art
> nor is there any moral, ethical, or legal reason to keep morse
> code testing for licensing other than an ITU-R Recommendation.
> That Recommendation (S25) is an item of discussion in the
> preliminary WRC (now under way) and for WRC-03 next year.

No, ham radio isn't a museum. It is a place where thousands of
individuals use morse to communicate each and every day of the week all
over the planet.

What the hell do you mean, "Hardly" and "No again". You asked what I
was imagining. You can't dismiss my response.

> Resolute? Yes.

No, I wasn't imagining you as resolute.

> Arguing
> reasons to change radio regulations, absolutely yes.

I can certainly imagine you arguing.

> Persistent?
> Yes.

No, that wasn't one of the things I imagined.

> Too much time on my hands? No, not enough to satisfy
> all my interests even though I've had a career in radio-electronics,
> was working HF communications before Heil, was active in more
> different radio services than Heil in communicating, designing, and
> building radio equipment.

How can you afford to spend large amounts of your precious time posting
here at the expense of your other interests?

Heil doesn't know that you were active in "more different" radio
services than Heil so we'll dismiss that as pure speculation on your
part. Though you were working in radio and electronics before Heil,
that'll likely even out through those actuarial tables Brian B. keeps
coughing up. That aside, this group isn't about careers in radio and
electronics. It is about amateur radio. Heil has been an active ham
for thirty-nine years. Despite your professed decades-long "interest"
in amateur radio, none of the actuarial tables in existence see you
catching up.

> >Your surely have pointed out those things. You've also pointed out that

>
> Why is that a "sin?" :-) Do you wish to be "proud" of a license
> test that can be passed by six-year-olds? Do you want
> CHILDREN as "responsible control operators" in amateur radio?
> :-)

No sin, merely myopic on your part. Yes, I can be proud that a
youngster passes a test which some adults (do I need to name any?) don't
even attempt. If the FCC says licensed children may be control
operators, I have no problem with it. After all, as you've often
pointed out, the FCC is the only body responsible for regulating amateur
radio in the United States. The FCC has never instituted a minimum age
requirement.

> I've dropped that comment to the FCC in 1999 and haven't
> mentioned it since except to defend the original statement
> when already-licensed long-timers want to level charges

> about it.

Dropping a comment isn't the same as reversing your position. There's
no real defense possible given that the FCC hasn't had a history of
problems with young people in amateur radio.

> >You've
> >also glossed over the fact that morse is widely used within amateur
> >radio so it matters little what other radio services do with regard to
> >morse testing.
>
> No. I've accepted an ARRL poll set of statistics indicating that
> on-off morse code keying is the second most-used mode and
> not emphasized that this poll concerned only HF band use.

Nonetheless, you've conveniently glossed over the fact. In addition,
the ARRL poll did not concern itself with worldwide amateur use of
morse.

> The major reason for morse code testing for licensing in 1912
> was that on-off keying coding was the ONLY practical mode of
> communications then and all radio services used that mode.

> morse code proficiency as sufficient for its needs to regulate
> amateur radio by means of licensing. The FCC reiterated
> that statement in 1999 in the R&O implementing US amateur
> radio regulation restructuring.

I'm not much worried about mitigating interference to other services.
Morse can be used in the mitigation of interference between two or more
amateur stations. The FCC still found reasons to retain morse testing,
didn't it?

> >Other radio services have little bearing on what takes place in the
> >amateur service.
>
> Incorrect. Allocated mateur radio bands are not all exclusive for
> amateur use.

Your "Incorrect" is itself incorrect. I wrote "little bearing" and I
meant "little bearing".

The only reason for government licensing testing of
> morse code proficiency was to aid their task of mitigating

> interference...by a then-common communications mode used by
> all other radio services. If all other radio services do not use
> morse code, there is no reason for testing as part of licensing.

Government is still testing for morse in order to obtain an HF license.

> >Morse code is used daily by thousands worldwide in the
> >amateur service. Something in wide use is hardly outmoded.
>
> OTHER modes are MORE widely used by more thousands,
> worldwide. Other modes have NEVER been tested as part of
> amateur radio licensing in the USA. The FCC does not mandate
> morse code use over and above any other allocated mode, any
> allocated band, any class of US amateur radio license.

Do you start the frothing before you start writing in caps? The fact
that government doesn't find it necessary to test for other modes should
tell you that government doesn't see a need for it. I wasn't discussing
OTHER modes though, LEN. I was DISCUSSING the fact that MORSE is in
WIDE USE WORLDWIDE by radio amateurs.

> >Your use of that term indicates a lack of awareness on your part.
>
> Incorrect again. Being a "participant" in amateur radio does
> not yield you any "expertise" in knowing more than others who
> have worked in the larger field of radio.

If you want to snip out the part containing the term used, I'll simply
ignore your out-of-context response...

> >I've asked you on several occasions to back up your wild claims of what
> >you believe licensed radio amateurs who support code testing believe.
>
> ...and I keep replying by pointing out the obvious PCTA's comments
> in here. They appear to believe in retention of the same testing as
> they had to pass (a long time ago) for all who come after them.

I don't find your claim to be based in fact. I think you're being
untruthful.

> They want to preserve a mode which they, personally, passed, some
> having learned greater proficiency in that mode. In other words, they
> judge others on their personal model. The FCC does not regulate
> radio based on anyone's personal model. The FCC is tasked to
> regulate US civil radio for ALL citizens.

I don't believe that any number hold that view any more than I lump Bill
Sohl in with you.

> >All the drivel above must reflect a need on your part, to rationalize
> >your envy of those who do what you can't do.
>
> "Envy?" I have no "envy" on becoming a self-centered bigot

> demanding others to obey their wishes.

Ahh, Len, I think you do have envy and I think you have a problem with
anyone who doesn't kow-tow to your radio expertise.

> Heil forgets that I started in HF radio communications before he
> did, have worked in many different radio services in the commercial
> sector AND in US government communications.

Heil can't help it that you were born before he was. Heil will likely
outlive you and will be in HF radio communications long after you're
gone. Heil worked in a number of radio services and doesn't feel that
Anderson's boasts mean anything in a newsgroup concerned with amateur
radio. Anderson hasn't obtained an amateur radio license nor is he
likely to do so.

> Further, I've
> learned much more about radio physics, being able to design and
> build as well as operate. I have no "envy" of some minority
> amateurs after a professional career in radio-electronics covering
> a wider portion of the EM spectrum than is allocated to US amateurs..

Then you'll be a smash in the rec.radio.professional.entire.spectrum
newsgroup and the talk of all of your fellows. We minority amateurs
will continue doing what it is that minority amateurs do.

> >Absurd. Those who are active on the bands must deal with newcomers
> >entering amateur radio regularly. Any change introduced to amateur
> >radio effects all those who are regular participants.
>
> The FCC is not tasked with satisfying just the "regular participants."
> The FCC is tasked with regulating US civil radio for ALL citizens.

Really?

> If socialized medicine ever advances in the USA, I'm sure some
> medical-psychiatric help can be obtained to soothe the injured
> feelings of "regular participants" in US amateur radio. :-)

This isn't a medical newsgroup, Len. It deals with amateur radio and
you earlier claim STILL doesn't wash. It isn't factual.

> >> So...these PCTA want radio regulations to preserve their "feelings?"
> >
> >Straw man alert! No one has ever made such a claim.
>
> Strawman allegation Burn Down! Heil just did with a tale of having
> to coexist regularly with beginners. :-)

Heil made no claim about "feelings" at all. Heil made a statement
refuting your claim about "preserving feelings".

> >> Codify law to favor these old-timers and forget about the future and
> >> all the amateurs who may want to enter later? Of course. They

> >> want it all as they made it, nothing else.
> >
> >Straw man number two! The regs have been changed. Newcomers can't
> >possibly do it as I have done it.
>
> ...and the bitterness of burning straw persists... :-)
>
> Poor baby.

> >others? I've also asked you what constitutes "overly-proud". Have you
> >had time to jin together some coherent answers?
>
> The British colloquialism is "gen," not "jin." :-)

Grab your encyclopedia and look it up. I'm not British.

> Yes, I've GENerated a number of coherent statements preceding this.

Where can we find them. They certainly haven't been posted here. What constitutes "overly-proud"?

> So have others on the NCTA side. The PCTAs still resort to the
> personal denigration when attempting to argue their case. Status
> quo in this newsgroup-cum-chatroom-for-regulars. :-)

What would you call it when you begin with the "Herr Robust", "Sieg Heil" or "poor baby" comments? Why do you repeatedly chastise others for what you do on a regular basis?

> than any other citizen.

I wasn't writing of a law or regulation. I was writing of a fellow who
is not a radio amateur but who is obsessed in an overly-personal way,
with the regulaton of amateur radio in the United States.

> No one in the FCC is required to be a "participant" in any radio
> service they regulate in the USA.

Ah, but you aren't with the FCC and you don't regulate amateur radio.
If you don't regulate and you don't participate, what is any of it to
you?

> ANY "non-participant" of ANY radio service is permitted to
> comment freely and openly to the FCC about that or any other
> radio service. If you look closely at the law you will find that
> is legally true.

You've commented. Now what? Am I supposed to embrace your views? The
FCC has to listen to you. I don't.

> "Participation" in a radio service does not yield automatic
> "authority" over others in regards to the law on radio
> regulations.

Just because I know more about something based on the experience which comes from long participation doesn't mean folks aren't free to seek the advice of an absolute outsider with no experience in amateur radio. You may find a couple of people who think seeking your advice would be productive.

> >You think that all others should believe as you do.
>

> reasonably free from totalitarian rule by insiders for their own
> personal benefit. I believe in free speech and free assembly,
> not in private enclaves where only "ruling parties" may run
> things at the expense of others.

I don't know anyone who believes in other than what you've written above.
Do you believe that those who regulate amateur radio in the U.S. are involved in totalitarian rule for their own benefit? I don't. Do you believe that amateur radio operators in the U.S. are a ruling party? I don't. That's where your stuff begins to come apart.

> I do NOT believe in letting certain power-seekers and loud-
> mouths and bullies push others around as if they "owned"
> authority because they decided they were "chief."

You're a loud mouth and a bully and you're attempting to tell us how amateur radio should be in the United States. You don't own authority and you aren't chief.

> Obviously Heil does not believe in the things I do...

I don't live in California. I'm not a Democrat and I'm not a liberal. I have decades more experience as a radio amateur than you. I've never ever attempted to tell someone who has experience in an avocation how that avocation should be regulated or run when I am not a participant in that avocation. You are correct. I certainly don't believe as you do.

> >You come out scratching and clawing on a personal
> >level against those who threaten your self-perception.
>
> I will come out with virtual thermonuclear warfare against
> those who assume authority without being granted such
> authority. That is FAR more than "scratching and
> clawing" as you inelegantly phrased it.

Thermonuclear warfare? More like "fart and fall". Tell us about the authority over amateur radio you're attempting to grant yourself.

> I am not the one obsessed with trying to shove others
> around just because others have differing opinions. You
> DO that verbally, targeting ONLY those whose opinions
> differ from yours.

Do you target people who are in agreement with you? You aren't involved in amateur radio yet you want amateur radio to be shaped according to your desires. If that isn't obsessing, I don't know what is.

January 19, 2000, right here on rrap. 'Twas in a post with his usual longwinded
insults and biased analysis of amateurs and amateur radio.

Like the following:

>> >> Such free speech has been met by some, like yourself, trying to
>> >> control content through ill-mannered sarcasm and general
>> >> bullying whenever opinions are contrary to your personal views.
>> >
>> >Uhhhh, Len? That sounds awfully much like what it is you do here.
>>
>> It's exactly what Mr. Anderson does here. Note that no examples of this
>> behavior by you (K8MN) are provided.

There was a guy named Mark Morgan who used to post enormous amounts of verbiage
here. Claimed to have a 236 IQ and some sort of severe language disability.
Grammar, punctuation and spelling were so bad they made 'ULX's stuff look like
Shakespeare. I useta respond to Mark's stuff as a test of my ability to dig a
message out of the noise.

When asked why he didn't use the spellchecker built into his newsgroup reader,
he said it "slowed him down too much". IOW, he wasn't going to allow himself to
be limited by things like spelling and grammar.

Mr. Anderson does a similar thing. But instead of spelling and grammar, Mr. A
isn't going to allow himself to be limited by things like facts, logic, or the
idea that he should practice what he preaches.

>> >> >> This newsgroup already exists, is public access, unmoderated. No

Are you kidding? Even a bleak like Kim could do that. Anyone who can
read and write and had any useful memory at all can.

Well, you've only got half the idea. My callsign is hard to work with also. The items you mention above are all quite workable but would more be called a nickname than a take-off on a callsign. See, ya gotta work the W5 part in, but if I can't think of anything you sure as all hell can't. Your creativity doesn't go much past "See Dick run" and you think everyone's talking about a dick.

So the founder of "No-Code International" is a software developer. Interesting.
Isn't developing software the act of coding?

1210. MV Oak conspiracy

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-19 02:59:39 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <3DD9A8F6.80107@adelphia.net>
Source record: 55306

After exhaustive research, I have come to the conclusion that the MV Oak does not exist. Indeed, the whole MV Oak saga is a great conspiracy perpetrated on an unwitting public by the ARRL and it's CW'philic lackey's.

Evidence #1

http://www.boatnerd.com/pictures/salty/saltynop.htm#o

Note that if you take the boat's vital statistics as outlined in the web page, and add all the numbers, you will get 32,604. You see?... No? Well, if you divide 32,604 by 48.954954954954954954954954955 you will come up with the number 666! Coincidence? I think not!

Note that the ship's former name was "Verdin". This is an old Norwegian term for Morse Code rules. Yet another coincidence? I think not!

Now we move to more evidence:

http://www.geocities.com/~sandusky99/98jan9.htm

> The Oak (Bahamian-registry 13,000-gt, 21,951-dwt,
> 155.22-meter/509.25-foot motor bulk carrier built in 1981, operated by
>

Whoa! something's very wrong here. If we compare this to the preceding link, we see that in their unbridled hubris, the conspiricists made an important error. 509.25 feet? HA!, the other page has it listed at 509 feet. I want to know what became of the other three inches. This one omission throws into doubt all of the CW'phillic conspiricist's claims.

Now for the most damaging evidence of all.

http://www.wellandcanal.ca/salties/o/oak/oak.htm

Here we have the presumed Oak sailing on the Welland Canal. HA! This was a specially built stage in the Arizona Desert, where the waters of the Colorado river were diverted at great expense to make a faux Welland canal, at the same time, conveniently destroying the evidence of the faked moon landing site. Also note the lack of shadows on the water. If you'll also notice, near the stern of the ship, there is an amateur trying in vain to repair the hf antenna (he's the little dot) Which clearly indicates that there was no HF capability for the Oak regardless of where it was at. Finally, notice that the name OAK has been plainly faked on the Bow.

In conclusion, it is apparent that the conspiracist's have plainly tried to foist a huge canard on us. I rest my case.

See, there is that status thing again. So what does my license class or my code speed have to do with it? You base everything on obtaining some kind of status. You must have a really pathetic life. You can only build yourself up by attempting to look down at others.

>
> >Your are correct, I am not your equal, I am far superior to

See, there is that status superior stuff again, you put so much into this status thing. Why would I be a better ham than you if I were on the DXCC honor roll? Why does working all countries make anyone a better ham that anyone else? Even if I had DXCC you would not see me on the honor roll anyway, what would that really prove other than I spent countless hours hovered in front of the rig just to make a 5 second contact with some ham in some "rare" country. I really have better things to do with my life.

Here's why it didn't happen. The current litter of Hams is fighting progress by holding on to CW and imposing it on new members.

"xxx Amateur Radio Society" Clubs are really operator clubs. I try to bring up such projects at club meetings. There is NO interest. Clubs tend to emphacize contests, morse, antennas, and politics. The clubs tend to attract the same types of people. The people that are interested in homebrewing,radio direction finding, practical projects, etc see that that's not HAM Radio, and dont join.

Neither, Jim.

One can look at the concept of the CW test as a liberal idea, because it involves the guvmint interfering in your life by putting up a roadblock to your access to the HF bands. It is a liberal concept because it is regulating, and good conservatives hate any non-market based regulation.

Now we can also look at the concept of the CW test as a conservative idea. This test is one that has been around a long time, and is status quo. It is also a litmus test of a person's desire to achieve it, which is a plus among the conservatives.

I just don't think that the political trash has a place in the argument, because whichever side you are on, the whole ham radio concept is a government administrated one in which some of the more conservative members are complaining about the de-regulation of the bands (and face it, that is exactly what it is) and the more liberal members are asking for (gasp)less regulation. And as much as I try, I have trouble imagining the transgendered as having much concern at all in what is going on in the ARS, Unless of course they are Hams, and then that makes them Hams.

Go figure! Mike KB3EIA -

Robert:

I believe Kim has a Pre-Restructuring Tech Plus ticket, so she could fairly easily upgrade to General or Extra simply by taking the requisite written exams. If she wishes to do so, I have absolutely nothing against it. Of course, she'll be just another dumbed-down Nickle General or Extra, but her operating privileges would be legitimate. Why would it "bust [my] b*lls" if Kim upgraded? Oh, I get it -- you're adding yourself to the list of male rrap participants who are so infatuated with Kim and her big W5-tits that you'll say anything to get on her good side! Well, I hope it works out for you...

Of course he is! A *very* light one, post-restructuring. He already said that in an oblique way, and for certain he acts just as we all have come to expect one to act.

The pleasure was all mine! Congratulations on your clean sweep!
W3DOV, the Dover Amateur Radio Club, consists of myself, Mark
Holloway KE3UY, Jim Laws, K0UWO, and other local hams who
wish to contest with us. We had 212 QSO's and 65 sections for
a total of about 27.5 kilopoints. Operation was at Mark's new QTH
and antennas are all attic dipoles in his antenna-restricted
development. Next year we'll do better even if we have to resort
to a Field Day-like portable operation to get to use some real
antennas. Just hope it isn't raining all contest weekend like it was
this time, or we'll be back at Mark's.

Again, thanks for the QSO!

Jim, N2EY, axed:

>>There's something odd here, though. I've been called a "liberal" or even just a "lib" for daring to support code testing, incentive licensing, meaningful written tests and operating skills - even though I can't recall ever naming a political party affiliation or candidate preference here.

OTOH, it's clear that nobody familiar with your views would call you a "liberal" except as a joke - or insult.

Yet our views on keeping or abolishing code testing, incentive licensing, meaningful written tests and operating skills are virtually identical.

So is code testing a "liberal" concept or a "conservative" one? How about the concept of eliminating code testing?

73 de Jim, N2EY<<

Jim:

I've given the above question a lot of thought myself. I'd have to say that trying to preserve code testing and other meaningful amateur radio licensing requirements would, in current political phraseology, have to be considered a "conservative" point of view. The "liberals" are those who want something for nothing, and who seek recourse from the government to solve their personal problems, like not being able to get high-power HF phone privileges because they, for whatever reasons, can't crack the code testing requirement. In the Pre-Restructuring Era, this was mainly accomplished by promiscuous use of medical waivers, brought to us courtesy of one whining ham in Pennsylvania, a King in a Middle East political hotbed, and an obliging U.S. State Dept. which gave said king carte blanche to meddle in U.S. domestic affairs. What SHOULD have happened was to send JY1 a polite letter thanking him for his concern in such a matter, and then very calculatedly taking absolutely no action on his proposal while he was still alive. That'll teach 'em to try to run our country! Well, that didn't happen, and as much as I would have preferred that to have occurred during the Clinton administration, we have no one to blame but President Bush (#41). I've never considered Bush 41 to be a fully signed-on conservative, and this just adds to my assessment of him. I like to think that Bush 43 wouldn't have allowed such a thing to happen.

Code testing itself is a "conservative" concept because it "conserves," or, more correctly, preserves, a valuable communications

skill within the amateur radio community. As a conservative, I
believe that government has a right and necessity to regulate
the use of valuable, finite resources, such as the RF spectrum, and
getting the most out of our amateur radio spectrum allocations
out of necessity requires radio amateurs to possess, in sufficient
numbers, Morse/CW proficiency at a useful level, in order to
exploit the benefits and advantages of this mode under conditions
in which it would permit communications to continue to take place
where other modes would fail. In a perfect world, the FCC would
have adopted a more compromising licensing scheme, such as
the one I suggested in my comments on the Restructuring NPRM,
as opposed to simply reducing code testing to the present
insignificant level which barely satisfies the existing international
treaty requirements. The FCC commissioners who tossed out the
higher speed code testing requirements were mostly liberal, if
not downright socialist, Clinton administration appointees.

Libertarians like Cecil would take credit for the Restructuring
disaster under the notion that less government is better. I don't
necessarily disagree with that concept, but I don't think it applies
in this case. I'm for less government, and more realistic
application of government authority, but I'm not an anarchist.
I could go on and on, but I think you get the idea.

Well, there you have it. Why should he 'look down' on you or anyone
else? Could it be because you 'got yours' via the cheap and easy route?
By implication that's exactly what you have just said- that he is
'looking down' on you, therefore there must be a reason. That's it.

Word on the street is that Herb, ex- KV4FZ, will make an appearence on 14.313 USB at high noon Eastern time.

A "Roll Call" will kick things off. Controlled by KT4TR and the Colonel will be the first check-in!

Word also has it that Hal Turner, will be making a guest appearrence on 14.313 too. He will be checking in with the help of control op, Kevin Strom, WB4AIO.

Bro. Norton and Bro. Bottle will be tuning in their R-75's. for the play by play.

Will KK4TL be tuning in from his 'frigerator box?

Profit Stair told me so......

The elimination of the code test would be a republican value based upon the concept that political party likes is limited government intervention in our lives as possible, as a licensing process is one more level of governmental intervention in our lives. Therefore code testing as well as other forms of licensure (other that a tax revenue source) would most likely be a democrat related issue.

(Neither a dem or a rep...)

Why should he be heard from? Most of his postings were made before the restructuring in an effort to change the status quo and build support for what he believed in. After his objective was achieved, there was no longer any need for him to try to change the minds of people that are stuck in the past.

Cost is almost nil because most of the work still has to be done to put the
info on the webpage.

Good point, Dave.

There are many avocations that employ class structure. Most are much
more complex than the three tiers of the ARS. Is an avocation required
to be so simple that anyone can participate without learning anything?
This does not take into account human nature, at least the part of it
dealing with challenges and betterment.

>>>Wait a minute, Len. You have decided that amateur radio should adopt

Yeah, what's with the minimum age anywhoo? If a young person can pass
the tests, they should be able to enjoy the priveleges.

>> YOU have decided to attempt, by whatever means, to suppress

> you didn't believe he was strong enough to bear up under heavy debate
> tactics.

That is certainly a mistaken perception on someones part. I've always said one should never mistake good manners for weakness. It's a fundamental part of getting things done. All the inflammatory rhetoric that is almost certainly designed to anger people accomplishes virtually nothing of use.

Which leads one to the conclusion that such statements, however valid the initial premise is, are put forth only to tweak the noses of the statements intended target and to invoke retort. If the argument is then being lost, one can then cry about having their rights abridged or not tolerating other opinions.

Of course, there is a contradiction there, where one is being asked to tolerate intolerance! 8^)

<some more snippage>

Not allowing a person who *can* pass the tests to become a Ham is about the most exclusionary, elitist idea I've seen yet.

This invitation to get professional help keeps resurfacing. And here is the crux of the issue. We are apparently assumed by some to have mental problems, and invited to get professional help, and yet some feel compelled to argue with the crazy guys and gals to try to convince them of their errors?

This is tormenting the poor crazy people, and is mean-spirited to say the least. My momma taught me not to pick on people less fortunate than myself.

The only purpost this contest served was to tie-up
the HF bands with more poor amateur practice
and hams running excessive power and qrm'ing
everything and everyone. (and all to get their call listed
in a QST contest log - what a waste of time and energy)

When they expire unused after a year, they're as irrelevant as "Yeah,
go ahead" permission.
```

No but you're proved a fool for making such an assertion instead of looking it up for yourself. Google has it all, but you've got to get off your ass and do some searching-just like you had to get off your ass if you ever learned the Morse code. But you don't *really* want to know. Same difference.

It took me 17 minutes to pass the Extra written test on qrz.com, but half
of that was waiting for web pages to load, so it could be done in 8 mins
with paper or a faster connection. But I guesstimated all the calculations
in my head. If it was for real I probably would have tried to be more
acccurate. I think that someone who hadn't already passed it would take
longer for that reason, so that makes it all rather artificial. N3KIP

Yes its very easy to do in 8 minutes, I even handed him back the Blank sheet of paper, I didnt need the paper, it was that easy. I didnt worry about being accurate, because it wasnt my goal to get 100% on the Extra. My goal was to collect the $250.00. And I knew I could pass it. What I should have done was shoot for 5 Minutes, but at the time I wasnt trying for speed.

"Thousand Points of Light", as it were. But he was VP for Reagan for 8
years prior to becoming President! He was also instrumental in getting
rid of marine use of Morse on MF - no more radio officers on oil
tankers, dontcha know.

> I like to think that Bush 43
> wouldn't have allowed such a thing to happen.

Me, too, but we will probably see the complete end of Morse testing
next year, on his watch, and under the guidance of Mr. Powell as head
of FCC.

The concept of "less government is better" is just as invalid as its
socialist opposite of "government needs to do everything for
everybody". Both are oversimplifications that lead to disaster.

The problem with the "conservative" and "liberal" labels is that they
are caricatures rather than meaningful descriptions. I much prefer the
terms "responsible" and "irresponsible". Example: All law-abiding
Americans have the right to amateur radio licenses - IF they
demonstrate the requisite level of responsibility to use a limited,
shared resource.

> Bill Sohl...

I cannot recall a single post by Bill Sohl, K2UNK, promising any sort of extra growth, new technology, or other pie-in-the-sky benefit from reducing or eliminating code testing. Nor can I recall any instances of him saying that procodetest folks were "luddites", "nazis", "stuck in the past", "jackbooted thugs", "elitist" or had a "I had to do it so you have to do it too" attitude.

Not one, and I've read many, many of them.

Bill's anticodetest argument is simple and elegant, and boils down to a few basic concepts (remember, these are Bill's arguments, NOT mine):

1) All laws and government rules and regulations must constantly re-justify their existence by showing that bad things would happen without said laws and government rules/regs.

2) The justifications for code testing (in his opinion) have decreased to the point that they no longer support the existence of the tests.

3) Thus, code testing should be reduced as much as possible under existing constraints (S25.5), and eliminated if/when those constraints disappear.

Simple, concise and clear. And it all comes down to an OPINION question. I disagree comnpletely with Bill's opinion, but I respect him nonetheless.

Other folks may have made all sorts of wild claims, promises and predictions re code testing and its abolition, but not K2UNK. Not that I've ever seen, anyway.

Of course not. Reagan promised to get government off our backs and
out of our pockets. He would not want to continue irrelevant and
superfluous testing requirements for government licenses.

The "liberals"
> are those who want something for nothing, and who seek recourse
> from the government to solve their personal problems, like not being
> able to get high-power HF phone privileges because they, for whatever
> reasons, can't crack the code testing requirement.

... the personal problem of not having anyone to talk to because the mode cannot attract enough usage based upon its own merits. Or the personal problem of your self-worth being diminished because I don't have to do something superfluous, irrelevant, or stupid as you have done. Hazing comes to mind.

In the Pre-
> Restructuring Era, this was mainly accomplished by promiscuous

Did you see the Alpha advertisement in the December QST for the "What Hath God Wrought?" 1841 replica telegraph key? You can have one, too, for just $129.

As a conservative, I
> believe that government has a right and necessity to regulate
> the use of valuable, finite resources, such as the RF spectrum, and
> getting the most out of

Your plan is sure to squeeze the most (people) OUT of the ARS. Some efficiency. You don't see anymore job ads wanting Morse Operators anymore.

our amateur radio spectrum allocations
> out of necessity requires radio amateurs to possess, in sufficient
> numbers, Morse/CW proficiency at a useful level, in order to
> exploit the benefits and advantages of this mode under conditions
> in which it would permit communications to continue to take place

And CW never fails? If the government wanted to support the continued use of Morse Code, they wouldn't have pulled the plug on the Coast Guard.

In a perfect world, the FCC would
> have adopted a more compromising licensing scheme, such as
> the one I suggested in my comments on the Restructuring NPRM,
> as opposed to simply reducing code testing to the present
> insignificant level which barely satisfies the existing international

Yet many people struggle learning what you call the "insignificant"
level. Perhaps that has something to do with why the governemnt has
abandoned the code. It just isn't worth it.

The FCC commissioners who tossed out the
> higher speed code testing requirements were mostly liberal, if
> not downright socialist, Clinton administration appointees.

You don't see that Powell kid bringing it back, do you?

> Libertarians like Cecil

who quit NCI

would take credit for the Restructuring

Yep, a $29 sound card put a lot of codesters out of business.

Dan is right. What the heck? You don't
need no "steenkin badges" on ham radio anymore! (do you ??)
Some guy who calls himself "orange blossom" checks into
the 75 Meter 3.860 Militia Net at 8:00
PM EST every night. Guy don't have any ham call
and is welcome checked in by the NCS "no-problemo".
[O.B. is allegedly with the Michigan Militia
out of Dexter Mich. Mr. FCC] Guess what also..
..they've now established 7.275 mHz SSB
(40m) as the "24/7 Michigan Militia callup freq"
or so said someone up there last nite. No license
needed too! real nice.

(So much for Mr Hollingsworth's "stellar"
enforcement record eh folks....?? Better send
in Homeland Security pronto Uncle Sam...)

You really have a problem with reading comprehension don't you
dickieboy.
As I stated earlier, I obtained my Novice ticket in 1961, there
was no cheap and easy route. How long have you been a ham dickie?
For my upgrades I sat in front of an FCC examiner at the FCC field
office in Dallas, Texas for my code test and written exams. Same
thing for my FCC First Class commercial ticket. So there you have
it, you and newbie Larry look down upon anyone else who obtains a
license today because they did not get it the way you did. More
ego status crap. The only reason you and newbie Larry look down
upon any one else is to boost your giant egos and a feeble attempt
to make yourselves feel somehow important.

There you're wrong again dickieboy, I hold an Advanced class, you see I don't feel it necessary to get an Extra just to feel superior as you and newbie Larry do. I never said in *any* way that I was an Extra. Why would you are newbie Larry even ask what class license I hold if this eqo status thing wasn't so important to you?

Carl told us again and again that amateur radio "needed to be dragged into the 21st century" and that "better modes and modulations" were the solution to all our problems. I recall clearly a debate about how DSSS could allegedly be used on our HF ham bands without serious problems - even though it was shown clearly that a single QRP DSSS station would raise everyone's noise floor for miles around.

He said we should be building a sort of wireless internet system on the ham bands, with gateways to the wired internet, and that this would bring all sorts of folks to ham radio. When asked how the interconnections would filter out commercial and porno-type content, he had a few vague ideas but nothing practical.

We got all sorts of lectures about how hams needed to get some eval boards and start homebrewing the next generation of digital radio communications, DSP, PICs, PLGAs and lots of other stuff. Some folks actually got lectured on being too cheap and/or lazy to have "real jobs" and elaborate basement workshops.

Also a grab-bag of epithets like "olde fartz", "luddites" and "FUD". Popular amateur pursuits like contesting and DXing were putdown by Carl as "electronic paintball wars" and our regulations as "dinosaur dung encrusted". Vanity callsigns and such were "juvenile" and "elitist" - he'd stick with his 2x3 forever. "No setasides for legacy modes" was another slogan, fighting the idea of setting aside 300 kHz on the low end of 2 meters for weaksignal/narrowband modes.

"Better Modes And Modulations" - remember that catchphrase?
>
> And we haven't heard squat from him since.

Yes, we have. Soon after getting his upgrade (a year and a half after April 15, 2000) he was here on rrap for a bit. Told us all how he got 100% on the Extra exam (just like Bruce).

What was surreal was the next part. He also bragged about how he was up to 70+ DXCC countries, using just a 100 W class transceiver

(manufactured) and a simple antenna (also manufactured). It took several direct questions to drag out the fact that his DXCC electronic paintball trophies were all gathered using SSB voice, a legacy mode from the 1920s. Soon after, he sported a new 2x1 vanity callsign.

Now, there's nothing wrong with chasing DX, getting the countries total up, working SSB, using manufactured gear or vanity calls. He sure sounded like he was having lots of fun, and that's a good thing. But it sure was weird reading all that stuff after years and years of long, angry, abusive lectures about how we hams must do just the opposite.

Thats no surprise, Carl could have cared less about Ham Radio, his only interest was getting on HF SSB.

Incorrect. Had you done any computer program coding you would
have found out that "coding" describes that activity, is widely used
by computer program writers, both professional and amateur.

Feel free to go to the ACM and correct them if you wish. :-)

If you wish a definition of "civility" in discussion about entering US amateur radio as being total, absolute, irrevocable biased towards your own personal desires, wishes, opinions, and parroting what a membership organization has led you to believe, then your question is correct as stated.

Unfortunately, such a definition is not a definition but rather a declaration. A rather biased, totalitarian declaration of "do it your way." Shrug.

>7037 CW 9 PM EST Wednesdays

Feel free to go over to a semi-private venue to "discuss" anything. Perhaps you can work out a system where the only ones who can get into US amateur radio are those who are already in US amateur radio. Same logic. :-)

>
>I wasn't writing of a law or regulation. I was writing of a fellow who
>is not a radio amateur but who is obsessed in an overly-personal way,
>with the regulaton of amateur radio in the United States.

I'm just writing about the US radio regulations covering GETTING
INTO US amateur radio.

That does not relate directly to those ALREADY IN US amateur
radio, does it?

Tsk, tsk, I point out some facts...which are seemingly opposite
to Heil's viewpoints and suddenly such opposition becomes
obsessive! :-)

Isn't Heil rather obsessed with the preoccupation of declarations
against certain individuals in this newsgroup who are not in
agreement with him?

>> No one in the FCC is required to be a "participant" in any radio
>> service they regulate in the USA.
>
>Ah, but you aren't with the FCC and you don't regulate amateur radio.
>If you don't regulate and you don't participate, what is any of it to
>you?

Heil is not in the FCC. Heil has NO legal, moral, or ethical
"authority" over anyone else to challenge or control the motives
of any other citizen of the USA as to what anyone, to any
degree, is "interested" in anything. Yet Heil continues to dwell
on "participation" as a prerequisite for ANY discussion of US
amateur radio regulations. The preoccupation seems obsessive.

>You've commented. Now what? Am I supposed to embrace your views? The
>FCC has to listen to you. I don't.

Heil is free to overlook anything and not reply. Heil is already IN
US amateur radio and regulations concerning getting INTO US
amateur radio do not apply directly to him. Heil seems obsessed
with controlling the motives, intentions, interests of others to fit

some predefined model of behavior. Why? The simplest act is
simply to ignore any protests but Heil will not...he must continue
to dwell on certain specifics. The conclusion would be that Heil
isn't really interested in discussing regulations that affect future
US radio amateurs, only in preserving his own status, and, most
of all, to attempt "winning" an argument any way he can.

>I don't know anyone who believes in other than what you've written
>above.
>Do you believe that those who regulate amateur radio in the U.S. are
>involved in totalitarian rule for their own benefit? I don't.

Heil's own commentary in message content is contrary to that
disavowal.

>You're a loud mouth and a bully and you're attempting to tell us how
>amateur radio should be in the United States. You don't own authority
>and you aren't chief.

It would seem that Heil doesn't accept ANYTHING other than his
own views...all must accept his viewpoints and have "discussions"
wherein they all agree with what he says...or they are accused of
being "loud mouths, bullying, and attempting to tell us [Heil] what
to do." QED. :-)

>I don't live in California. I'm not a Democrat and I'm not a liberal.

Irrelevant. Geo-political situations are not of concern in this
"discussion."

>I have decades more experience as a radio amateur than you.

Irrelevant again. US radio regulations' discussion or commentary
do not concern "decades of experience" except for the fanciful
notion that such long experience is a "qualifier."

On another irrelevant personal note, I have at least a decade or
more in radio experience in both government and commercial
radio than Heil. Shrug.

>I've never
>ever attempted to tell someone who has experience in an avocation how
>that avocation should be regulated or run when I am not a participant in
>that avocation.

Heil is a Janus, then. He has commented on the FCC's actions,
rulings, declarations. The FCC is NOT a "participant" in US amateur
radio yet it is THE agency regulating ALL of US civil radio.

>Do you target people who are in agreement with you? You aren't involved
>in amateur radio yet you want amateur radio to be shaped according to
>your desires. If that isn't obsessing, I don't know what is.

Heil does not realize what his own behavior is like to others.

But, NOBODY can tell him what to do, can they? :-)

1294. Re: An Invitation to CW Radiosport

Source record: 55480

In article <3DD98F09.CCE43E00@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Straw man alert! a) You do not determine what regs are outdated and
>outmoded.

I and others have long since determined that morse code testing,
as well as the mode itself, are outdated and outmoded.

If they were not outdated and outmoded, they would still be used
in other radio services. They are not so used in relatively newer
radio services which were created without thought of using morse
code modes...or their use in a few radio services is limited to
automatic ID or a few maritime installations. All except amateur
radio service.

>b) The regs are not now, nor have they been for a long, long time as
>they were when I obtained licensing.

Test element 1 remains in current US amateur radio regulations
for licensing having below-30-MHz privileges. That is International
Morse Code cognition. Same as back in 1912 and the first US
radio regulating agency.

>How is my persistence any different than your persistence, Len? Your
>statements are simply ridiculous.

Views in opposition to Heil's are often called by him as "ridiculous."
:-)

>Yet I'll be in contact with those who obtain their licenses sans morse
>testing. An unavoidable shift in skills and attitude will take place. I
>have every right to concern over these issues.

Everyone has the freedom to "be concerned." If Heil wishes to
have law added to ease his "concern," he is free to write his
elected government official and request legislative release from
"concern" worry.

>What outdated and outmoded regulations, Leonard--the ones which you
>decide ar such?

Myself and thousands upon thousands of others have come to
an opinion that morse code testing is both outdated and outmoded.
Heil has judged such opinions as not allowable for discussion by
his commentary.

>Since you are a non-participant, I'd say you've
>overly-personalized and obsessed over amateur radio regulations which
>have no bearing on you whatever.

Heil doesn't understand that regulations on license testing will
affect NON-participants more than participants. By dwelling on
the "only-participants-can-talk-about-it-others-shut-up" supposed
qualifier, he demonstrates a clear desire to have regulations His
way. He is already IN amateur radio so he thinks regulations
concerning getting into amateur radio do not apply to "non-
participants." Ergo, his notion is that no one can get into
amateur radio unless they are already in amateur radio. :-)

>I've been pointing out how silly some of your ideas seem to me. I love
>the part about a minimum age for licensees. Any change in an avocation
>effects all who partcipate. Those changes don't have anything to do
>with non-participants.

A reiteration of Heil's notion that one can only get into amateur
radio unless they are already in amateur radio. "Non-participants"
do not apply... :-)

>and YOU have decided to attempt, by whatever means to change U.S.
>Amateur radio regs despite the fact that you are not a licensee (nor
>have you even attempted to become a licensee).

So...more of the same circular logic.

Heil is not legally, morally, or ethically authorized to limit, control,
or moderate anything about anyone...and he continues to act
ex-officio in that "capacity" and then feigns "concern" about
changes he, personally, does not like. :-)

>Your comments have been made. I've pointed out that no one is likely to
>adopt the views of a non-participant on how amateur radio should be.

Irrelevant. Heil is not a "participant" in anyone else's life, yet
he attempts to control others. He has no authority to do so.
If Heil does not like certain viewpoints, he has the freedom to
ignore them or simply overlook them. Unfortunately, he does
not and dwells or is preoccupied with denigrating comments
to those whose opinions differ from his.

>Yep. That was my point. You asked if I was the arbiter and I reflected
>your stuff back to you.

You have assumed such a role of arbiter. See the necessity
for "being a participant in order to become a participant" illogic
you have repeated. :-)

>You are not in the FCC, are not an authorized
>official appointed by them, nor do you have any special position over
>and above any other citizen. Why should I fold up my opinions and
>support yours?

"Your opinion" seems to concentrate on the exclusivity of US
regulations on getting into amateur radio ONLY applying to
to those already in amateur radio. Besides being illogical, it
demonstrates a control syndrome, a manifesting of the human
territorial imperative ("turf" in common vernacular) wherein only
certain individuals "rule." US radio regulations apply to ALL
US citizens whether they are in that radio service or not.

>One cannot be a participant without first "getting in".

...and one cannot get in without already being in? :-)

>Why should anyone then accept your views over mine? After all, I have
>nearly forty years experience as a radio amateur. You have,
>well...none.

I have well over forty years experience in radio...military, commercial,
government radio...largely as a professional. Heil's view is that this
is "not applicable" to anything involving amateur radio. Heil's view
is that no one can get into amateur radio without already being in
amateur radio. :-)

>Right. In your world, only others "demand". You "point out". You can
>declare regulation as "outmoded/outdated" with a wave of your magic
>wand.

Thousands upon thousands of "wands" have already been waved
by others. Once upon a time, a mere 90 years ago, the ONLY
practical means of radio communications was by on-off keying
mode for ALL radio services. Ninety years later there are only two
US radio services which require separate manual testing of morse
code proficiency and one of those does not require morse-tested
operator licenses for below-30-MHz communication privileges.
MOST of the radio services in US civil radio do NOT require ANY
morse code proficiency because it was never considered viable
for those radio services.

But, US amateur radio is "different." Despite one of the definitions
of US amateur radio saying it is for "improving the radio art," a
still-required test for a license having below-30-MHz privileges is
manual morse code proficiency. Yes, it is the consideration of
thousands upon thousands of both "participants" and "non-
participants" that morse code testing is both OUTDATED and
OUTMODED. Live with it.

>saying that they hadn't had a Morse distress call in years, so I'm
>having difficulty seeing why this would have been made up to fool
>anyone about the current importance of Morse to maritime safety. What
>would be the point?

My only "point" was in the coincidences of when the event happened, principally on New Year's Eve and on the last day of worldwide agreed 500 KHz International Distress Frequency using International Morse Code. That incident was used as a prime example of morse code viability by PCTAs in here.

No one seems to have noted the date coincidences. New Year's Eve is a traditional time of merriment in any country using the "western" calendar system. Newspapers and wire services have low-ranking staffers on that night's duty and such journalists are prone to inventing stories at that time; this has been documented in personal biographies of prominent journalists and columnists (the late Jack Smith of L.A. Times for one such). That it happened on the night before the international cut-over to GMDSS seemed to be a "convenient" coincidence for the purposes of boosting amateur radio use of morse code.

Note the commentary in this newsgroup on other threads. Pointing out a remarkable time-date coincidence becomes a serio-comic diatribe of "conspiracy" according to some PCTAs. Exaggeration for emotional effect.

As far as GMDSS is concerned, the PCTA keep using a single derogatory statement against it from a retired mariner and avowed morseman, yet GMDSS was internationally conceived and implemented by the maritime community, based on testing and operation by non-morsemen. No comment on that. If it is about morse, the PCTA will exemplify a single statement by a morse-man at the exclusion of anything else.

I don't have anything to prove. Clay made the original statement about the
"NCI creeps" promising a massive increase in the number of hams, so the
burden of proof is on him.

Gee Dick, you have erupted with some pretty serious politically incorrect
stuff here. It appears you share some views with Joe Walsh, WB6ACU
"Ordinary, Average Ham (and Rock Legend)". Did you catch his interview in
the November 2002 CQ Mag? This is a very interesting story, but too spicy
for QST, I'm sure. In fact, I am surprised that W5YI allowed it to be
published. I'll bet Richard and Gail get some heat over this!
".................
<lots of good stuff snipped>
CQ: When did you upgrade to Extra class?
JW: Not too long ago--about a year ago. I wanted to get it before they
changed all the rules. I wanted to take the actual exam and do the code.
CQ: How do you feel about the demise of Morse code ....and the
now-minimal requirements for amateur radio licensing?
JW: Oh, I think it is obsolete and [its demise] was
inevitable..............I think any amateur who's worth a damn knows Morse
code. I don't have much use for people who don't even attempt to learn
it........
<lots more good stuff snipped>.."

So shame on you. You're obviously a demented Luddite in the extreme fringes
of Amateur Radio.;-)

> amateur radio. Same logic.

You have been invited to participate via the stations of more than one
person here, and you ahve no license.

Furtehrmore, the "venue" of the radiowaves is much closer to "public" than
"private" viv-a-vis the Internet when one considers what it costs to get to the
point of being able to access the internet.

A few days study and $300 well-spent dollars will put a person on the air.
It takes that $300 twice over, a subscription to an ISP and a telephone line
(at $30/mo service charge) to get to this forum.

Amateur Radio is far more "public" than "private".

Wanna join?

I have to ask, Len. Is this another example of you taking the high road
and only debating removal of morse testing in a civil manner? :)

Aren't you the fellow who frequently dismisses the comments of others
with a brusque "Irrelevant"?

Dave K8MN

Maybe you didn't get the word. Amateur radio is open to all and even
the unlicensed may listen. For some of the unlicensed, listening would
be a new experience.

Well goodie for you but there you go with this status thing again
newbie larryboy. Just what is so important about having an Extra
class license? I have no need for an Extra class as I have access
to all the frequencies that I need with the Advanced, unlike you,
a newbie, and dickieboy I don't need it for status to make myself
feel somehow important.
I had a long time friend that was a blind ham, if he were alive
today he would have been a ham for 70 years this year. Bill was
the hams ham, he taught Novice classes, participated in RACES,
worked DX, fixed his own ham gear, climbed his tower to install
antennas and much more. He never belittled anyone, especially
about some silly class of license, he was a real gentleman that
make you and dickieboy look like snot nosed school yard bullies.
He held one of those 'piddling little Advanced, class' license you
hold in such disrespect, was a General class for many years. Even
though he could copy 35-40 wpm with no problem, remembering it all
without writing it down, and could have probably aced the Extra.
So even with your Extra class status you could not have stood in
his shadow with his 'piddling little Advanced class license'.
I am glad that in my ham career most of the hams I have known come
closer to being like my friend Bill than such as the likes of
newbie you and dickieboy. Thank goodness there are more like that
than like you.
Too bad you and dickieboy have such pathetic lives that you cannot

accept people for what they are and see their potential, instead
of what you think they should be, which of course is never up to
your lofty false standards.

>
> I'm not necessarily saying that you need an Extra-class license to
> be a full-fledged ham,

Really? It would be hard to tell from the things you post on the
group.
What do you mean by 'not necessarily', you don't think that any
one who holds a ham ticket to be a full-fledged ham.

> but if you're going to be telling other hams
> what kind of hams they are, you'd better be one if THEY are!

> You
> and your piddling little Advanced class ticket don't have a leg to
> stand on to tell Dick and me what kind of hams we are!

Piddling little Advance class eh, see there you go with this
status and ego thing again you can only make yourself feel good by
belittling others. See newbie, you think that any ham that is not
an Extra and operates cw is just not as superior as your are. Your
are so hung up on your status you really look silly, newbie.
As far as telling someone what kind of ham they are, just holding
an Extra class ticket certainly does not prevent one from being a
jackass and a twit, you and dickieboy are positive proof of that.

I recall clearly a debate about how >DSSS could allegedly be used on our HF ham bands without serious >problems - even though it was shown clearly that a single QRP DSSS >station would raise everyone's noise floor for miles around.

Not a good "recall." Spread-spectrum does not involve just direct-sequencing. It can frequency hop. The US military does this in the standard small-unit radio for all branches, operational for over 13 years now. With a power output adjustment it is "QRP" capable. :-)

In about two years of past posting, "a single QRP DSSS station would raise noise floors" only under certain conditions, but that would only bother the narrowbanders using older modes and modulations.

>He said we should be building a sort of wireless internet system on >the ham bands, with gateways to the wired internet, and that this >would bring all sorts of folks to ham radio. When asked how the >interconnections would filter out commercial and porno-type content, >he had a few vague ideas but nothing practical.

Sorry, but you misdirect greatly there. "Internet-like" was meant ONLY in the TCP/IP *type* of coding. It was never meant as a carbon-copy of present day Internet as you claim above.

>We got all sorts of lectures about how hams needed to get some eval >boards and start homebrewing the next generation of digital radio

>communications, DSP, PICs, PLGAs and lots of other stuff. Some folks
>actually got lectured on being too cheap and/or lazy to have "real
>jobs" and elaborate basement workshops.

Some examples were presented on actually building and
experimenting with new hardware and software. That's hardly
"lecturing" is it? Do you want to keep US amateur radio on a
two-transistor "Tuna Tin" technology diet in this new
millennium?

>Also a grab-bag of epithets like "olde fartz", "luddites" and "FUD".
>Popular amateur pursuits like contesting and DXing were putdown by
>Carl as "electronic paintball wars" and our regulations as "dinosaur
>dung encrusted".

...and the PCTA and pro-code side is "blameless" and "never calls
the other side names?!?" They most certainly do and did, well
before NPRM 98-143 was made public by the FCC.

>Vanity callsigns and such were "juvenile" and
>"elitist" - he'd stick with his 2x3 forever. "No setasides for legacy
>modes" was another slogan, fighting the idea of setting aside 300 kHz
>on the low end of 2 meters for weaksignal/narrowband modes.

You seem to be making a BIG THING out of a few mentions,
exhibiting overmuch spite about PAST newsgroup content.

>Now, there's nothing wrong with chasing DX, getting the countries
>total up, working SSB, using manufactured gear or vanity calls. He
>sure sounded like he was having lots of fun, and that's a good thing.
>But it sure was weird reading all that stuff after years and years of
>long, angry, abusive lectures about how we hams must do just the
>opposite.

It's still "very weird" reading Mr. N2EY's brag about "only using
own-designed and built" ham rigs and then finding him praising
a KIT that he assembled, designed by others, parts fabricated
by others. Yup, yup, he ONLY works the bands with rigs he
designed himself. :-)

If you have some sort of "dispute" with others NOT in this chatroom,
try taking it up with them directly, in another venue. Keeping up
this spiteful sort of wailing about the past and your poor, injured
sensibilities from message injury is a tiresome thing to see.

The future begins right after now. It cannot be accessed in Google.

>class license I hold if this eqo status thing wasn't so important
>to you?

I'm going to come right out and say why. I think anyone who could
be a ham for over 40 years and NOT be an Extra is proving precisely
how lazy and unmotivated he is. Getting my Extra was probably the
easiest thing I've done in my entire life -- and I got mine in the
Pre-Restructuring, testing-before-the-FCC-examiner Era. It took me
16 months to go from nothing to Extra -- after having spent the
previous 14 years whining about the code testing requirements!

I'm not necessarily saying that you need an Extra-class license to
be a full-fledged ham, but if you're going to be telling other hams
what kind of hams they are, you'd better be one if THEY are! You
and your piddling little Advanced class ticket don't have a leg to
stand on to tell Dick and me what kind of hams we are!

Hey Bert, 'deed it does go a long way. You hear lots of real QRP there,
too.

Getting on fine here, how's hamming these days?

Did you see the new QRP CW transceiver from Dave Benson at Small Wonder
Labs called the Rock Mite? He also has a new 10 watt PEP SSB (a nd of
course digital) rig in the works. He's making them for a developing
Asian country and wants comments as to whether or not there'd be a
market for it to ham radio. I've already told him YES! Surf on over to

<http://www.smallwonderlabs.com>

and check all this out, and email him your comments. He's a fine fella
and a large part of what keeps this hobby moving. A skillful high-tech
engineer, he is a supporter and proponent of CW, as can be seen by his
products. I have no idea whether he is for or against code testing, I
didn't ask and couldn't care less. I gotta save that for all the heavy
duty blametossing bitchers like Brain Burke.

Dick

Talk about unadulterated garbage. Just what makes you
the arbiter of someone being lazy because they decided
to NOT pursue an Extra...or an Advanced..or whatever.

YOU are entitled to your narrowminded opinion, but
that's it. Others such as myself will call you on that
opinion.

Thanks Jim, you saved me typing it again.
We have agreed on many points to disagree and
discuss, argue. debate in a rational fashion.
I too repect you for your views and commitment.

Thanks again.

They say if you're going to tell one, to tell a big one. Next time
say you did it in under a minute, and the prize was $1,000, still
without studying and still without error. It really doesn't matter at
this point.

Yep, someday when the FCC changes the rules again we might not be
scrambling to recover our Morse Code CSCE, we might be scrambling to
recover which version of the Extra we passed.

Yeh, CSCEs are irrelevant. So is the Section News, apparently.

I sometimes casually contest and once in awhile (Field Day and Sweepstakes)
participate fully. There a lot of things one can learn during the contest.
Here's some of the things that one might learn.

1. How to handle poor band conditions.
2. How to handle crowded band conditions.
3. How and when to use the fancy features on the radio. And why the radio
has them.
4. Personal experience of the unique propagation characteristics of each
band.
5. What the bands can do when propagation is good.

There's probably other things one can learn.

>of what you think they should be, which of course is never up to
>your lofty false standards.

What makes you think that Dick and I lead "pathetic lives?" My life
is a very full and happy one, and I enjoy the hobby of ham radio
with many local hams who know me, and my opinions, very well
indeed -- but they don't have to call me names because of them!

>> I'm not necessarily saying that you need an Extra-class license to

Len, if my interests can be called "overly-obsessed" by you, you
interests can certainly seem "overly-obsessed" to me. You, after all,
were the individual who brought up the unsubstantiated term. For a guy
who claims to debate, you don't seem to know much about it.

> Isn't Heil rather obsessed with the preoccupation of declarations

> amateur radio regulations. The preoccupation seems obsessive.

Yes, but I didn't bring up the issue of no one at FCC being required to be a ham. They regulate radio and are paid to do so. They don't have to be radio amateurs. On the other hand, I AM a radio amateur. You CLAIM a decades-old interest in amatuer radio but you've never quite gotten around to actually becoming a ham. That makes you quite a unique fellow.

> >You've commented. Now what? Am I supposed to embrace your views? The
> >FCC has to listen to you. I don't.
>
> Heil is free to overlook anything and not reply.

Heil is equally free not to overlook and to reply to his heart's content.

> Heil is already IN
> US amateur radio and regulations concerning getting INTO US
> amateur radio do not apply directly to him.

Incorrect. Every new individual who gets on the air has the potential to effect my amateur radio operations. By the way, "Heil" is already in amateur radio in Guinea-Bissau, Sierra Leone, Botswana, Tanzania and Finland--not just IN U.S. amateur radio.

> Heil seems obsessed
> with controlling the motives, intentions, interests of others to fit
> some predefined model of behavior. Why?

I don't control your motives. I suspect them.
I don't control your intentions. I counter them.
I don't control your interests. I disagree with them.

> The simplest act is
> simply to ignore any protests but Heil will not...he must continue
> to dwell on certain specifics.

"Heil" isn't bound to ignore your stuff. You're correct. Heil will not.
There's much in those specifics. Did you intend to just sweep 'em under the rug?

> The conclusion would be that Heil
> isn't really interested in discussing regulations that affect future
> US radio amateurs, only in preserving his own status, and, most
> of all, to attempt "winning" an argument any way he can.

That'd be another false conclusion you've come to there, Leonard old boy.

> >I don't know anyone who believes in other than what you've written
> >above.
> >Do you believe that those who regulate amateur radio in the U.S. are
> >involved in totalitarian rule for their own benefit? I don't.
>
> Heil's own commentary in message content is contrary to that
> disavowal.

How so? Where have I ever accused those regulating amateur radio of totalitarian rule for their own benefit? I asked you the question. I not that you did not provide an answer.

> >You're a loud mouth and a bully and you're attempting to tell us how
> >amateur radio should be in the United States. You don't own authority
> >and you aren't chief.

> It would seem that Heil doesn't accept ANYTHING other than his
> own views...all must accept his viewpoints and have "discussions"
> wherein they all agree with what he says...or they are accused of
> being "loud mouths, bullying, and attempting to tell us [Heil] what
> to do." QED. :-)

You mean that I won't change my views to those you hold. Right-o, Leonard!
I wasn't writing, by the way, about "others". I was writing about you in particular.

>
> >I don't live in California. I'm not a Democrat and I'm not a liberal.
>
> Irrelevant. Geo-political situations are not of concern in this
> "discussion."

Why not--because you've declared them out of bounds? I agreed with you, Len. I don't share your beliefs.

> >I have decades more experience as a radio amateur than you.
>
> Irrelevant again. US radio regulations' discussion or commentary
> do not concern "decades of experience" except for the fanciful
> notion that such long experience is a "qualifier."

It is as relevant as your snipped comments regarding your I've-got-more-experience-in-radio-and-electronics-than-you comment which preceded my response. It would seem to be more relevant in this amateur radio venue.

> On another irrelevant personal note, I have at least a decade or
> more in radio experience in both government and commercial
> radio than Heil. Shrug.

That's the kind of comment to which I reponded. I'll likely catch up at some point, Len.

> >I've never
> >ever attempted to tell someone who has experience in an avocation how
> >that avocation should be regulated or run when I am not a participant in
> >that avocation.

> radio yet it is THE agency regulating ALL of US civil radio.

Do me the favor of reading what I wrote. Now read what you wrote. Don't you feel like a fool when your rant doesn't reflect what was written?

> >Do you target people who are in agreement with you? You aren't involved
> >in amateur radio yet you want amateur radio to be shaped according to
> >your desires. If that isn't obsessing, I don't know what is.
>
> Heil does not realize what his own behavior is like to others.

Oh! Stop, Len! You're cracking me up!!!! You could do stand up.

> But, NOBODY can tell him what to do, can they? :-)

Just the missus since my retirement.

Amateur radio is not other radio services. Morse is still widely used
in amateur radio. This newsgroup is about amateur radio. This
newsgroup deals with amateur radio.

> >b) The regs are not now, nor have they been for a long, long time as

I'll write it again. Maybe you can have someone explain it to you: The
regs are not now, nor have they been for a long, long time as they were
when I obtained licensing.

> >How is my persistence any different than your persistence, Len? Your
> >statements are simply ridiculous.
>
> Views in opposition to Heil's are often called by him as "ridiculous."
> :-)

Yes, they are--especially when they are things like instituting a
minimum age requirement in amateur radio. Now, what I asked was: How is
my persistence any different than you persistence?

> >Yet I'll be in contact with those who obtain their licenses sans morse

"Concern" worry? What in the world are you babbling about?

> >What outdated and outmoded regulations, Leonard--the ones which you

That must have been some standards committee meeting! When were you placed in charge of standards? Where are the invisible thousands of others? You've commented. The thousands of others will have to speak for themselves.

> >Since you are a non-participant, I'd say you've
> >overly-personalized and obsessed over amateur radio regulations which
> >have no bearing on you whatever.
>
> Heil doesn't understand that regulations on license testing will
> affect NON-participants more than participants.

Heil doesn't understand that because is isn't the case. Any change in the regs effects those already licensed as much as those who enter amateur radio in the future.

> By dwelling on
> the "only-participants-can-talk-about-it-others-shut-up" supposed
> qualifier, he demonstrates a clear desire to have regulations His
> way.

You are a non-participant. You've talked. I don't agree with you. I'd much rather have the regs my way than your way. Do you feel differently?

> He is already IN amateur radio so he thinks regulations
> concerning getting into amateur radio do not apply to "non-
> participants." Ergo, his notion is that no one can get into
> amateur radio unless they are already in amateur radio. :-)

Electro-grin discounted. I have not made such a statement.

> >I've been pointing out how silly some of your ideas seem to me. I love
> >the part about a minimum age for licensees. Any change in an avocation
> >effects all who partcipate. Those changes don't have anything to do

> do not apply... :-)

I have not made such a statement. Care to produce a quote?

> >and YOU have decided to attempt, by whatever means to change U.S.
> >Amateur radio regs despite the fact that you are not a licensee (nor
> >have you even attempted to become a licensee).
>
> So...more of the same circular logic.

Well, if your statement was a falsehood the first and second times, it
is likely to be a falsehood this time.

> Heil is not legally, morally, or ethically authorized to limit, control,
> or moderate anything about anyone...and he continues to act
> ex-officio in that "capacity" and then feigns "concern" about
> changes he, personally, does not like. :-)

"Heil" is legally permitted to express his views and to think them
superior to anything you have come up with. My concern is not feigned.
My disagreement is not feigned. My laughter at your shennanigans is not
feigned. When you write of you and your few thousand followers, are you
addressing changes in amateur radio licensing which you personally want
to see made?

> >Your comments have been made. I've pointed out that no one is likely to
> >adopt the views of a non-participant on how amateur radio should be.
>

Let stop right here for clarification. In what way am I attempting to
control you, Leonard?

> He has no authority to do so.
> If Heil does not like certain viewpoints, he has the freedom to
> ignore them or simply overlook them.

He also has the freedom not to overlook or ignore them. Look, Len are
you attempting to control me?

> Unfortunately, he does not

Unfortunate for you, I guess...

> and dwells or is preoccupied with denigrating comments
> to those whose opinions differ from his.

Am I "overly-preoccupied" or just "preoccupied"? Most folks don't see
any denigrating comments from me. It is usually the folks who
themselves make denigrating comments who are on the receiving end. Are

you one of those folks?

> >Yep. That was my point. You asked if I was the arbiter and I reflected
> >your stuff back to you.
>

That's as untrue now as the first time you wrote it. I don't know if it
is a deliberate attempt at falsehood on your part but it would seem so.

> >You are not in the FCC, are not an authorized

> US citizens whether they are in that radio service or not.

No, that has never been my opinion. I've pointed out that it is quite
peculiar for someone outside any avocation to attempt to change the
regulations for that avocation. The words you've used like
"overly-obsessed", "preoccupied" and such certainly apply to such a
person. How much of a control syndrome would it be for a person in no
way involved in amateur radio and who is not paid to regulate amateur
radio to lobby for a minimum age requirement in order to gain entry?
>
> >One cannot be a participant without first "getting in".
>
> ...and one cannot get in without already being in? :-)

Plenty of folks get in. YOU haven't gotten in.

Irrelevant (to use your method).

> Heil's view is that this
> is "not applicable" to anything involving amateur radio.

Nope. Heil's view is that it is not amateur radio.

> Heil's view
> is that no one can get into amateur radio without already being in
> amateur radio. :-)

> for those radio services.

Let's not worry about one of them. The only one we need concern
ourselves with here is the amateur service and what is viable and in
daily use in the amateur service.

> But, US amateur radio is "different." Despite one of the definitions
> of US amateur radio saying it is for "improving the radio art," a
> still-required test for a license having below-30-MHz privileges is

> participants" that morse code testing is both OUTDATED and
> OUTMODED. Live with it.

You have a mouse in your pocket? Your invisible pals will have to speak
for themselves. Morse testing is not outdated or outmoded because you
say so and a minimum age requirement for amateur radio is an absurd idea
not championed by anyone but you. What are you, some kind of a control
freak?

Hello, all.

I've been lurking in this group for the past month or so and have found some of the threads (and the opinions they espouse) to be interesting, to say the least.

I've a very new ham. I knew essentially nothing about this hobby 3 months ago. I just got my license on 10/2/02, and have not had much of a chance to really delve into anything ham-related yet. I've got a small handheld radio I bought for myself as a gift for passing the first exam. So far, I've mostly listened in to see how things work. I am planning on buying a multiband HF rig in the near future, after I pass the CW requirements.

I've done lots of reading about amateur radio in a very short amount of time, and I've been an avid lurker to the "pro code / no code" battles (not just here, but elsewhere, too). Given that I am so new to CW, I am officially staying neutral on that subject as of now. I am learning CW, but slowly. Working 50+ hour weeks and having other responsibilities kinda puts CW study low on the priority list. I have given myself a 6 month deadline, then I'll take the CW exam if I feel I'm ready at that point. Okay, enough of the background.

One thing that has me slightly dismayed since I started lurking here is this attitude that seems to pervade the contributions of *some* long-time amateur radio people (certainly not *all*) that today's licensing tests basically mean nothing, and that those who take them are necessarily inferior operators as a result of the "dumbed-down" requirements for passing today's licensing exams. I'd like to ask the folks that feel this way one non-rhetorical question. If you really believe that new hams are inferior to the established ones as a result of today's tests being less difficult than when you took them, is this the new ham's fault?

If we neophytes decide that we want to get a ticket, we are told we need to take an exam. So, we buy the books we are told to buy and we study (hopefully), we take the test and (hopefully) we pass it. While today's tests may seem laughably easy to some of you, they are the reality of what we new hams are given to work with- through no fault of our own. I was not privy to the wrangling that went on over at the FCC headquarters when licensing exams were being restructured, nor do I know who all asked for the restructuring in the first place.

At the time I took the Tech test, I had no knowledge that the previous entry-level exams for an amateur radio license were so much harder than the one I took. I still have a paper from the FCC that shows I hold an amateur radio license (50 MHz and above- for now). I have no sense of relativity when it comes to the test I took and the tests that you established amateurs

took so many years ago. Even if I *wanted* to take a harder test to upgrade my license, just to prove that I could pass such an exam, it wouldn't be given to me now... so why should it matter?

I decided to try amateur radio because some of my friends were into it, and I thought I'd see what they were so excited about. Turns out that I like it, yet from hearing the less-than-complementary things that some people have to say about us "No-Code Techs", you'd think that we really weren't wanted anywhere in the hobby. I really hope that this is not the opinion of most established hams. Many of us current newbies will go on to upgrade our licenses- but even then, we may be looked down upon by the old timers because we will take "dumbed-down" upgrade exams, too. How can we win?

I really hope that the majority of long-time radio amateurs don't believe that we newly-licensed radio amateurs are inferior just because the tests we took to get our tickets may not have been as hard as the ones they took.

Personally, I believe the proof of an operator's skill is shown through actual on-air practice, and not necessarily from what you had to digest to pass a test. There is *always* the opportunity to continue our skills and educational levels way past what we knew when first coming into the hobby (like getting a driver's license- do you really know everything about driving after a 6-hour behind the wheel course?). In fact, the little bit of theory I learned while studying for the Tech test got me interested enough in electronics that I went and bought a SW receiver kit, just so I could learn how to put together a radio from scratch.

Many of my ham friends have serious backgrounds in electronics, computers and a variety of engineering fields. But not all of us hams have degrees in any of these subjects (or even a degree at all) so we will have to learn the technical theory on the upgrade exams without the benefit of any previous educational background. Even if we upgrade to General or "nickel Extra" in the future, what control do we new folks now have over present licensing requirements? While I have no idea what the, say, 1965 entry-level exams were like, they probably were harder than today's Technician exams. But there are new modes for us modern hams to use that weren't in existence 20 or even 10 years ago, too, so the opportunities for continued learning seem endless. To me, this is an "on-the-job" hobby, and the test you take to enter it is just that- entry level. One can continue on as far as they wish to go in the hobby. For some, the hobby may even spur them on to pursue a new career.

This group seems to see a lot of postings on the CW requirements (yeah, I know, duh). As I said, I'm not taking a stand one way or another on CW right now- I'm still too new to CW and have not been on the HF bands so that I can be an adequate judge of its value. Can you established hams convey something beyond a contempt for the present requirements for getting a ticket and teach me what's great about this hobby? I would really like to learn!

I am (presently) a No-Code Technician. I had nothing to do with the easing of the FCC's licensing requirements, the "dumbing down" of the exam contents or anything related to them. I took the Technician exam as it is now, and I

don't know anything about "how it used to be" years ago- other than that it was probably more technically challenging than today's exam, and that the licensing structure was quite different from the way it is now. These facts have little relevance to what I, as a new ham, would like to learn about this hobby today.

I would like to know what you established amateurs think about the newcomers to this hobby. What is your advice, what makes you most happy about the hobby? What keeps you coming back for more? Again, I'm not looking for a valuation on the merits (or lack of) in CW testing; I'm just curious as to how we newcomers to the hobby are viewed by the cross-section of established amateurs who post here. I don't belong to a radio club yet, and have not interacted a whole lot with other hams since I am so new. I am not a whiner, and I am not adverse to CW or any other amateur radio modes, so please do not anticipate me as such. I am asking for input, because I'd really like to know more about the various things this hobby has to offer, but I'd really like to absorb the same without wearing the label "No-Code Tech" with the requisite shaming and baggage that *some* established amateurs seem to want to tack onto us beginners.

Thanks.

Jackie

Yeah.... but political references don't necessary have direct ties to ham radio as ham radio is one thing and politics is a different field. Unfortunately the politics in ham radio itself do nothing but to work on destroying ham radio....

Hi Jackie, and welcome to ham radio. I wish for you the satisfying
longtime experience it has been for me. You have made it more than clear
in your post that you'll have no problems and that you're the sort of
ham that will be a credit to the service. That's very gratifying to see.

Not to worry- the beef most of us old codgers have is definitely not
with you and your friends, rather with a fairly small group of chronic
griper-duffers who seem to have convinced themselves that they were
smarter and more "right" than anyone else including the FCC on the
subject of code testing requirements. Mostly they procrastinated and
whined longterm, some for decades, rather than do a useful job of
handling code testing. There's really no credible excuse for their
behavior and any reasonable explanation would have to include personal
problems on their part.
The single factor that torqued me most and caused my participation in
these ongoing "conversations" was the accusation of some of them that
I was at fault for tolerating code testing (a hazing ritual to them).
Fact is, I ran a VE team for 8 years and tested hundreds of new hams of
all license classes into ham radio.
Most of those folks chose and choose to ignore the simple fact that

Morse code on radio is the most basic mode of radiocommunications to have existed to this time, and is useable anytime, anywhere - but only if the operator is capable of using it, which means learning it and developing at least minimal skill. If one can't develop the basic skill of communicating using Morse code at some useful level s/he cannot be said to be basically qualified in radiocommunications. It's that simple. Neither license class nor time of your testing have anything to do with it. You can't be faulted because of when you developed an interest in ham radio and became licensed. You do as we did, that is to meet the requirements in place at the time. Note that the whiners did not, rather they whine and procrastinate to this day.

Good luck with the study of Morse code. Remember that perseverance and staying with it will virtually guarantee your success. I have no doubt you'll have your General in less time than you think. Try to practice 20 minutes a day and you'll see.

It's rather interseting how things that disprove your rants are always
"irrelevent", isn't it, Lennie?

Sheesh. Grade school excuses.

I think this is the part where Mr. Finn is outraged (if only it didn't
depend on who posted it).

The FCC agrees with my point of view. You're the one out in the cold.

Where has Carl "proven his ability to lie"? Give us some examples. Posting things that are in error is not "lying" unless the poster knows they are in error and posts them to deceive the reader.

There are plenty of reasons that a ham could take a year to upgrade. Work and life responsibilities are one example. Having to study for the test is another. Simple ability to get to a VE session could delay things.

Heck, it took me two whole years (Aug 1968 to Aug 1970) to upgrade from Advanced to Extra.

How many years were you a ham before upgrading, Bruce?

Hi Dick,

I read a review of the SW Rock Mite in WorldRadio. It looks like a real winner. I find that I'm kinda getting into QRP. Ever since my trip to SA, I vowed that I'd be better prepared (As opposed to not at all, hi hi.) to be able to operate QRP CW abroad. Enter the Wilderness SST for 30m. ;-)

Perhaps the Rock Mite shall be my next build project? I'd like to get some "build" practice in before I tackle...you guessed it, an Elekraft K2/100. I want my soldering skills in top form and my patience factor high for that one. I love the thought of using a rig that's A) Supporting an American workforce. and B) Built by moir. Right now, I'm reading all the manuals, building tips, and other related articles on the Elekraft website. I want to be well familiar with this baby as it'll eventually become my main rig. Jim, N2EY, any comments and/or tips you might have would be greatly appreciated.

I'll be sending an e-mail in support of the new rig for the ARS. Take care, Dick and Jim. :-)

P.S. I'm in "kid on Christmas morning" mode, Mr. UPS man dropped off a Kent TP-1 yesterday. I'm using my new found spare time (3 day work-week) to practice with it. I seem to constantly send an extra dit. Oh well, practice, practice, and more practice...

Hi Jackie,

Your story is quite similar to my own. Long hours at work (Sure beats NOT
working!) and our newborn lad conspired to steal any spare time I had. I'd
given myself a year deadline to upgrade. That in itself is a good first step
and I note that, as an unbiased newbie, your decision to "just do it" is a
good harbinger of your success. 20 mins. to half-an-hour daily will yield
surprising results. I personally used the ARRL CD's and found them to be
quite good.
